- **Summary**

# Korean RPCs in CMS

The nuclear & high-energy physics groups of Korea University have been active members of the CMS (Compact Muon Solenoid) of LHC at CERN since 1997.

# Korean RPCs in CMS

Forward Region of CMS

# CMS Endcap RPCs

## 1. Function : L1 muon triggers

2 wings (RE+, RE-)

4 stations (RE1, RE2, RE3, RE4)

Pseudo rapidity coverage :

$$0.9 < \eta < 2.1 \text{ (1.6)}$$

$\eta$  segmentations : 10 (6)

## 2. Total # of RPCs : 756 (432)

Total # of FEBs : 2,268 (1,296)

Total # of channels : 85,248 (41,472)

## 3. By March 2007,

the gap production for phase I  
( $0.9 < \eta < 1.6$ ) was completed for  
the first operation of CMS in 2008.

# A Brief History

---

1. **Fundamental studies to develop the endcap RPCs (1997~)**
  - 1) Beam tests by using high intensity muon beams at CERN
  - 2) Cosmic muon tests at Korea Univ.
  - 3) Long term aging studies by  $\gamma$ 's and neutrons at Korea Univ.
2. **Design of double gap RPCs for the endcap region (2000~2003)**
  - 1) Chamber designs
  - 2) Services for HV, LV, gas, electronics on the chamber level
3. **Manufacturing the production facilities at Korea Univ. (2000~2003)**
  - 1) Gap and chamber production facilities
  - 2) Testing facilities for the quality control
4. **Mass production of the endcap RPCs (2004~)**
  - 1) Phase I production ( $0.9 < \eta < 1.6$ , total 432 gaps) was completed.
  - 2) Phase II production ( $1.6 < \eta < 2.1$ ) is expected to start this year.

# Performance of Korean RPCs

Characteristics	CMS Requirements	Test Results
Time Resolution	< 3 ns	< 1.5 ns
Efficiency	> 95 %	> 95 %
Rate Capability	> 1 kHz/cm <sup>2</sup>	> 1 kHz/cm <sup>2</sup>
Noise Rate	< 15 Hz/cm <sup>2</sup>	< 10 Hz/cm <sup>2</sup>
Plateau Region	> 300 V	> 400 V

Assembled by Chinese at CERN

RPC1+  
CSC1  
on YE1  
(front)

RPC2 on  
YE1 (back)

RPC3 on  
YE3

Heavy-Ion Meeting

Assembled in Pakistan

# Phase II of Endcap RPC

## 1. Purpose

- Restore the full endcap RPC system as described in the TDR (LHCC/97-32)
- Extend the phase I endcap RPC system to  $|\eta| = 2.1$  with 4 trigger stations
- RE1/1, RE2/1 and RE3/1 RPCs in  $1.6 < \eta < 2.1$  (no RE4/1)
- Among them, RE1/1 has the highest priority

