

The more than 50 European research institutions contribution to R&D on particle accelerator technologies strongly support the establishment of a **pilot INFRATECH** call for the 2025/25 RI WP, oriented towards low-TRL exploratory technology developments with strong co-innovation content with industry, to create the basis for an evolution of particle accelerator technology towards supporting and enlarging their wide user community in a sustainable way, enhancing at the same time their impact on society and on industrial production technologies.

On a longer term, the ambition of the accelerator research community is to launch a co-funded partnership for accelerator technology, with goals and operation modalities to be coordinated with the priorities of the Commission.
