

Deployment, Adoption and Sustainability

Discussion notes

Discussion Notes

- Who is involved from the IRIS-HEP project and who is collaborating from other projects. Who are the key developers?
- Where each is on the path to deployment, including specific things we need to do (when relevant) to enable buy-in and adoption by the experiments, integration, etc. or by individual physicists/groups.
- How should the project be sustained? Does IRIS-HEP lead or fully own the projects? Have other stakeholders put enough effort into it to sustain it going forward? What needs to be done to transition it to a sustainable future. (In multiple scenarios for IRIS-HEP evolution in the coming years.)
