Impacts of LHC Drell-Yan data in the CTEQ-TEA global fit

Tuesday 28 March 2023 17:10 (20 minutes)

The Drell-Yan lepton pair productions have been measured to an unprecedented precision level at the LHC. In companion, the theoretical calculations should reach the same level. However, a visible discrepancy among different next-to-next-to-leading order (NNLO) calculations has been discovered by both the CTEQ-TEA group and also by S. Alekhin *et al.* In this study, we carefully examine the difference among different NNLO codes, and also compare with the q_T resummation calculation. We explore the impacts of different calculations on the proton PDFs through the CTEQ-TEA global analysis, based on the latest Drell-Yan data from ATLAS, CMS, and LHCb groups.

Submitted on behalf of a Collaboration?

Yes

Participate in poster competition?

No

Primary author: XIE, Keping (University of Pittsburgh)

Co-authors: ABLAT, Alim (XinJiang University); YUAN, C.-P. (Michigan State University); SITIWALDI, Ibrahim (Xinjiang University); DULAT, Sayipjamal (XinJiang University)

Presenter: XIE, Keping (University of Pittsburgh)

Session Classification: WG3

Track Classification: WG3: Electroweak Physics and Beyond the Standard Model
