

Integrating a QC in a HPC environment

Quantum Computing and HPC in Italy and Europe

Daniele Ottaviani

CINECA HPC

- CINECA is a Consortium composed by 98 universities and public institutions
- Since its origins in 1969, Cineca offers **support to scientific research, public and industrial**, through supercomputing and the use of the most innovative computing systems based on state-of-the-art architectures and technologies.
- **HPC Italian National Center**, owner of the **4th most powerful supercomputer in the world** (Leonardo, 240 Petaflops peak performance)

Integration of a QC into a HPC environment

Integration of a QC into a HPC environment

Integration of a QC into a HPC environment

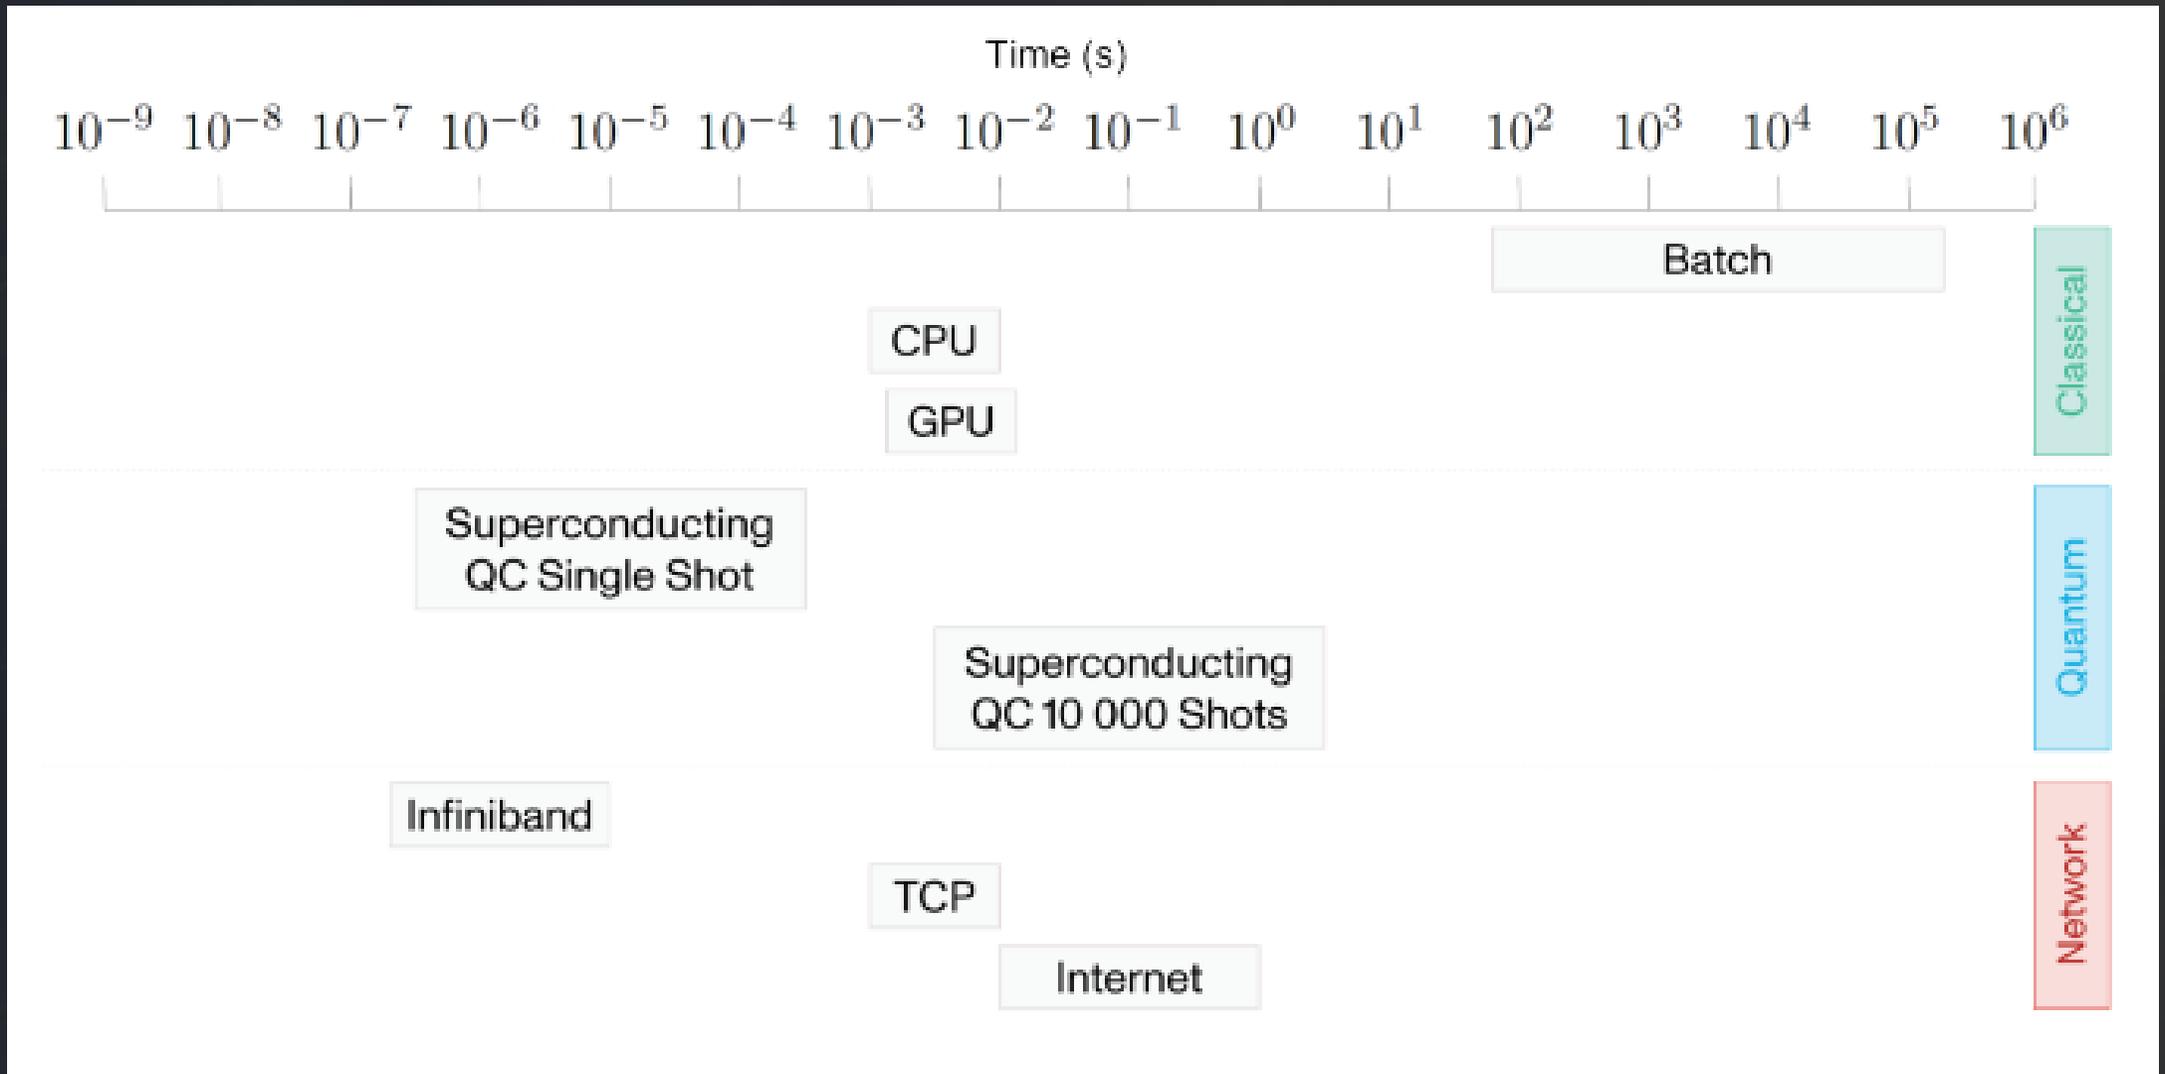

(a) usage of quantum in workflow

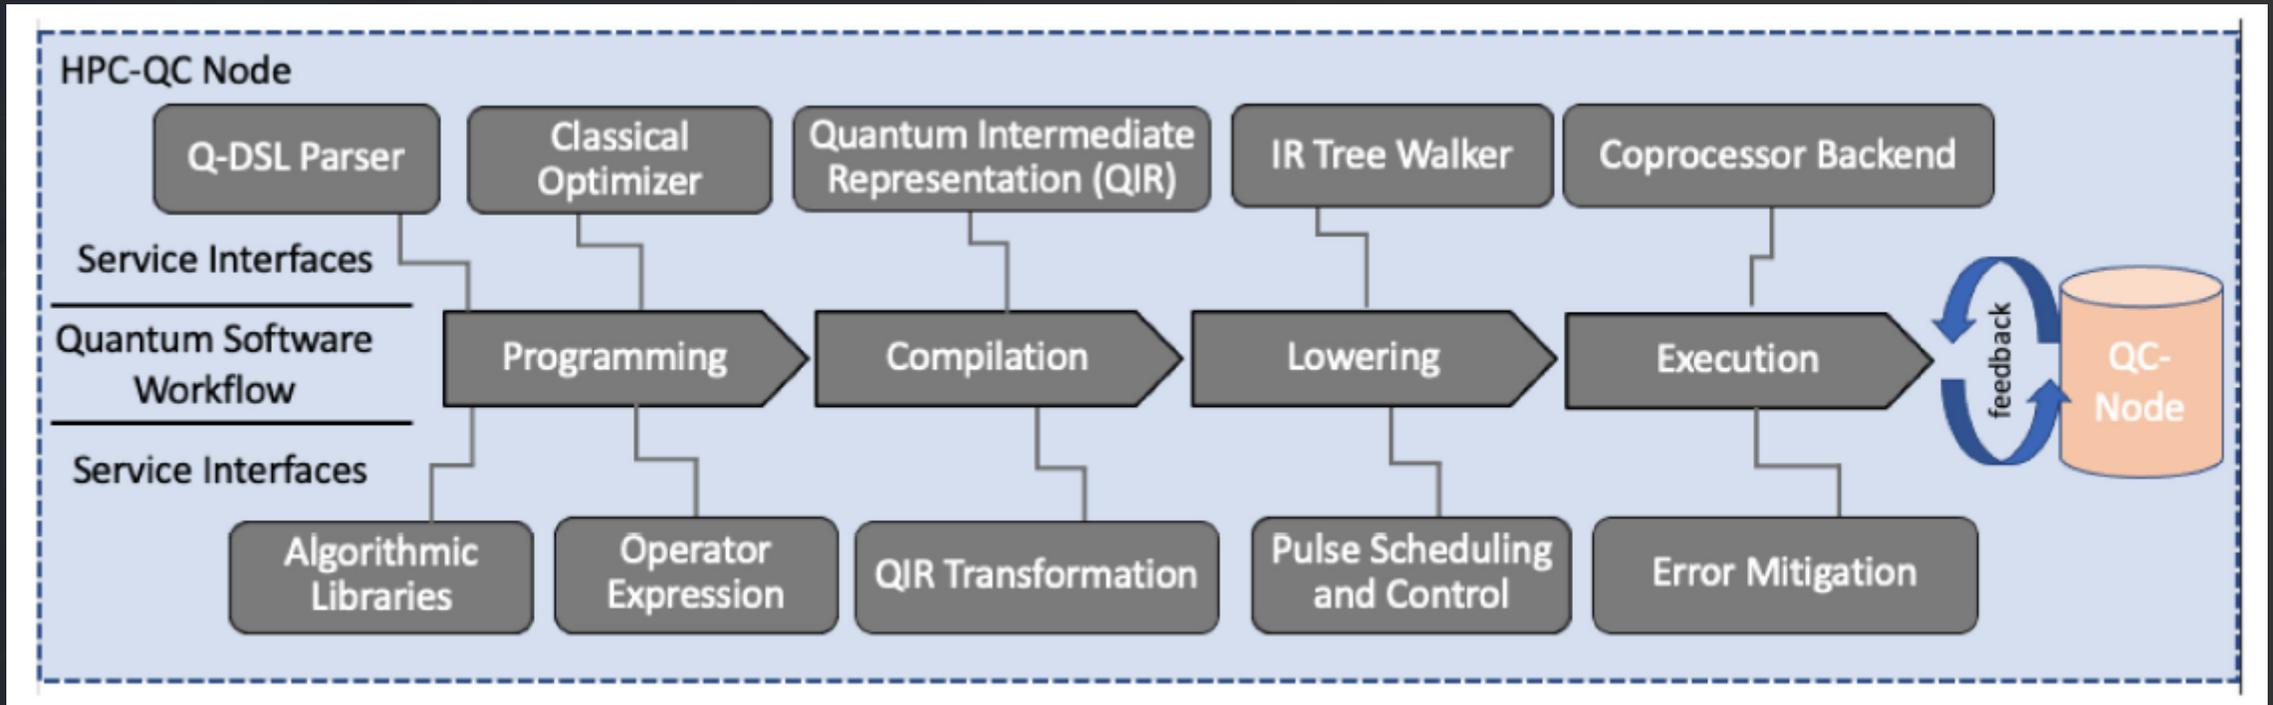

(b) iterative workflow

(c) onloading workflow

Integration of a QC into a HPC environment

