

Utrecht 22-nov-2023

I underestimated my availability to work on the “plan b” Concave mandrels. They are ready but need to test and make assesorys for gluing, don't think I manage before holidays.

I Do need some silicon for testing current I only have on L1 and some scraps

If I recall well ther are still 2 sets payed by utrecht at cern would it be possible to peel the blue tape and send to Utrecht ?

Current mandrels are used for bending alptides , we have a bachelor student working on electrical properties under bending

We did make quite some carbon fiber longerons and rings . Would it be an option to send some to CERN so They can be compared to the carbon foam longerons , handling strength and weight ? (Pieter Massimo ?)

So we are working on a BBM without holes in the carbon foam (see presentation Judith)

The Heaters by LTU are not being used at cern ? If so could you send them to utrecht we have only one set left.
