Ultra High Energy Cosmic Ray Anisotropies

Alberto Gálvez Ureña

Institute of Physics of the Czech Academy of Science

CEICO

UHECRs at Earth

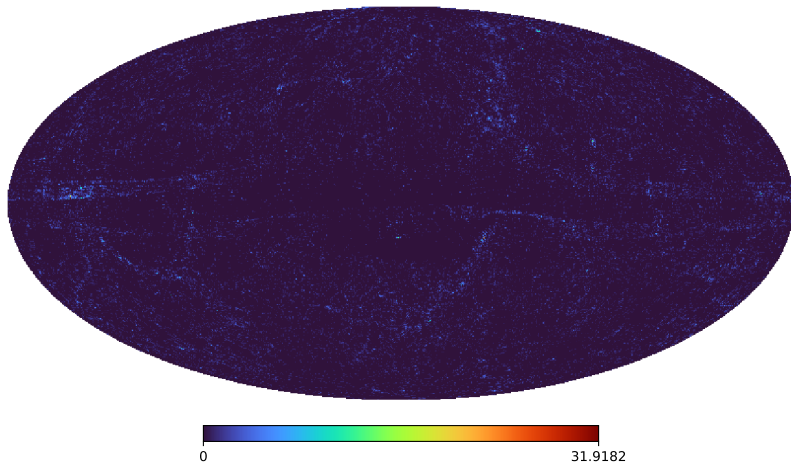

Figure: A Ultra High Energy Cosmic Ray (UHECR) map.

Steps for a Map of UHECRs

- Define the sources of UHECRs (Starburst galaxies, AGNs, TDEs...)
 - Position (All galaxies in 2MASS redshift survey farther than 5Mpc)
 - Chemical composition (All protons)
 - Injection spectrum ($\gamma = 2.6$)
- Extragalactic propagation effects:
 - Redshift (Given by 2MASS redshift survey and Cosmicflows-4)
 - Interactions with Cosmic Microwave Background and Extragalactic Background light (Calculated with Simprop and Prince)
 - Extragalactic Magnetic Fields (Ignored)
- Effect of the Galactic Magnetic Field (Model PT11)

What I am working on

- Work with real data from:
 - Telescope Array (TA) - Northern hemisphere
 - Pierre Auger Observatory (PAO) - Southern hemisphere
- Analyse the data using harmonic and angular auto- and cross-correlations (with other maps such as galaxy map)
- Compare with simulated maps

Measurement of Lepton Flavour Universality in top quarks pairs events at CMS

Da Molin Giacomo

CMS Physics Group of LIP Lisboa

12th International IDPASC school, 18-28 September 2022

Aim of the thesis

The Standard Model predicts **Lepton Flavour Universality**, meaning that all charged leptons have the same weak coupling. Deviation from this behaviour would be a clear signal of New Physics.

Decay modes	TAUOLA-CLEO
$\tau \rightarrow e \nu_e \nu_\tau$	17.8 %
$\tau \rightarrow \mu \nu_\mu \nu_\tau$	17.4 %
$\tau \rightarrow h^\pm \text{ neutr. } \nu_\tau$ (single-prong)	49.5 %
$\tau \rightarrow \pi^\pm \nu_\tau$	11.1 %
$\tau \rightarrow \pi^0 \pi^\pm \nu_\tau$	25.4 %
$\tau \rightarrow \pi^0 \pi^0 \pi^\pm \nu_\tau$	9.2 %
$\tau \rightarrow \pi^0 \pi^0 \pi^0 \pi^\pm \nu_\tau$	1.1 %
$\tau \rightarrow K^\pm \text{ neutr. } \nu_\tau$	1.6 %
$\tau \rightarrow h^\pm h^\pm h^\pm \text{ neutr. } \nu_\tau$ (three-prong)	14.6 %
$\tau \rightarrow \pi^\pm \pi^\pm \pi^\pm \nu_\tau$	9.0 %
$\tau \rightarrow \pi^0 \pi^\pm \pi^\pm \pi^\pm \nu_\tau$	4.3 %
$\tau \rightarrow \pi^0 \pi^0 \pi^\pm \pi^\pm \pi^\pm \nu_\tau$	0.5 %
$\tau \rightarrow \pi^0 \pi^0 \pi^0 \pi^\pm \pi^\pm \pi^\pm \nu_\tau$	0.1 %
$\tau \rightarrow K_S^0 X^\pm \nu_\tau$	0.9 %
$\tau \rightarrow (\pi^0) \pi^\pm \pi^\pm \pi^\pm \pi^\pm \pi^\pm \nu_\tau$ (five-prong)	0.1 %
other modes with K	1.3 %
others	0.03 %

