Automation of (Remediation) procedures for Batch Services in CERN with StackStorm

Tuesday, 1 November 2022 12:10 (25 minutes)

We will update on current status and activities in the CERN batch infrastructure, before concentrating on an introduction to remediation automation. Stackstorm is an open source product which has allowed us to automate activities such as health checks, alarm handling and provide enriched data to L2/L3 support for incidents. We will explain a little of the deployment, the architecture of the product and how it integrates with other products such as our Monitoring stack - Monit, our state manager - BrainSlug and our Cloud infrastructure.

Desired slot length

20

Speaker release

Yes

Presentation will be held...

in the conference venue

Primary author: SINGH, Ankur (CERN)

Presenter: SINGH, Ankur (CERN)

Session Classification: Computing and Batch Services

Track Classification: Computing & Batch Services
