Restic CTA at AARNet

Wednesday 26 April 2023 09:25 (15 minutes)

Since 2021, AARNet have been using restic backup software in conjunction with CTA to backup user data in production EOS clusters. The road to production has not been without its challenges, requiring us to modify restic and create a custom backup scheduler and client workflows. This presentation will aim to cover the architecture, with a focus on restic: the basics, the customisations and integration with CTA.