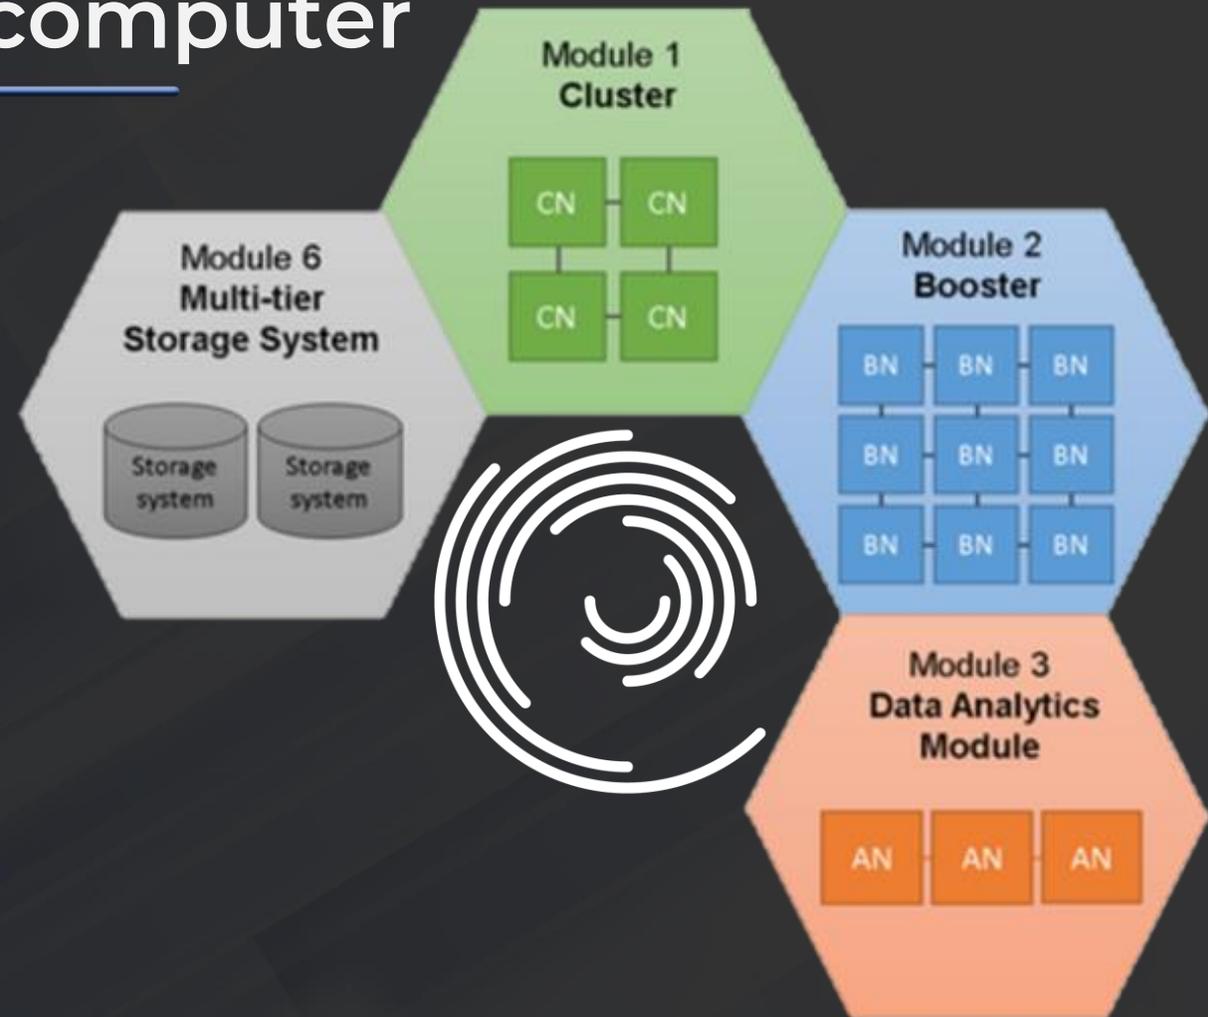

Integration of a QC into a HPC environment

Decomposition of the software architecture required for quantum-HPC integration into a series of workflow steps, each exposing a unique set of service interfaces. This architecture maximizes the flexibility, modularity, and extensibility of the suggested integration strategy. Here we show the workflow decomposed into programming, compilation, IR lowering, and execution components. Each component exposes a series of service interfaces intended for the implementation of concrete use cases.

