

MW in the context of global fits in the SM and beyond (30' talk + 30' discussion)

Wednesday 19 April 2023 11:30 (1 hour)

We discuss the role of MW in the context of global fits of electroweak precision observables, and the compatibility of the current experimental value with the SM. We then generalize the analysis to physics beyond the SM, considering oblique NP and the SMEFT.

Presenter: SILVESTRINI, Luca (INFN, Rome)
