The recent status of the HUNT prototypes

Monday 21 July 2025 18:20 (15 minutes)

To optimize the design of High Energy Underwater Neutrino Telescope (HUNT) project, we have already almost finished the development of a super large Optical Module (OM) with 20 inch PMT and LED calibration module. Since 2023, we successfully deployed some prototypes in Lake Baikal and the South China sea respectively. This report will present the specific design of OM and LED module, and show some operation results of these prototypes.

Collaboration(s)

Authors: GAO, Bo; LIU, Cheng; CHEN, Mingjun; YIN, Qingchu; ZENG, Zongkang

Presenter: ZENG, Zongkang

Session Classification: NU

Track Classification: Neutrino Astronomy & Physics
