

Tools and Techniques L2: Tools for Collaboration, Software Engineering Across the Project

Monday, August 21, 2023 2:30 PM (1 hour)

We continue the track with a discussion of system performance, and what you can (and can't) to affect it. We examine tools to help with that, discussing how they work and how they can mislead. We then discuss source control as a tool for collaboration. Using examples from basic to large and advanced, we show how individual choices can affect the building of large systems.