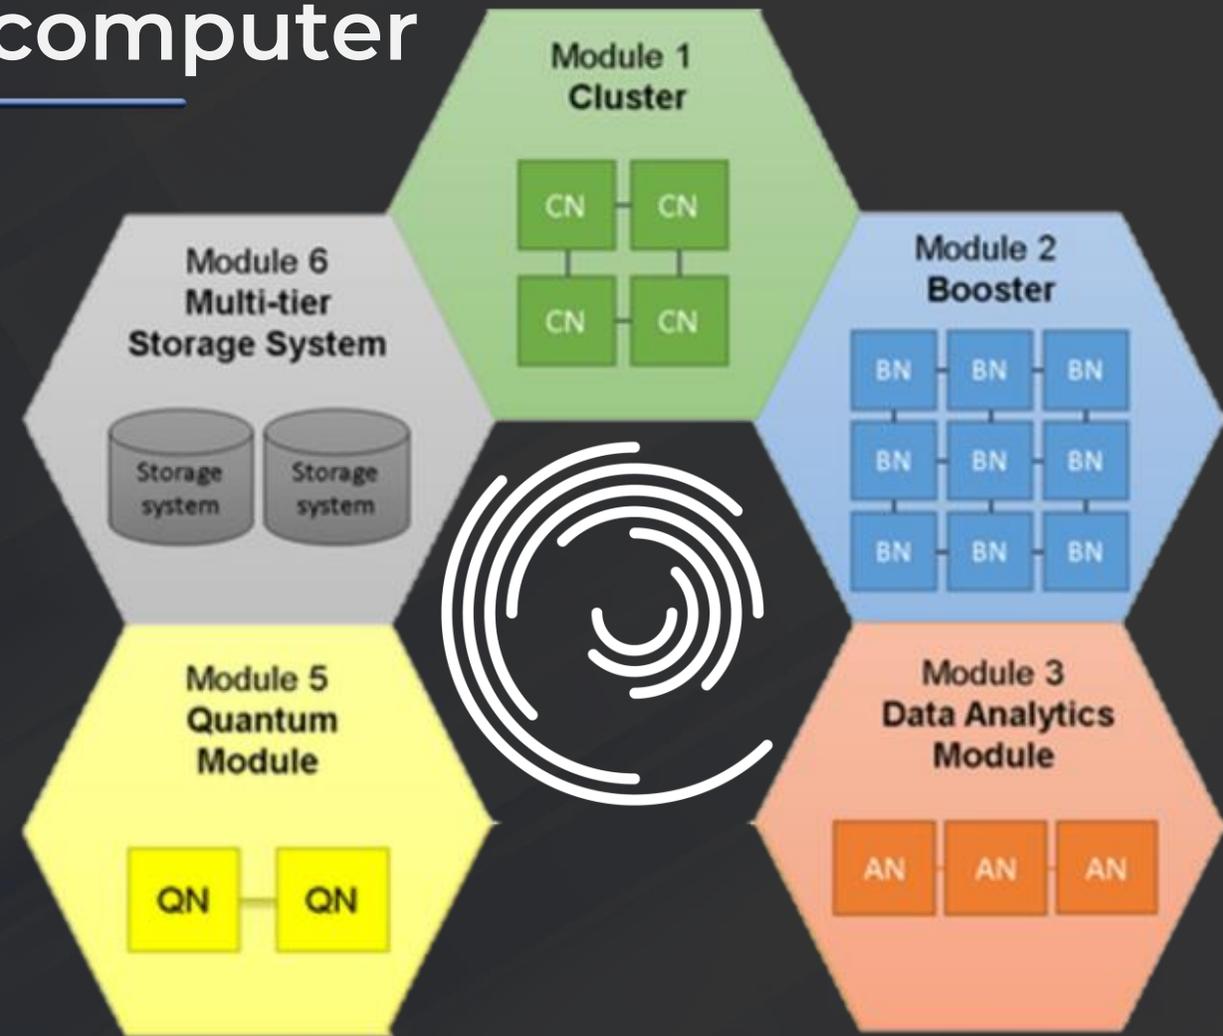

Leonardo: A Modular Supercomputer

- First half 2023: Leonardo
 - Fourth most powerful supercomputer in the World
 - 255+ petaflops (peak performance)
 - Modular Supercomputing Architecture (MSA)

