

# Xmas Theoretical Physics Workshop @Athens 2023

Physics department  
National and Kapodistrian University of Athens

Organizers:

I. Dalianis, G. Itsios, I. Papadimitriou, K. Sfetsos, K. Siampos  
and V. Spanos

HELLENIC REPUBLIC  
**National and Kapodistrian  
University of Athens**

## Some remarks

The meeting is organized each year since 2014 (except for 2020 & 2021). We have started it with Dimitrios Zoakos:

- ▶ After realizing that there is a large number of theoretical physicists, especially **young ones**, working abroad and the need to **share interests** and to get to know each other.
- ▶ There was no analogous-**general theory type**-meeting in Greece, especially this time of the year.
- ▶ That will be a lot of interest near Christmas, since many theorists will be present in Athens for the Holidays.

- ▶ **Primary goal 1:** Bring together established and young researchers at the central building of the National and Kapodistrian University of Athens, in the historical center of Athens.
- ▶ **Primary goal 2:** Over the years various branches of **Theoretical Physics** have profited from **mutual interactions**.  
Over the years we have tried and to a large extent we succeeded, to cover diverse subjects in all branches of **High Energy/Elementary Particle Physics**, as well as topics in **Cosmology, Condensed matter Physics and non-linear dynamics**.
- ▶ **Some Statistics:** So far about **1000** (962) scientists have participated as well as **70** (69) speakers, **50** (47) of them before reaching 10 years after their PhD.

- ▶ Many thanks to the [National and Kapodistrian University of Athens](#) for continual financial support and for providing these facilities for free even during the years of the economic crisis.
- ▶ Thank you all for your participation.
- ▶ I wish you a very productive workshop scientifically and socially!
