

Strong solutions for the nonhomogeneous MHD equations in thin domains

Thursday, 12 January 2023 15:30 (1 hour)

We consider the nonhomogeneous incompressible Magnetohydrodynamic equations in a thin domain $\Omega := \mathbb{R}^2 \times (0, \varepsilon)$, with $\varepsilon \in (0, 1]$, and show the global existence of strong solutions. In addition, we prove that, as $\varepsilon \rightarrow 0^+$, the velocity and magnetic field tends to vanish away from the initial time.