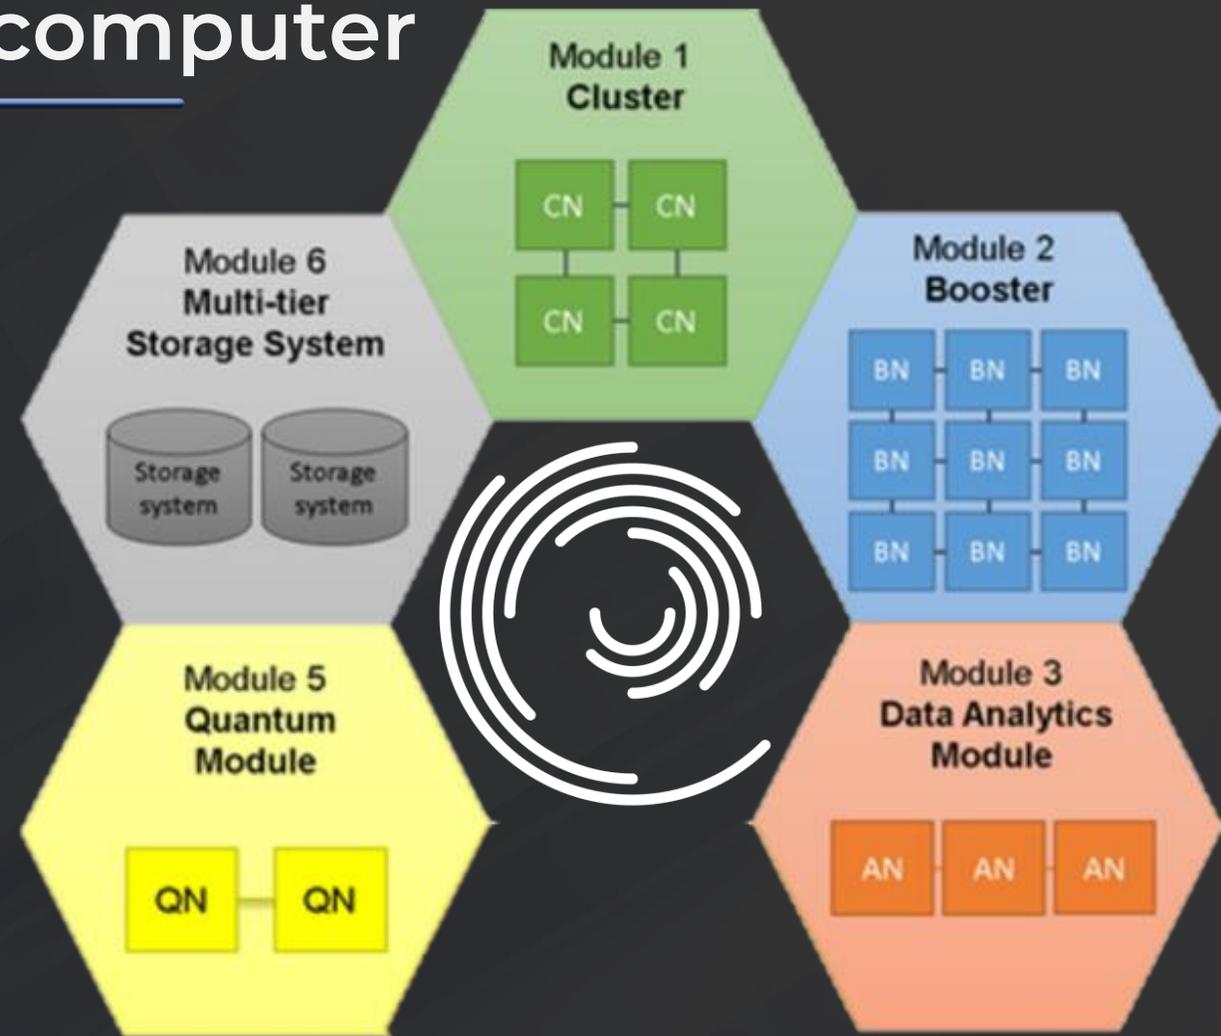

Leonardo: A Modular Supercomputer

- First half 2023: Leonardo
 - Fourth most powerful supercomputer in the World
 - 255+ petaflops (peak performance)
 - Modular Supercomputing Architecture (MSA)
- End 2024: Quantum Module
 - 200 qubits Neutral Atoms Quantum Simulator (analog QC)

