

DIS2023: XXX International Workshop on Deep-Inelastic Scattering and Related Subjects

Contribution ID: 152

Type: **Parallel talk**

A modern extraction of Sivers functions

Thursday, 30 March 2023 16:50 (20 minutes)

Artificial Neural Networks (ANNs) are quickly becoming an invaluable tool for information extraction and modeling. An unbiased ANN model can be built to make predictions of the Transverse Momentum-dependent Distributions (TMDs) based on global fit to Semi Inclusive Deep Inelastic Scattering (SIDIS) and Drell-Yan (DY) data. A preliminary analysis will be presented on the extraction of the Sivers functions using SIDIS and DY data and making predictions for future experiments with careful consideration of the bounds on the experimental errors, data sparsity, and complexity of phase space.

Submitted on behalf of a Collaboration?

No

Participate in poster competition?

No

Primary authors: Prof. KELLER, Dustin (University of Virginia); FERNANDO, Ishara (University of Virginia)

Presenter: FERNANDO, Ishara (University of Virginia)

Session Classification: WG5

Track Classification: WG5: Spin and 3D Structure
