

WR at CERN

Sunday 9 October 2022 14:30 (30 minutes)

Presentation of White Rabbit Timing (WRT), the new CERN project that aims at providing a generic event-based timing system covering both TAI and RF timebases.

WRT is planned for deployment in 2026 at CERN and with more than 2k nodes it will become the biggest WR installation of the laboratory.

The presentation will also provide an overview of some of the most important WR applications currently in operation at CERN.