<http://dx.doi.org/10.1103/PhysRevD.105.072008>

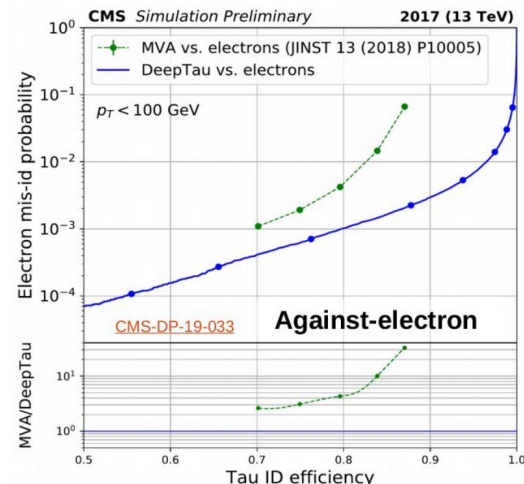

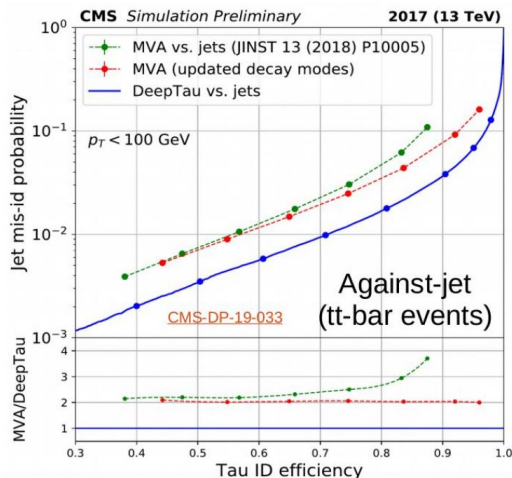

$$R_{\tau/\mu} : \mathcal{B}(W \rightarrow \tau \bar{\nu}_\tau) / \mathcal{B}(W \rightarrow \mu \bar{\nu}_\mu)$$

	CMS	LEP	ATLAS
$R_{\tau/\mu}$	0.985 ± 0.020	1.070 ± 0.026	0.992 ± 0.013

Exploit Run2 data **CMS** advancements in particles identification techniques to use main decay channel of the tau lepton thanks to....

Tools

.... the **DeepTau** Deep Neural Network to separate hadronically decaying τ from e, mu, jets and ...

... a smart observable definition through a **double ratio**:

$$R_{\tau/\mu} = \frac{N(t\bar{t} \rightarrow b\bar{b}\tau_h e\nu\nu)}{N(t\bar{t} \rightarrow b\bar{b}\mu e\nu\nu)} \cdot \frac{N(DY \rightarrow \mu\mu)}{N(DY \rightarrow \tau_h\tau_\mu)}$$

Leading uncertainties are lepton systematics:

- Use DY normalization channel to have same leptons at numerator and denominator
- Same kinematic selections to improve uncertainty reduction
- Working on GNN to improve selection and get higher statistics and purity versus backgrounds (Single top, W+Jets, non-prompt leptons)

Preliminary estimations seem to be very encouraging and allow a precision measurement to test the SM

Water Cherenkov Test Experiment (WCTE) and Hyper-Kamiokande (HK) Calibration Sources

D. Costas-Rodríguez¹, J. A. Hernando-Morata¹, J. Renner¹

¹IGFAE / Universidade de Santiago de Compostela

IDPASC Summer School, 18/09/2023

Objectives

- Design, simulation, development and testing of the WCTE calibration sources that will be used in HK too.
- Neutron Source particle reconstruction for particle identification using deep NNs.

- Machining of methacrylate bar, carried out by **Iñigo Alkorta et al.** (Fabrikazio Mekanikoko mintegia, Izarraitz Lanbide Heziketa)

