

Exercises 1: Data Science

Tuesday 22 August 2023 16:30 (1 hour)

The exercises provide hands-on experience in three phases: First, we reiterate some examples from lecture to give basic experience. A set of intermediate exercises then extends that to some new problem areas. Finally, students can choose of one of several larger advanced problems to work through.

The very first step is find somebody to work with and sit down together. The two of you will be working together on these exercises. These have been designed to work best wo people (or occasionally three), not with one!

To start the exercises, open the instructions URL (below) in your favorite web browser and follow those instructions.

Please read that index page's instructions all the way through. We've put some general info at the top that you should know, and put some reference links at the bottom that you might later discover you need.