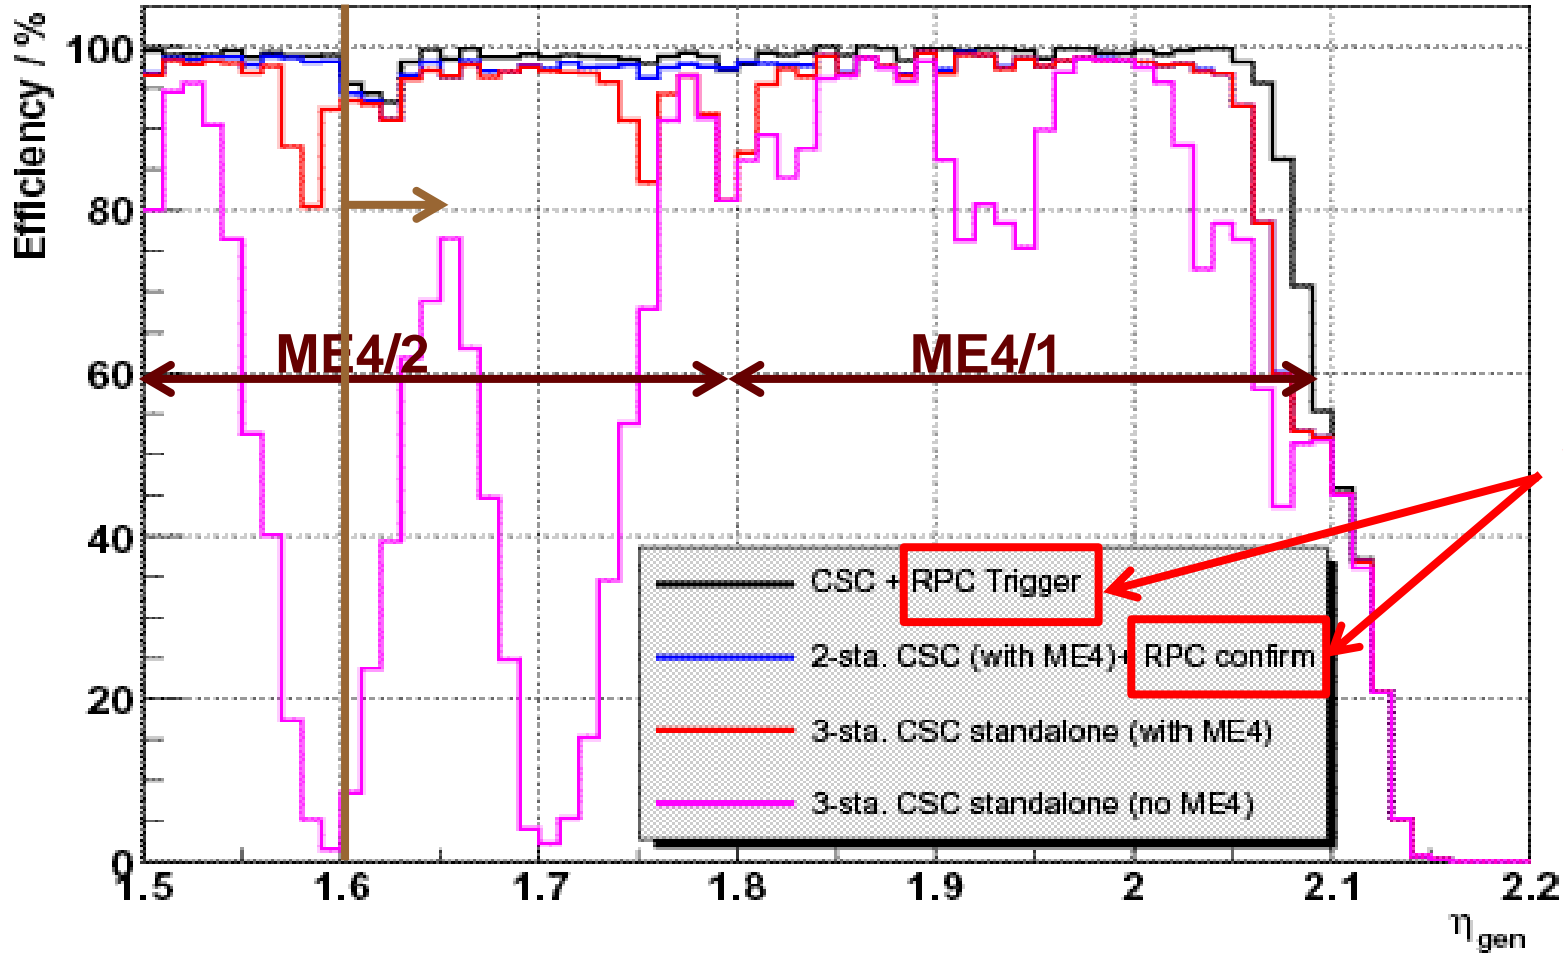

## 2. Plan by the end of 2009

- Get the YE4 shielding walls to support station RE4
- Move the current RE2/2 and RE2/3 RPCs to the RE4 station
- Build the 5th RE station (additional RE2 layer)
  - to reduce the background and noise

