Fragmentation Function Measurements at Belle

Thursday, 30 March 2023 15:20 (20 minutes)

The Belle experiment at the asymmetric e^+e^- collider KEKB provides a large data set not only for the exploration of flavor physics but also for precision QCD studies. The clean initial state is particularly well suited to investigate the process of high-energetic partons fragmenting into final state hadrons. This talk will report the results of recent measurements sensitive to fragmentation functions from data collected by Belle.
