

# Brokers, recommendation systems and adaptable machine learning

*7 June 2024 - Exploring the Dark Side of the Universe Tools  
Île de Noirmoutier, France*

**Emille E. O. Ishida**

*Laboratoire de Physique de Clermont, CNRS - Université Clermont-Auvergne  
Clermont Ferrand, France*

# Science case: SNIa cosmology

Standard candles used to measure cosmological distances

[http://supernovae.in2p3.fr/sdss\\_snls\\_jla/ReadMe.html](http://supernovae.in2p3.fr/sdss_snls_jla/ReadMe.html)

[https://supernova.eso.org/exhibition/images/1111\\_E\\_549779main\\_pia14095\\_full/](https://supernova.eso.org/exhibition/images/1111_E_549779main_pia14095_full/)

*The paradigm shift:*

# Big data in astronomy

**SDSS**

2000 - now

Primary mirror: 2.5 m

120 TB

**ZTF**

2018 - now

Primary mirror: 1.2 m

1.4 TB/night

**VERA C. RUBIN  
OBSERVATORY**

15 TB/night

From 2025

Primary mirror: 8.4 m

*The paradigm shift:*

# Big data in astronomy

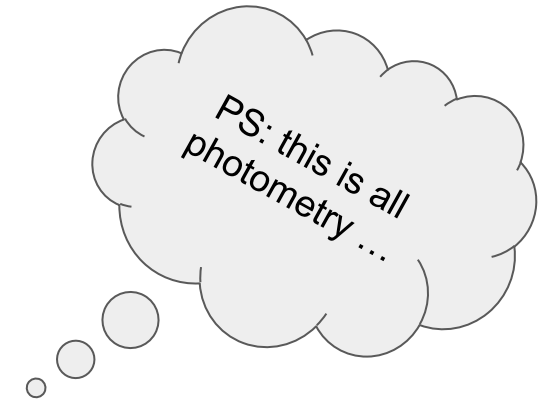

**SDSS**

2000 - now

Primary mirror: 2.5 m

120 TB

**ZTF**

2018 - now

Primary mirror: 1.2 m

1.4 TB/night

**VERA C. RUBIN  
OBSERVATORY**

15 TB/night

From 2025

Primary mirror: 8.4 m

# Photometric SNIa cosmology

Standard candles used to measure cosmological distances

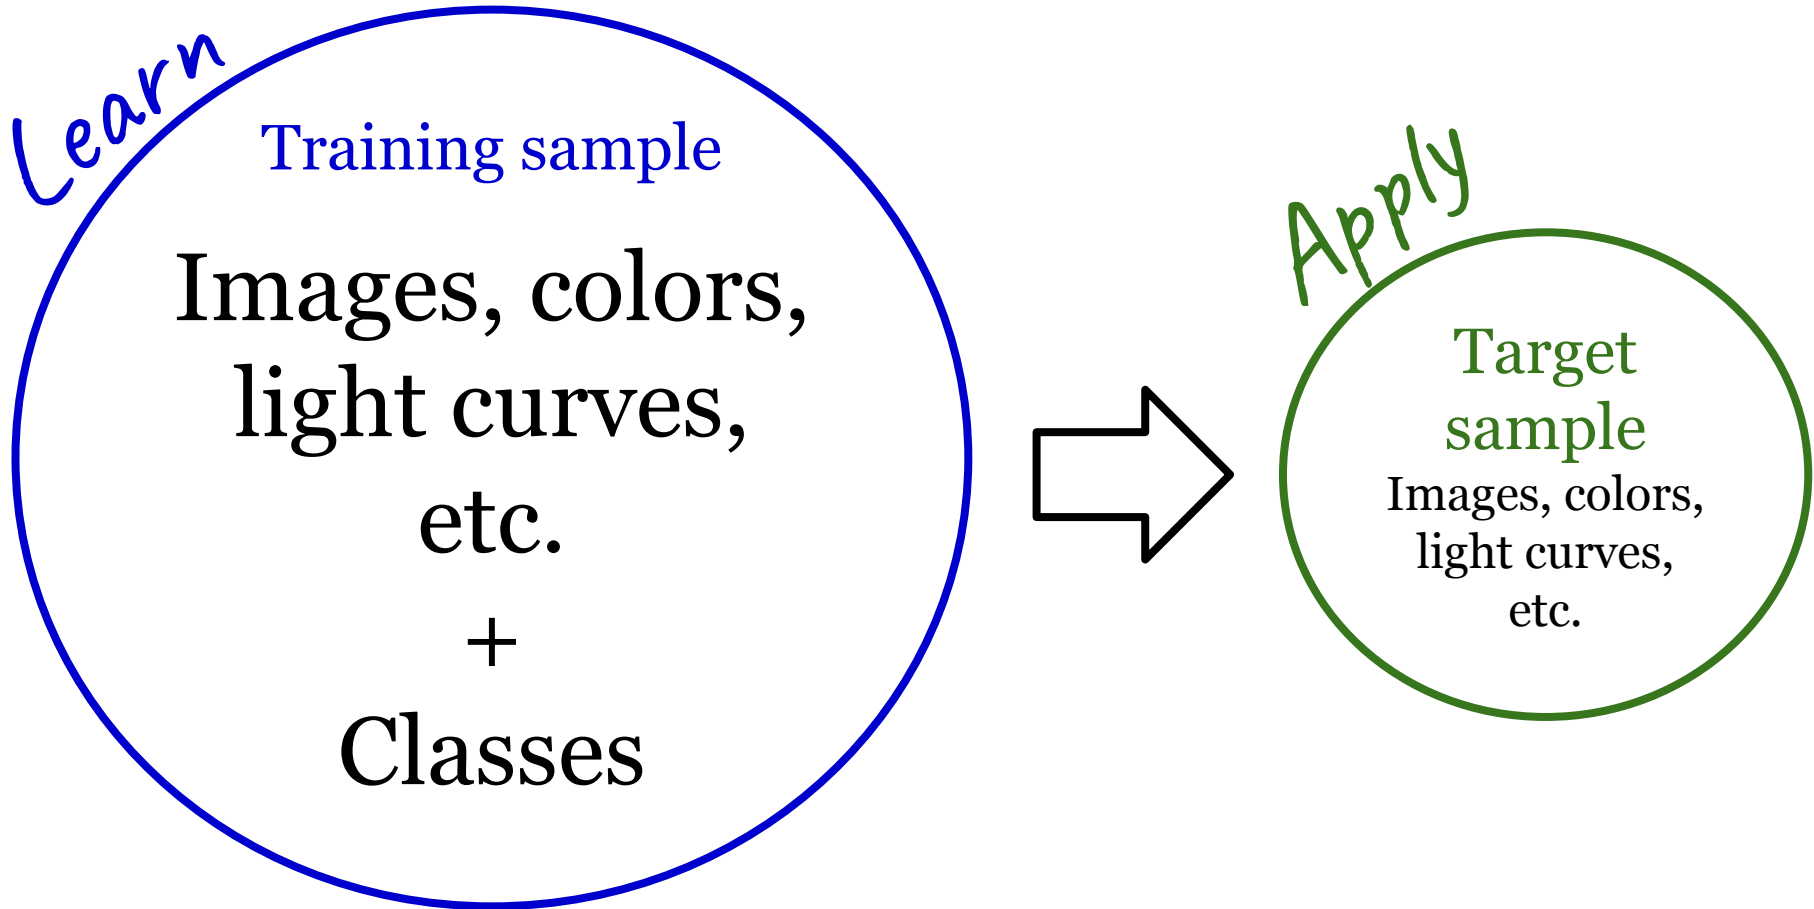

Without SN spectra!

[http://supernovae.in2p3.fr/sdss\\_snls\\_jla/ReadMe.html](http://supernovae.in2p3.fr/sdss_snls_jla/ReadMe.html)

