DPM storage migration and EOL

Thursday 3 November 2022 10:20 (20 minutes)

DPM storage support is gradually declining and it will be discontinued in the coming years. Computing sites with this grid storage must decide what to use as their future storage technology and each migration strategy comes with different requirements for site administrator expertise, operational effort and expected downtime. We will describe the dCache migration tool distributed with the recent DPM which provides quick and easy way to make one-to-one grid storage replacement transparent to the client applications with less than a day downtime. Several production storage endpoints were already migrated to dCache using this method recently EGI started "DPM migration and decommission" GGUS campaign, because we are getting close to the DPM EOL.

Desired slot length

15min should be enough

Speaker release

Yes

Presentation will be held...

remotely