## 3. How many RPCs do we need?

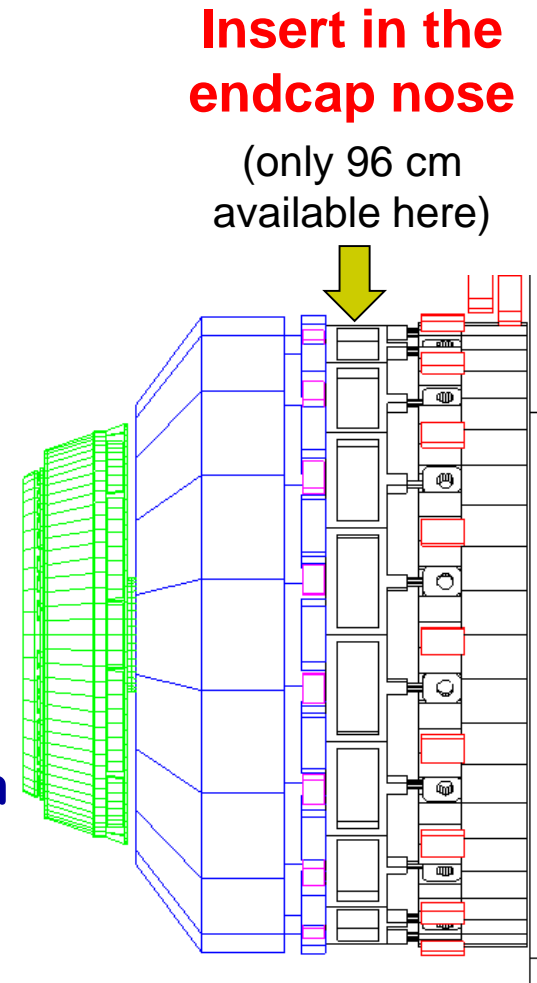

- Double layer RE2/2(144), RE2/3(144), and RE2/1(72) RPCs

# Muon Trigger Efficiency

# RE1/1 R&D

- 1. More compact (thinner + smaller)**
  - Thinner co-axial cable
  - Gluing thinner copper sheet with spray
- 2. More complicated**
  - Soldering area is very small
  - Inside structure of the gas distribution box
  - Complicated overlapped region
- 3. Higher particle rate**
  - Check if the particle rate  $> 2 \text{ kHz/cm}^2$
  - Current 3 board (96 channels) configuration was modified to the 4 board (128 channels) configuration.

# RE1/1 R&D

Total 10 sets of RE1/1 gaps were constructed at KODEL (Dec. 2007).

The readout strip panel for 4 sectors with 32 strips each, covering 4  $\eta$  regions, were produced by etching.

# RE1/1 R&D

Hyunchul Kim (Korea Univ.)

**Covered by FEB shielding box**

**FEB flat cable layout**

**Signal cable layout**

# RE1/1 R&D

Check the configuration of 6 RE1/1 RPCs in the 60 degree sector

Check any interference among the cables, gas lines, and cooling lines in the overlapped RE1/1 region

# Schedule for Phase II Endcap RPCs

1. First 6 RE1/1 RPCs will be installed and ready for the first LHC beam test.
2. Design of the second layer RE2 will be ready by the end of June, 2008.
3. First delivery of the HPL from Italy in July 2008
4. Starting date of the gap production in July 2008
5. All gaps for the phase II RPC system should be built by June 2009.