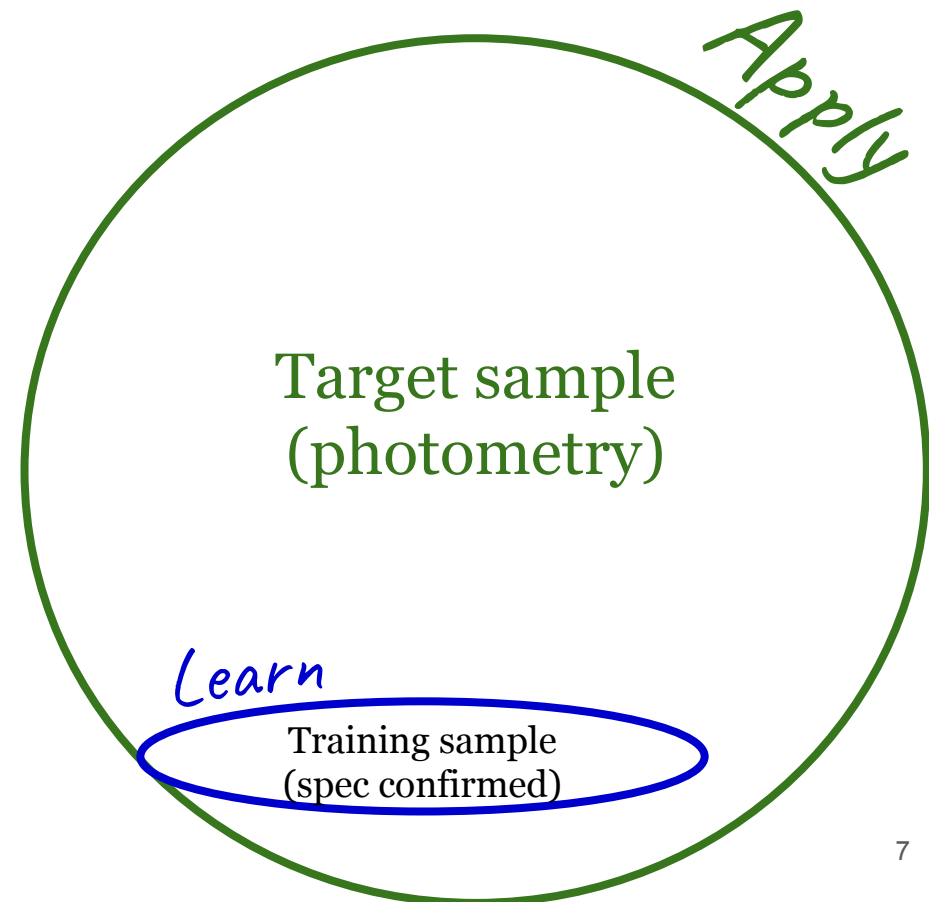

*If only it were that simple ...*

# Ideal Supervised learning situation

*In astro, training means spectra*

# Real astro-learning situation

Proposal solution ...

# Let the algorithm choose the training

Given limited resources, we need **recommendation systems!**

amazon

35% OF AMAZON'S REVENUE ARE GENERATED BY IT'S RECOMMENDATION ENGINE.

