interTwin is funded by Horizon Europe under grant agreement n° 101058386

What is a Digital Twin?

A digital twin is a virtual representation of an object or system helping in decision-making and prediction. It takes in real-time data and keeps track of the lifecycle of the object or system.

interTwin overall objective

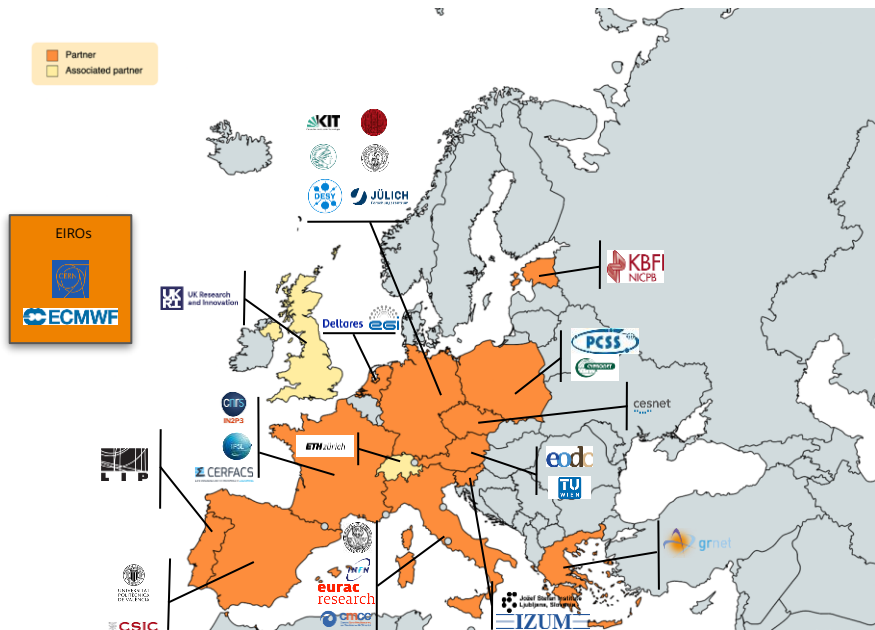

Co-design and implement the prototype of an interdisciplinary Digital Twin Engine.

Digital Twin Engine

- It is an **open-source platform** based on open standards.
- It offers the capability to integrate with **application-specific Digital Twins**.
- Its functional specifications and implementation are based on
 - a **co-designed interoperability framework**
 - conceptual model of a DT for research - **the DTE blueprint architecture**.

Consortium Overview

EGI Foundation as coordinator

29

Participants, including 1 affiliated entity and 2 associated partners

Consortium at a glance

10
Providers
cloud, HTC, HPC resources and access to Quantum systems

11
Technology providers
delivering the DTE infrastructure and horizontal capabilities

14
Community representants
from 5 scientific areas; requirements and developing DT applications and thematic modules

interTwin components

Earth Observation

Cyclone Classification

Fire Hazard Map Generation

Early Flood Warnings

Drought Prediction

Link with Destination Earth

- **Collaboration with ECMWF**

Demonstrators of **data handling across interTwin and DestinE DTs** for the Extremes and Climate in production-type configurations.

- **Collaboration with DestinE**

Development of **common software architecture concepts** that are also **applicable to other major DTs initiatives**.

DESTINATION EARTH

A DIGITAL REPLICA OF OUR PLANET

Destination Earth (DestinE) aims to develop a highly accurate digital model of Earth to monitor the effects of natural and human activity on our planet, anticipate extreme events and adapt policies to climate-related challenges.

Further use cases at CERN

interTwin is part of a broader effort into digital twins at CERN

- **Detector Prototyping**

build a DT of a **testbench detector** and test it on conditions that can't be recreated in the lab easily

- **Online ML for Detectors**

adapt to **real-time property changes** of detector configuration in geometry, temperature, trigger thresholds

- **Environmental Modeling and Prediction Platform**

Foundation Model for multiple weather and climate related applications

- **Agent-based simulation**

We are discussing on how to extend core InterTwin capabilities by BioDynaMo - an **agent-based simulation module**

Requirements

- **Online Learning**

The DTE shall enable handling **stream of data** larger than 10MB/s

- **Federated Learning**

The DTE shall be able to **transmit/receive data synchronically** (at least aperiodically) between different HPC providers

- **Hyperparameter Optimization**

The DTE shall support HPO frameworks (RayTune, etc).

- **Unified access to infrastructure**

DTE shall enable **homogeneous security and access policies**, resource accounting to HPC, HTC and cloud providers

- **Bridge difference in infrastructure needs**

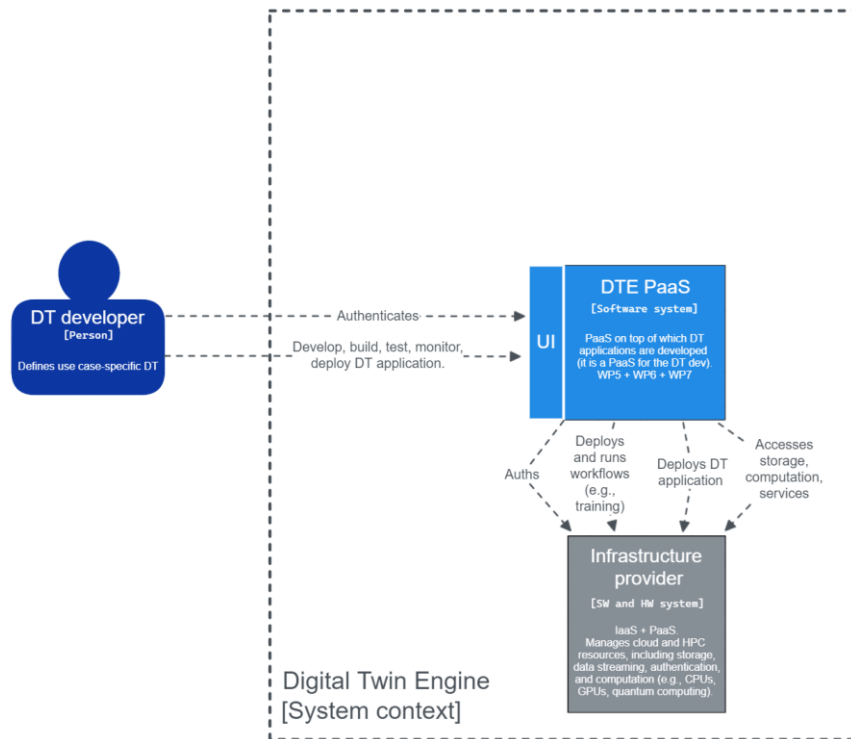

The DTE shall be usable by sciences with **vast differences in compute/storage** needs

In a nutshell

- **DTs are not just...**^[1,2]
 - **Big data / ML**
 - **Physics-based models**
 - **Optimisation**
 - **Simulation or agent-based modelling**
 - **Data streaming**
- **DTs for science:**
 - **Highly flexible (e.g., fast prototyping)**
 - **HPC-oriented**
 - **Open-source community**
 - **One engine for many sciences**

DTE for science – Today

- DTs developed in isolation
- Community-specific technologies and standards
- Great engineering overheads (i.e., reinventing the wheel)

Boils down to... **need for improvement**

Today: we are limited by the technology of our time

DTE for science – Tomorrow

- Unified DTE framework
- Standard DT lifecycle management, thanks to co-design
- Low (engineering) overheads

Results into... **accelerated science**

Tomorrow: we get the best out of research

Are you ready for digital twins?

For follow-up discussions...
Meet us at the **poster**

Thank you!
