## Opportunities of Si-microstrip LGAD for next-generation Space detectors

*Tuesday 20 June 2023 13:15 (5 minutes)*

Low Gain Avalanche Diodes (LGAD) is a consolidated technology developed for particle detectors at colliders which allows for simultaneous and accurate time ( $<100$  ps) and position ( $<10$   $\mu\text{m}$ ) resolutions with segmented Si-pixel sensors. It is a candidate technology that could enable for the first time 4D tracking (position and time) in space using LGAD Si-microstrip tracking systems. The intrinsic gain of LGAD sensors may also allow to decrease the sensor thickness while achieving signal yields similar to those of Si-microstrips currently operated in Space.

In this contribution we discuss the possible applications and breakthrough opportunities in next generation large area cosmic ray detectors and sub-GeV gamma-ray detectors that could be enabled by LGAD Si-microstrip tracking detectors in Space. We propose the design of a cost-effective instrument demonstrator on a CubeSat platform to enable and qualify the operation of LGAD Si-microstrip detectors in Space.

### Eligibility for "Best presentation for young researcher" prize

**Authors:** BARBANERA, Mattia (Universita e INFN, Perugia (IT)); CAVAZZUTI, Elisabetta; DURANTI, Matteo (Universita e INFN, Perugia (IT)); FORMATO, Valerio; FORMATO, Valerio; FORMATO, Valerio (INFN - Sezione di Roma Tor Vergata); IONICA, Maria (INFN Perugia); OLIVA, Alberto (Universita e INFN, Bologna (IT)); VAGELLI, Valerio (Italian Space Agency (ASI) and INFN)

**Presenters:** DURANTI, Matteo (Universita e INFN, Perugia (IT)); VAGELLI, Valerio (Italian Space Agency (ASI) and INFN)

**Session Classification:** Poster session

**Track Classification:** Research and Development of novel approaches and instruments for particle and high-energy radiation measurements in space