# Software: Heavy Quark Production

- An interesting subject for the QGP formation
- Experimental probes
  - Quarkonium production
  - B-meson production via secondary  $J/\psi$  production

# High Level Muon Trigger

Raw events  
1 GHz

L1  
40 MHz

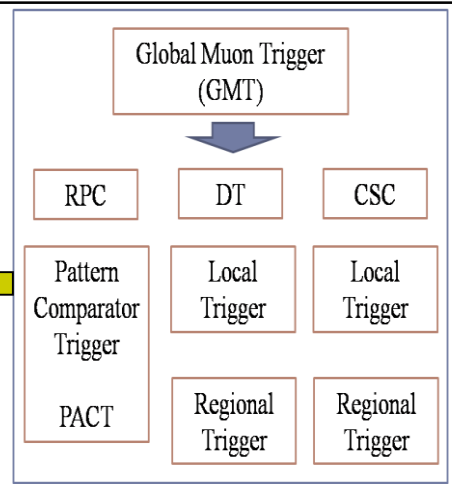

L2  
100 kHz

L3  
100 Hz

Single muon  
 $p_T > 5 \text{ GeV}/c$

Selecting the best trajectory  
among  $\mu$  stations (standalone)

Matching the muon chamber  
information and inner trackers

# High Level Muon Trigger

(CMS IN 2003 – 002) tested the following 4 strategies based on ORCA

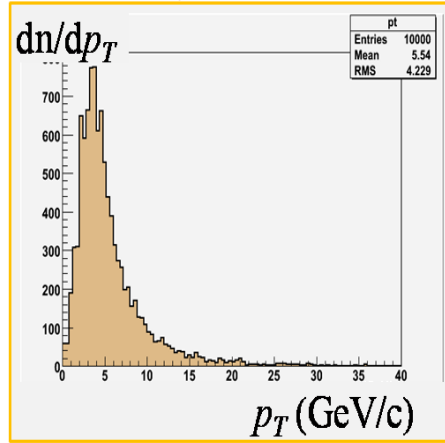

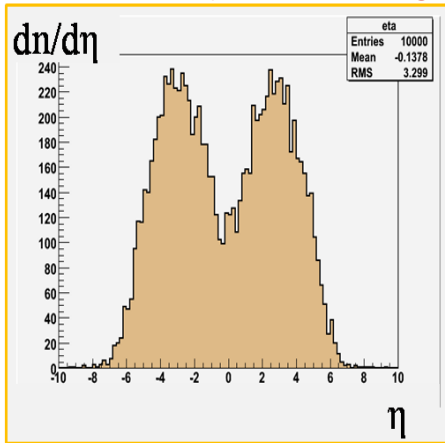

For the preselected muons in  $|\eta| < 2.4$ , decayed from  $J/\psi$ ,

- Strategy 1: 2 opposite sign candidates with L1 only
- Strategy 2: 2 opposite sign candidates with L2 only
- Strategy 3: 2 opposite sign candidates with L1 & L2
- Strategy 4: 2 opposite sign candidates with either L1 or L2

Dongho Moon/Ji Hyun Kim (Korea Univ.) are testing them in the framework of CMSSW.

# Performance of Muon HLT (an Example)

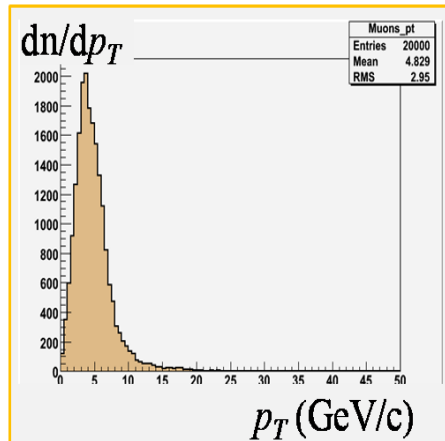

Primary upsilons generated by PYTHIA6

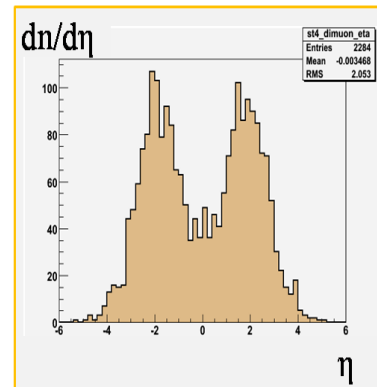

Strategy 2

Decayed muons from primary upsilons

Strategy 4

# CMS HI Computing

- **Seoul Supercomputer Center(SSCC) was established in 2003**
  - The center belongs to Seoul City, but located in the campus of Univ. of Seoul.
- **Director: Inkyu Park + 6 Staffs + 3 Ph.D.**
- **Total of 256 CPUs + Giga switches + KOREN2**