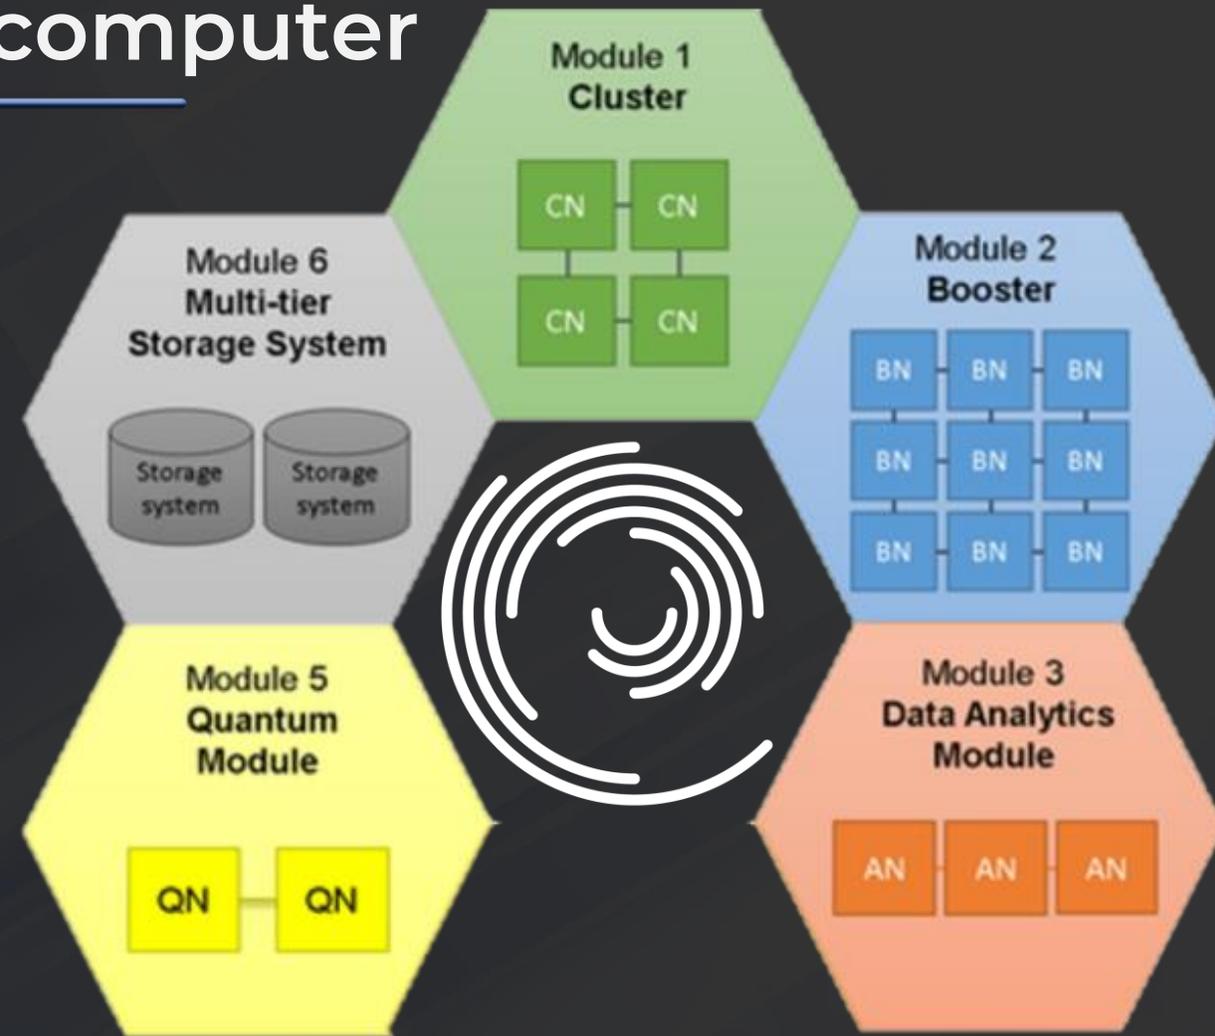

Leonardo: A Modular Supercomputer

- First half 2023: Leonardo
 - Fourth most powerful supercomputer in the World
 - 255+ petaflops (peak performance)
 - Modular Supercomputing Architecture (MSA)
- End 2024: Quantum Module
 - 200 qubits Neutral Atoms Quantum Simulator (analog QC)
- End 2025: QM Improvement
 - Enabling digital and mixed analog/digital mode