NETFLIX

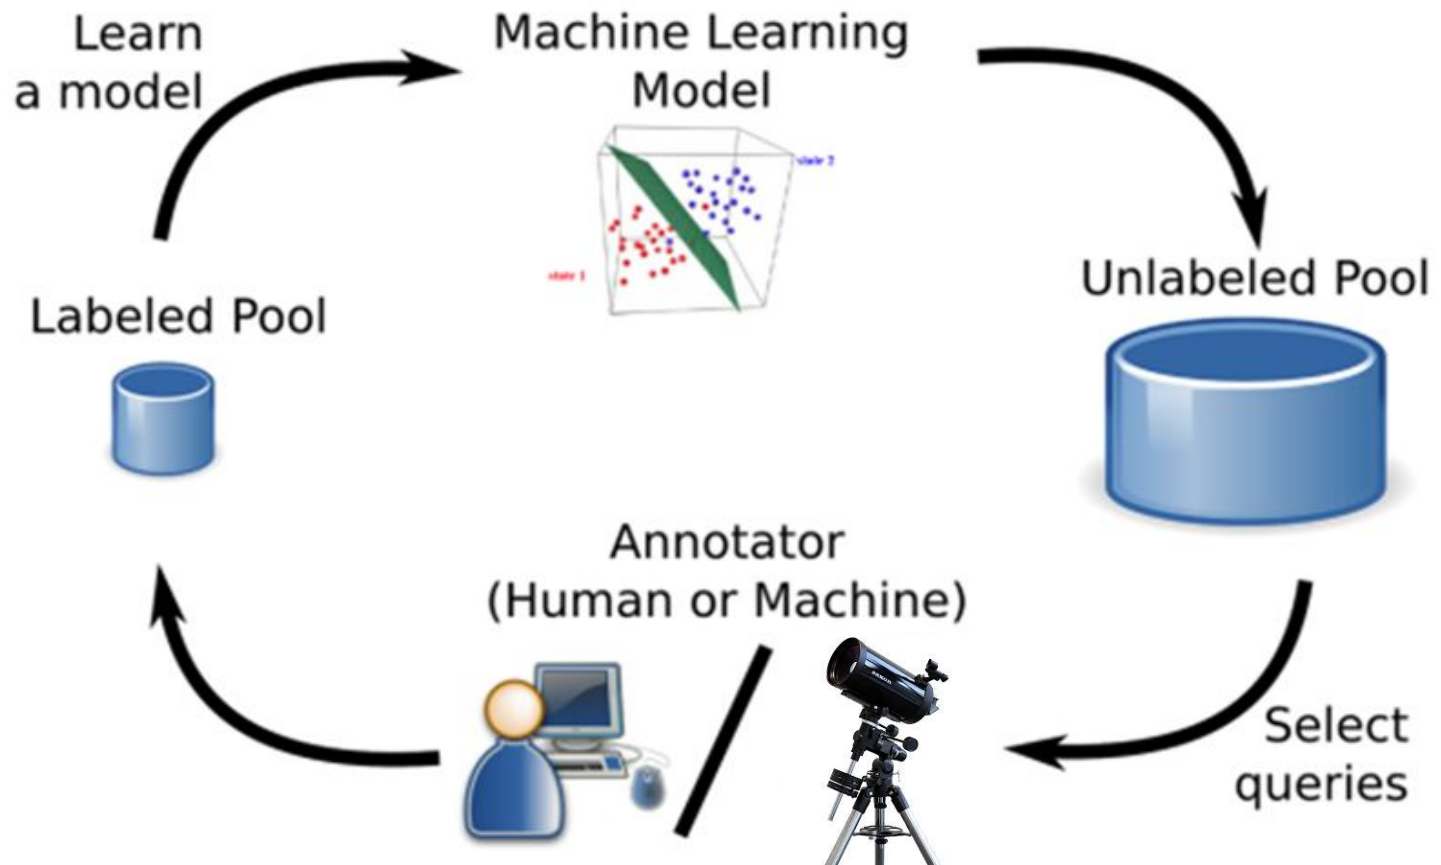

75% OF USERS SELECT MOVIES BASED ON NETFLIX'S RECOMMENDATIONS.

# Active Learning

*Optimal classification, minimum training*

# AL for SN classification

*Static results from simulations*

From COIN Residence Program #4, **Ishida et al.**, 2019, *MNRAS*, 483 (1), 2–18

Machine learning was not made for fundamental science ...

# Classification $\Rightarrow$ Cosmology ?

5% contamination can be catastrophic ... **depending on the contaminant class**

Malz et al. (the RESSPECT team), 2023 - [arXiv: astro-ph/2305.14421](https://arxiv.org/abs/2305.14421)

# RESSPECT: Recommendation System for Spectroscopic Follow-up

# Take home message:

- “Big data” in astronomy means more **photometry**
- Be suspicious of off-the-shelf ML applications to fundamental sciences
- Optimal results from machine learning will depend on **optimized recommendations systems** with well defined science goals