## 2007 upgrade

- 💡 + 10 Giga bps switch
- 💡 SE: Storage of 170 TB
  - 300 HDD of 500 GB
- 💡 CE: 128 CPU cores
  - MC generation
- 💡 + new 64 bit HPC
- 💡 + KREONET
- 💡 Operate OSG

- Interactive  
455 kSI2K**
- Batch (CE)  
273 kSITK**
- Storage (SE)  
172 TB**

# CMS Heavy Ion Tier2/Tier3 Setup

## SSCC (City of Seoul)

dCache pool (200TB)

Nortel Passport 8800(Gb) 2ea

Extream BlackDiamond 8810(10Gb/Gb)

Foundry BigIron 16(Gb) 2ea

Condor Computing pool (+120 CPUs)

Gate, Web, Condor-G dCache/gFTP, Ganglia

KREONET (GLORIAD)  
KOREN (APII, TEIN)

1-2 Gbps

CMS-HI Tier2

20 Gbps

Analysis Tier3

## SPCC (Physics, UoS)

64bit cluster (+ 100CPUs)

Extream BlackDiamond 8810(10Gb/Gb)

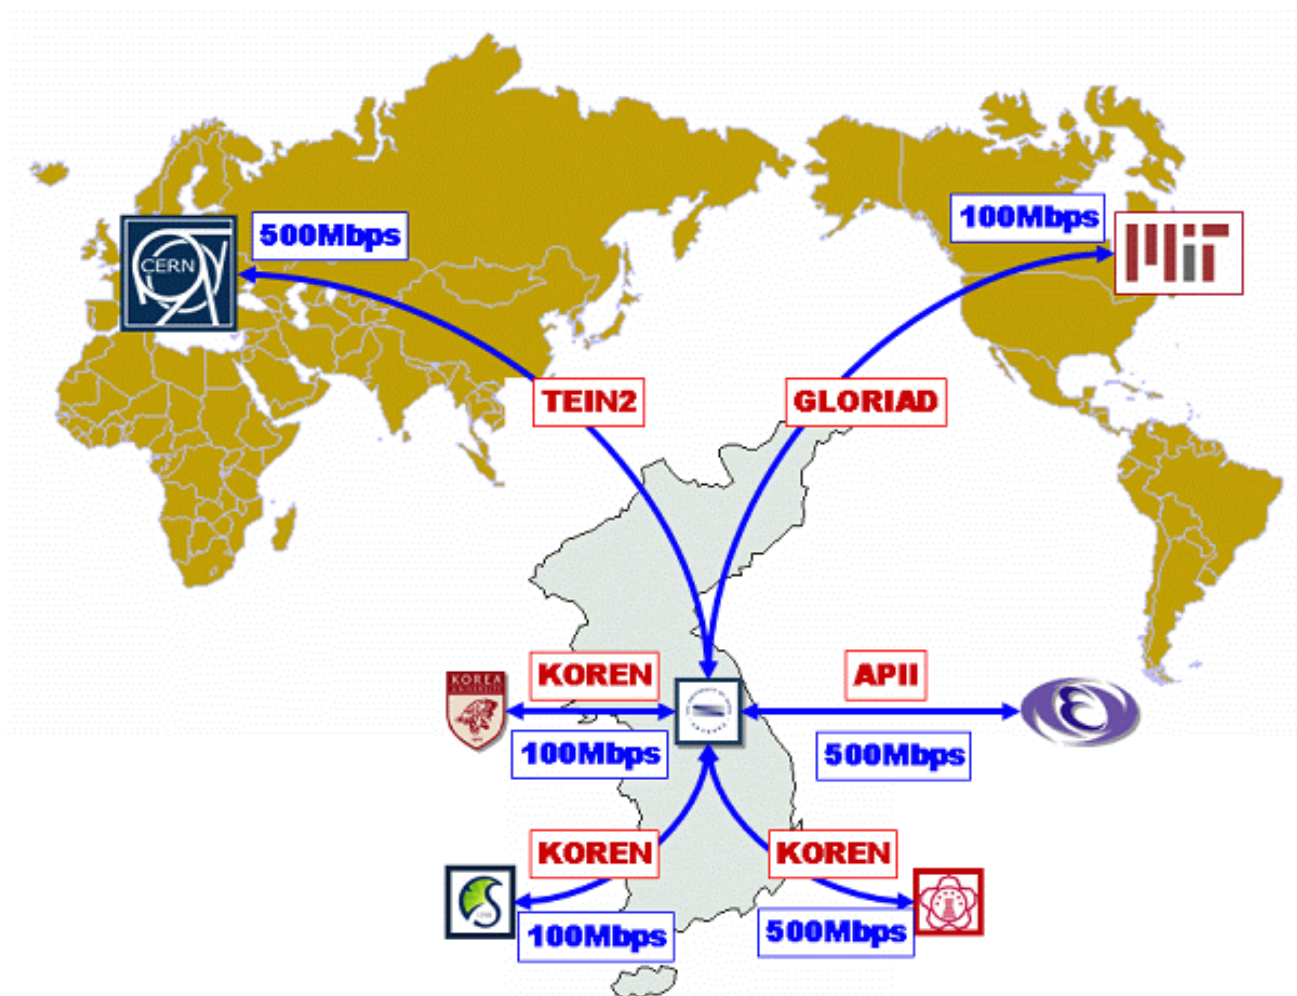

Nortel Passport 8800(Gb)

D-Link L3 Switch(Gb)

