Use-cases

- As a user I want to restore my homedirectory as it was last month
 - No problem, we just fetch the desired snapshot from tape
- As a user I lost a file named my-precious-phd.txt
 - We look into S3 restic namespace: `restic find *my-precious-phd.txt*`
 - Uhm, it's not there, let's look into tape, **BUT the namespace is in TAPE!**
- As an operator we corrupted a file,
 - Idem as before, **namespace is in TAPE!**
