XII International Conference on New Frontiers in Physics

Contribution ID: 41

Type: Talk

# Recent searches for new phenomena with the ATLAS detector

Tuesday, July 11, 2023 11:25 AM (25 minutes)

Many theories beyond the Standard Model (BSM) have been proposed to address several of the Standard Model shortcomings, such as the origin of dark matter and neutrino masses, the fine-tuning of the Higgs Boson mass, or the observed pattern of masses and mixing angles in the quark and lepton sectors. Many of these BSM extensions predict new particles or interactions directly accessible at the LHC. This talk will present some highlights on recent searches based on the the full Run 2 data collected by the ATLAS detector at the LHC with a centre-of-mass energy of 13 TeV. These include searches for leptoquarks and vector-like quarks, new high mass resonances and lepton flavour violating decays, dark matter searches in final states with large missing transverse momentum, as well as dark-sector searches using unconventional and long-lived particle signatures.

## Is this abstract from experiment?

Yes

#### Name of experiment and experimental site

ATLAS

### Is the speaker for that presentation defined?

No

### Details

N/A

#### Internet talk

Maybe

Primary author: PETERS, Krisztian (Deutsches Elektronen-Synchrotron (DE))
Co-author: RODRIGUEZ VERA, Ana Maria (York University (CA))
Presenter: RODRIGUEZ VERA, Ana Maria (York University (CA))
Session Classification: High Energy Particle Physics

Track Classification: Main topics: High Energy Particle Physics
