The research and development program at SNOLAB

Monday 28 August 2023 15:30 (30 minutes)

SNOLAB is Canada's deep underground laboratory, which has been fully operational since 2012. SNOLAB is operated 2 kilometers below ground in an active nickel mine, and the partnership with the local mine poses both opportunities and challenges. We will describe the operational capabilities, scientific program, and infrastructure challenges over the past decade and in the future.
