

Injector MDs week 48

A. Huschauer and B. Salvant

FOM 29.11.2022

Injector MDs

Last week

- Short parallel MDs in LEIR, PSB, PS, SPS
- Huge number of parallel MD requests this week and last week (in particular in PS)
- Long parallel MD in SPS:
 - Access in SPS on Wednesday morning to install sonometers and a scope (thanks a lot to the physics coordinator for allowing this, to the RF team for the super fast preparation and to SPS OP)
 - BCMS with lower bunch length to probe MKDH (following agreement of RP)
 - 8b4e for 1 hour on Friday to reproduce spikes
 - We accessed first in SPS yesterday morning to check the traces on the scope and make a test to see if the BIW could have perturbed the measurement (many thanks to Serge di Luca for allowing this!)

Next weeks

- We plan an IPP injector MD day beginning of next year.
