Type: **Presentation**

Visualize big data and create individual customer frontends

Wednesday 8 March 2023 14:00 (15 minutes)

One of the main challenges in dealing with large amounts of data is to find a **suitable presentation for the different target groups**. With the new module **External App**, SeaTable allows you to build individual frontends for the different stakeholders and process participants in no time.

In this way, processes can be streamlined and the transfer of information can be made more efficient.

In this presentation, I will introduce and explain the functions of the interface designer.
