# NSF AI Institute for Artificial Intelligence & Fundamental Interactions

*Advance physics knowledge—from the smallest building blocks of nature to the largest structures in the universe—and galvanize AI research innovation*

## AI Foundations:

Power of machine learning to process large, rich data sets

# Ai

# AI

## Physics Theory & Experiment:

First principles and best practices from fundamental interactions

# fi

- 26 faculty + 100+ (~20 FTEs supported) students and postdocs across MIT, Harvard, Northeastern, and Tufts
- Faculty by research home: 8 physics theory (2 particle, 2 lattice qcd, 1 astro/particle), 8 AI/EECS, 5 astro, and 5 experiment (2 LHC, 1 nu, 1 LIGO).
- Launched August 2020, started funding research January 2021, entering Year 3 of 5-year grant period (\$4 million/year)

## IAIFI Research

### Theoretical Physics

- First principles theory calculations
- Surrogate models

### Experimental Physics

- Data analysis and interpretation
- Embedding physical constraints to address symmetries and structures in the data

### Foundational AI

- Point clouds/geometric regularization
- Theory of deep learning

# Snapshot of IAIFI Activities

IAIFI Fellowship Program

Summer School & Workshop

Public Colloquia

Seminars & Journal Club

Community Building

Computing Resources

Industry Partnerships

Early Career and Equity Committee

Interdisciplinary PhD Program at MIT

MITx course

IAIFI Penthouse

IAIFI Affiliate Program

Public Engagement

# IAIFI and LHC Physics

In this domain, IAIFI is primarily focused on **knowledge/algorithm creation** with LHC motivations and applications—but also how solutions to LHC problems can be applied to other domains, both within and beyond the field of physics.

## LHCb

- Strong connections to LHCb Real-Time Analysis (RTA, formerly Trigger) Project.
- IAIFI-developed *Robust and Provably Monotonic Networks* architecture adopted for all major selections in Run 3, and being considered for many more tasks (NeurIPS Phys Sci 2021); runs in LHCb trigger and offline.
- LHCb-motivated architecture shown to beat state-of-the-art in justice, medicine, etc (ICLR main conf 2022).
- Related project by LHCb team (+Tegmark's group) highlighted in NeurIPS main conf 2022.

## CMS

- Strong connections to CMS Trigger Project, FastML, and A3D3.
- Strong connections between CMS and LIGO / Multi-Messenger Astrophysics.
- Example of intellectual development: *Quasi Anomalous Knowledge: Searching for new physics with embedded knowledge*, JHEP 2021.

## Theory/Pheno

- Energy Mover's Distance — Jet physics (SHAPER, NEEMo, both at NeurIPS Phys Sci 2022; Thaler + LHCb)
- Physics-Motivated Latent Spaces (Schwartz + CMS)

# Get involved with IAIFI

## IAIFI Talks

Colloquia and Seminars on the **2nd** and **4th Friday** (with some exceptions) of every month at **2:00 pm**

View schedule at <https://iaifi.org/events>

Watch on Zoom or come in person (Kolker Room)!

All previous colloquia also posted on YouTube:

<https://www.youtube.com/IAIFIIstituteforAIFundamentalInteractions>

<https://iaifi.org>

## Follow IAIFI

 <http://mailman.mit.edu/mailman/listinfo/iaifi-news> → Join mailing list

 [@iaifi\\_news](https://twitter.com/iaifi_news) → Follow on Twitter

 <https://www.linkedin.com/company/iaifi/> → Follow on LinkedIn

## Connect

**IAIFI Affiliates:** Senior researchers/faculty in the Boston area interested in the IAIFI mission

- Apply at <https://iaifi.org/affiliates>

**Friends of IAIFI:** Junior researchers/students in the Boston area interested in the IAIFI mission

- Apply at <https://iaifi.org/junior-interest>