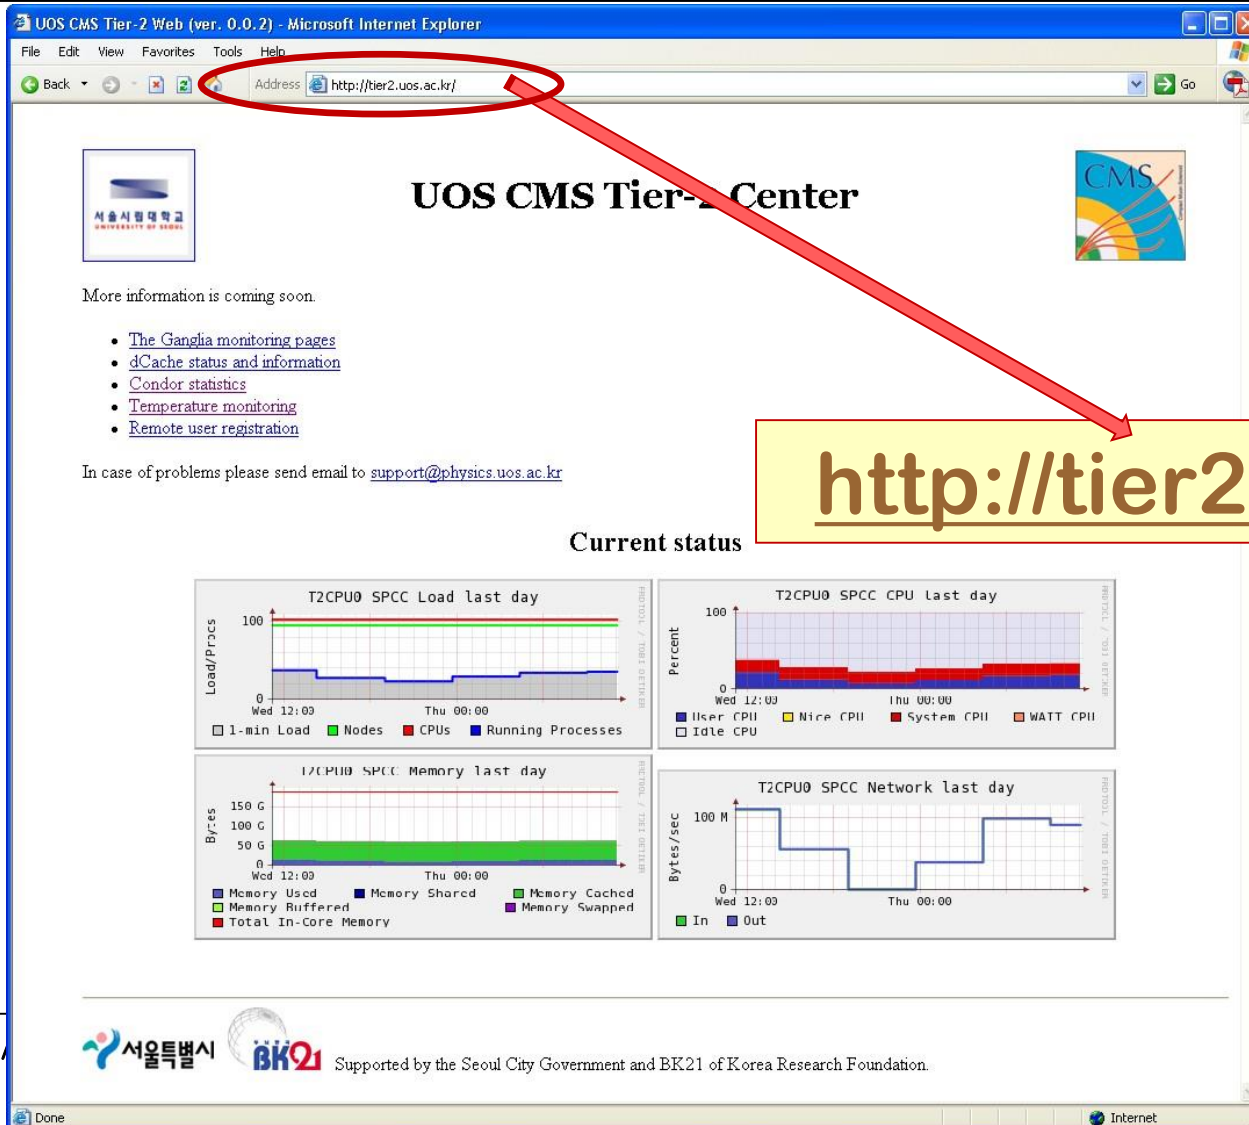

- 64 bit 3 GHz CPU - 64 machines
- 32 bit 2 GHz CPU - 32 machines
- 8 TByte Storage

# Computing Contributions

---

- Coordinate the Korean CMS computing work
  - Short term goal: CMS service work and Local computing
  - Long term goal: 2-3 real computing experts
  
- Tier0 operation
  - Garam Hahn (UoS): DATA & Workflow management
  - Dr. Hyun Kwan Seo (SKKU): DQM (Data Quality Monitoring)

# Summary

---

## □ Hardware Contribution

- Endcap RPC production
- Phase I construction completed/Phase II from this summer

## □ Software Contribution

- Heavy-quark productions (primary & secondary  $J/\psi$ 's)
- Testing the performance of the muon HLT

## □ Computing Contribution

- SSCC for the Tier2 center dedicated to CMS HI.
- Involved in the Tier0 operation

## □ Participants

- Korea University: B. Hong, *H. C. Kim, J. H. Kim, D. Moon*, K.-S. Sim
- University of Seoul: *M. K. Choi, G. R. Han*, Y. S. Kim, I. C. Park, *J. W. Park*
- Chonbuk National University: E. J. Kim
