A new perspective on the flavor problem

Thursday, July 13, 2023 10:00 AM (30 minutes)

In the recent past, a substantial effort has been devoted into the understanding of lepton mixing and masses through flavour symmetries. While non-abelian discrete symmetries have been shown to explain the current pattern of neutrino mixings, no real illumination was sparked on the problem of flavor as we can reproduce in many different ways the observations. In this talk I will discuss the recent idea to employ Modular Symmetries to explain the observed pattern of neutrino masses and mixing.

Is this abstract from experiment?

No

Name of experiment and experimental site

N/A

Is the speaker for that presentation defined?

Yes

Details

Prof. Davide Meloni
davide.meloni@uniroma3.it (Roma Tre University)

Internet talk

Yes

Primary author: Prof. MELONI, Davide (Roma Tre University)

Presenter: Prof. MELONI, Davide (Roma Tre University)

Session Classification: High Energy Particle Physics

Track Classification: Main topics: High Energy Particle Physics
