Searches for BSM resonances in ATLAS

Monday 8 May 2023 15:30 (15 minutes)

Many new physics models predict the existence of additional particles. This talk summarizes recent ATLAS searches for Beyond-the-Standard-Model heavy resonances which decay to pairs of bosons, heavy quarks, or leptons, using Run 2 data collected at the LHC. The experimental methods are explained, including the jet substructure techniques used in some searches to disentangle the hadronic decay products in highly boosted configurations.
