

Higher-twist contributions to deeply-virtual and photoproduction of mesons

Thursday 25 May 2023 14:45 (20 minutes)

Both deeply-virtual and photoproduction of mesons offer promising access to generalized parton distributions and complementary description of different kinematical regions. Higher-twist effects have been identified as especially important in the case of the production of pseudo-scalar mesons. This was confirmed by recent evaluation of the complete twist-3 contribution to π production and its confrontation with experimental data.