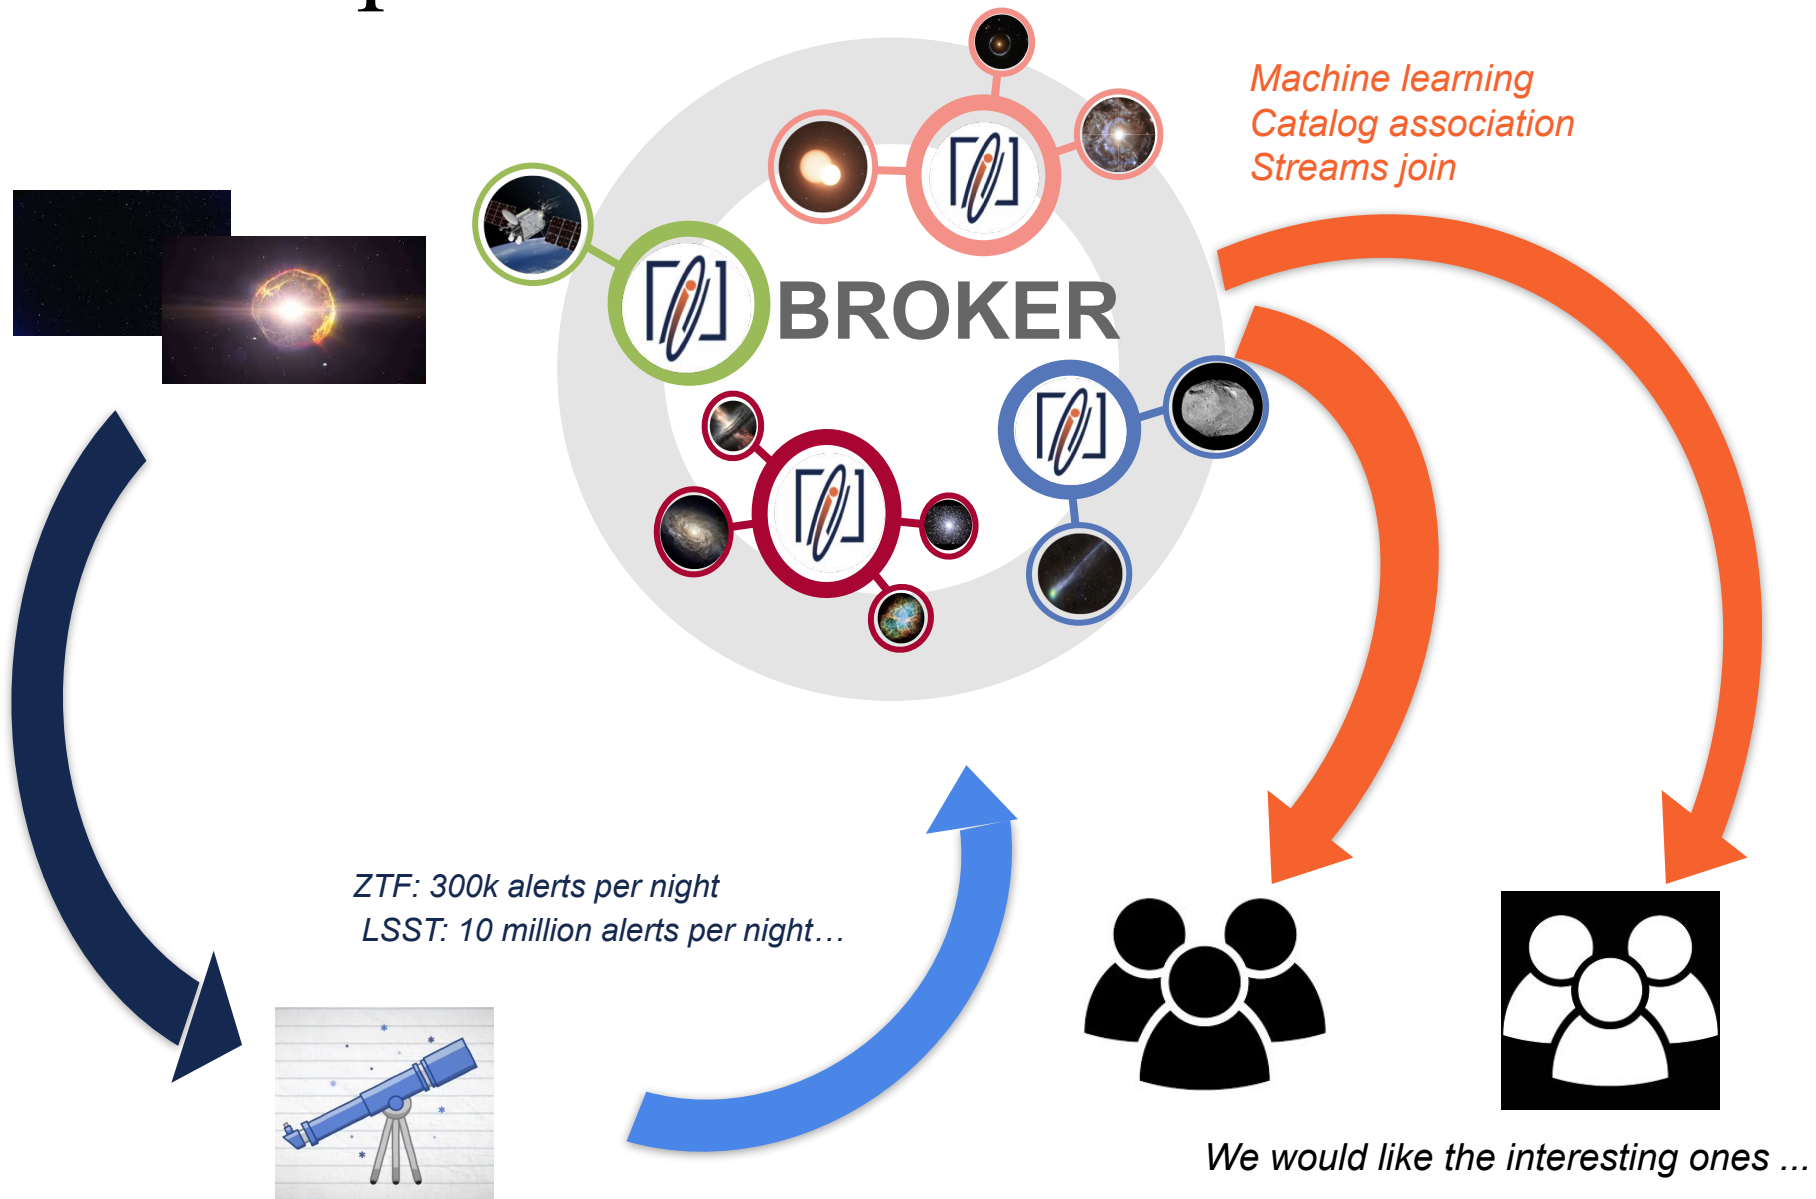

# Take home message:

- “Big data” in astronomy means more **photometry**
- Be suspicious of off-the-shelf ML applications to fundamental sciences
- Optimal results from machine learning will depend on **optimized recommendations systems** with well defined science goals

How will you (or anyone) get the data in the era of Rubin?

