

# CERN IT Machine Learning Infrastructure Workshop

Welcome and Introduction

Sofia Vallecorsa, Ricardo Rocha

<https://indico.cern.ch/event/1253881/>

# Motivation

## **Machine Learning (ML) at CERN** since LEP years

- Limited abstraction

- Preliminary feature engineering

- Mostly for classification & regression

## **Deep Learning (DL)**

- Increasingly abstract representations

- Complex computational graphs requiring larger infrastructure

- A large range of applications

**ML / DL has different requirements than typical HEP software**

# Enabling Deep Learning

**Productive R&D** goes hand-in-hand with **smart infrastructure design**.

Developing AI systems is **different** than typical software engineering. In particular:

- **data** discovery, management, and versioning are **more complex**;
- **modular design** is **not trivial** since AI components exhibit **complex entanglement**.

However **deployment & integration** into “regular” software and services is critical

- Already 10 years of “**AI lifecycles**” - inspired by data mining standards

# Initiative

## Improve the Machine Learning offering in CERN IT

Understand what is there and what is missing

Follow up with improvements to services and end user experience

### Proposed Activities and Workshops

1. **Today:** Survey the ML infrastructure offering and usage in CERN IT
2. TBA: Survey and document use cases and requirements CERN wide
3. TBA: Survey and document state of the art technologies and infrastructure

# Today's Goals

Survey CERN IT ML infrastructure and services

Collect the department use cases for ML

Prepare for the Microsoft workshop happening April 4th. Joint research on:

Heterogeneous Architectures

Data Management and Storage

**AI Models and Platforms**

*Digital Twins*

# Today's Agenda

<https://indico.cern.ch/event/1253881/>

Service Sessions: 20 minutes + 5 minutes Q&A

Application Sessions: 7 minutes

Discussion and Next Steps

# Next Steps

To be reviewed together at the end of this workshop...

Organize future workshops

- Use cases and requirements CERN wide

- State of the art technologies and infrastructure

Propose ML initiatives with all business engagement units

THE #1 PROGRAMMER EXCUSE  
FOR LEGITIMATELY SLACKING OFF:

"MY CODE'S COMPILING."
