

Manasavee Lohvithee was a royal Thai government scholarship recipient for master and doctoral degrees. She earned her master degree in Physics from University of Surrey in 2014 and Ph.D. in electronics and electrical engineering from University of Bath, United Kingdom in April 2019. During her Ph.D, she worked on developing iterative algorithms to reconstruct X-ray CT measurements from limited projection data, in order to reduce radiation dose delivered to patients during medical diagnoses and radiation therapy.

Manasavee has been working as a lecturer in the department of Nuclear Engineering, Faculty of Engineering, Chulalongkorn University, Thailand since September 2019. Her research interests are in the area of Computed Tomography (CT) reconstruction algorithms, inverse problems, optimization methods, X-ray imaging and gamma-ray imaging.