# The data path

# Ongoing science projects

*AGN – ML-based + catalogs – arxiv:2211.10987*

***Supernovae & Core-collapse – ML & DL-based – arxiv:2111.11438,2207.04578,2303.08951***

*Pair-instability Supernovae – ML-based*

*GRB follow-up + Orphan GRB – Fermi, Swift + partnership with SVOM*

*+ Multi-messenger analysis and others!*

# Fink EarlySNIa candidates

## Fink Early SNIa module:

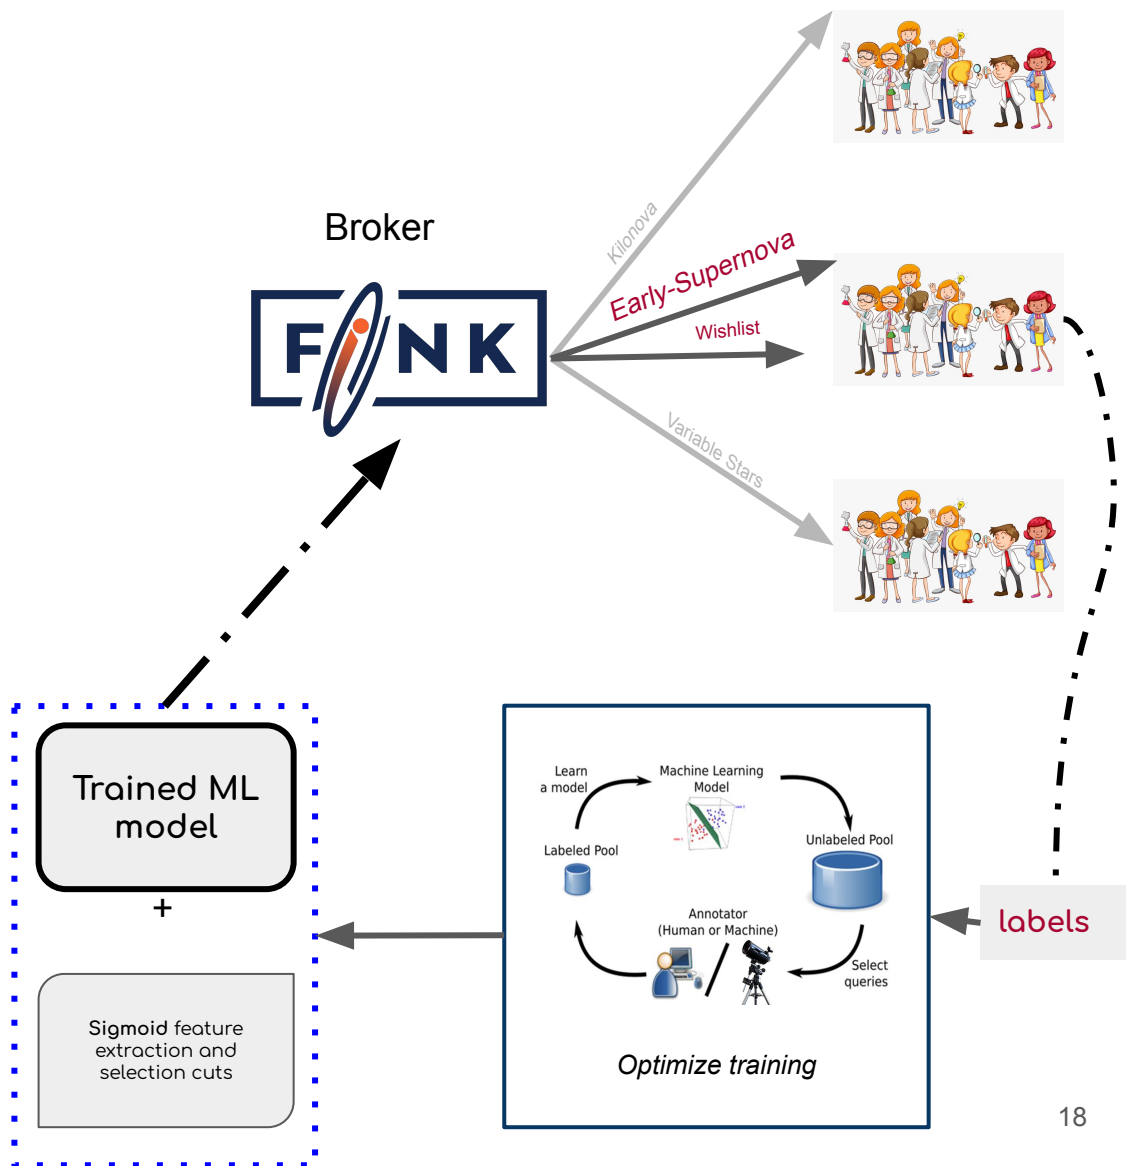

- Agreement with [SuperNNova](#)
- Only rising candidates
- from November/2020 to November/2022 Fink communicated 1,533 early SNIa candidates to TNS

- 908 (59%) of which were followed-up & spectroscopically by facilities around the world
- 788 (86%) were spectroscopically confirmed as SNIa

# For Rubin ...

*Automatic re-training  
once informative new  
labels are made available*

# Take home message:

- Recommendation system can (and should) be used in a variety of science cases
- Fink infrastructure was built to allow smooth integration of adaptive learning
- Automatization of the machine learning cycle is essential
- Coordination will be a challenge .. but different players are preparing for it

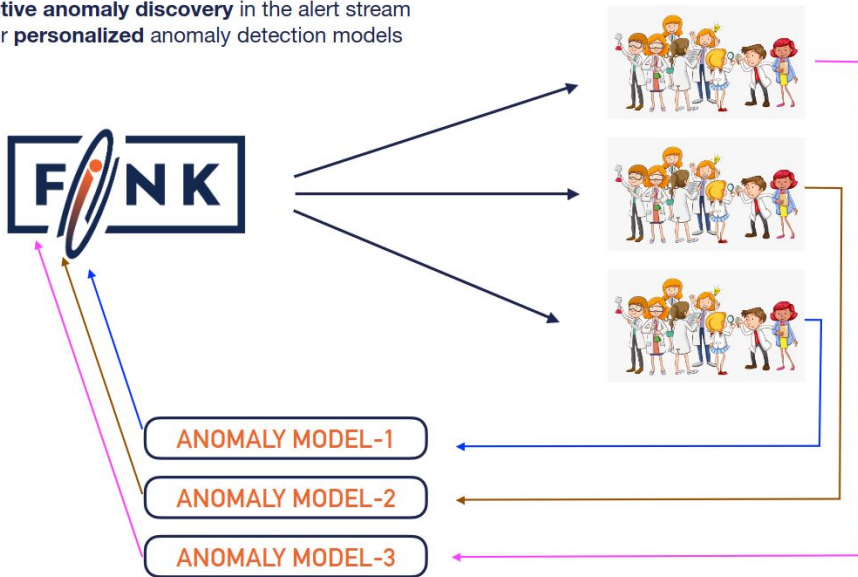

# The beauty of an observational science

*“... telescopes that merely achieve their stated science goals have probably failed to capture the most important scientific discoveries available to them.”*
