

Linac3, week 44 (31 Oct. - 7 Nov.)

Linac3, week 44 (31 Oct. - 7 Nov.)

Excellent week for Linac3 with a stable beam production of typically 35 uA out of the Linac.

- On Friday the two ovens in the source were re-filled with used lead, beam was back on Friday afternoon.
- Many thanks to Detlef who worked quite a bit outside working hours (Friday early morning, Friday evening and over the weekend) in order to do the oven refill and the necessary adjustments afterwards.
- Beam back in comparable intensity as last week and similar stability since Monday afternoon.
- Linac3 beam energy measurements have been performed daily.
