12th Edition of the Large Hadron Collider Physics Conference

Contribution ID: 148 Type: not specified

Engaging the Classroom -Colouring Books, Printables, Masterclasses, and More

The ATLAS Collaboration has developed a variety of Education and Outreach activities designed to engage young minds at home and in the classroom. This material ranges from an original particle physics baby book to colouring books, online printable information sheets and a challenging Masterclass program using real data from LHC proton collisions. Here we present our most recent developments designed to spark interest in children and students of all ages, teaching the methodology of scientific research, sharing the excitement of exploration and discovery, and inviting them to experience the challenges of being an international scientist today. We will also present efforts to make our material more inclusive and available to a wider and more diverse audience around the world.

Authors: BHOPATKAR, Vallary Shashikant (Oklahoma State University); BHOPATKAR, Vallary Shashikant (Florida Institute of Technology (US))

Presenters: BHOPATKAR, Vallary Shashikant (Oklahoma State University); BHOPATKAR, Vallary Shashikant (Florida Institute of Technology (US))

Session Classification: Poster Session

Track Classification: Outreach, Diversity and Education