Plastic screws

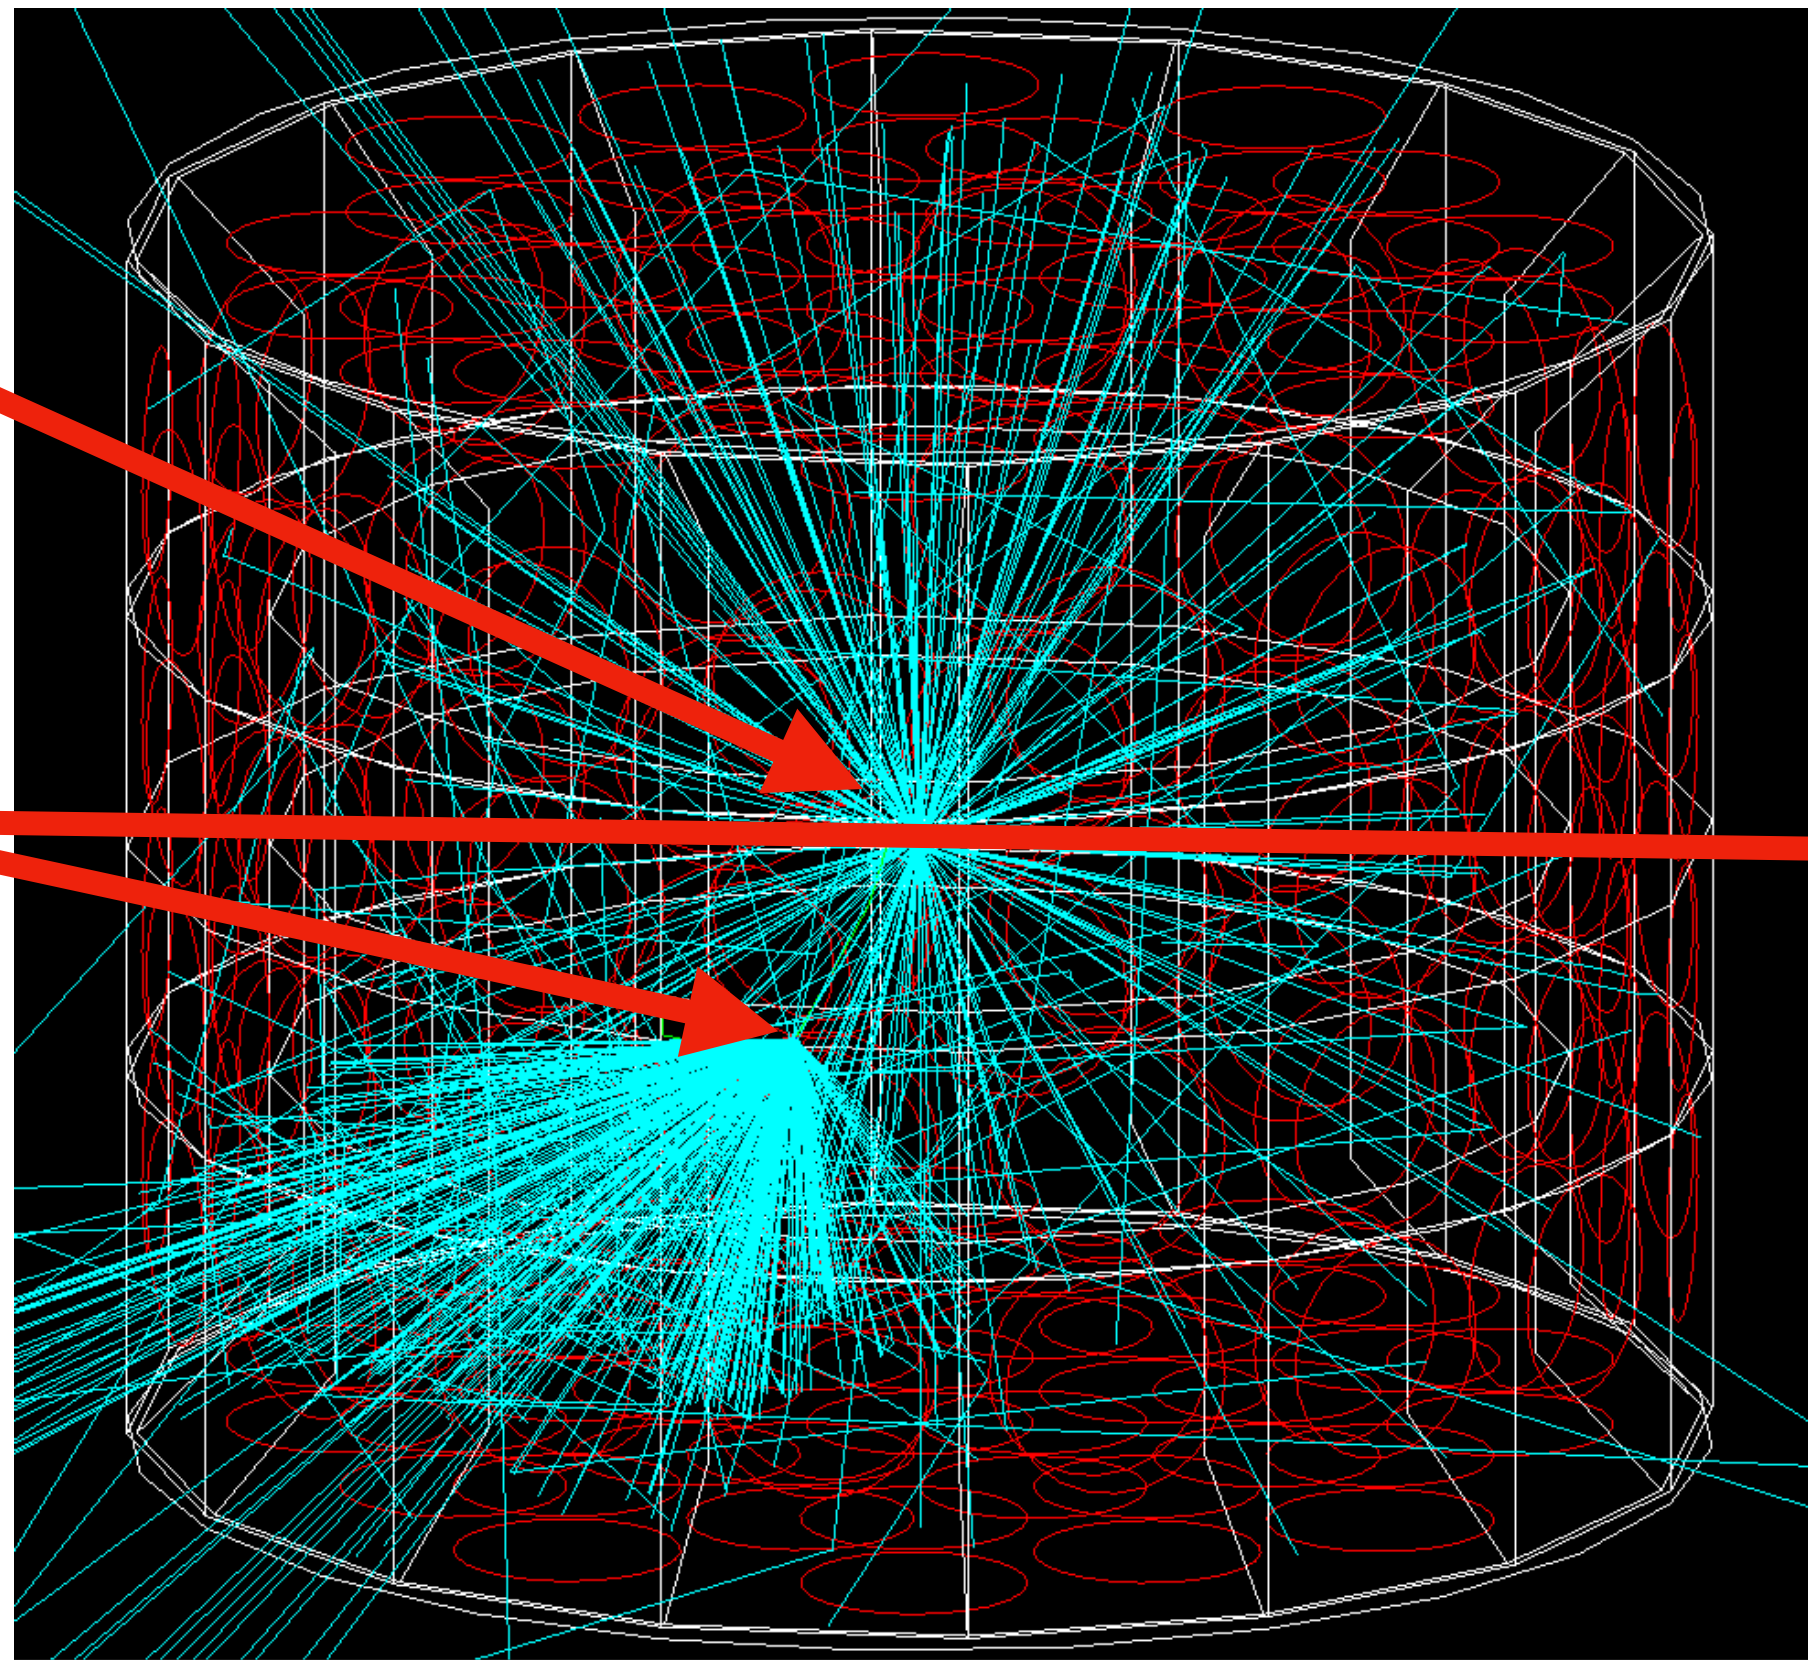

Enclosure

Lid

Scintillation: At (0,0,0) (the BGO) and 4pi direction

Cherenkov from n-capture gamma: Far from center (in the UPW) and cone-like direction

Fuensanta Vilches Bravo (Fuen)

ABOUT ME

- Born in Caravaca de la Cruz, Murcia (Spain)
- Physics Graduate, Universidad de Granada
- Future work: Quantum Field Theory
- Interests: Cat Stevens, Eric Clapton, Carole King

Luis Gil Martín

Born and raised in **Sevilla, Andalucía**

Physics graduate (Univ. de Granada)

Masters in Physics student (Univ. de Granada)

Recently started as a **PhD student in Th. Part. Physics**
(QFT, finite temperature, phase transitions)

Things I love:

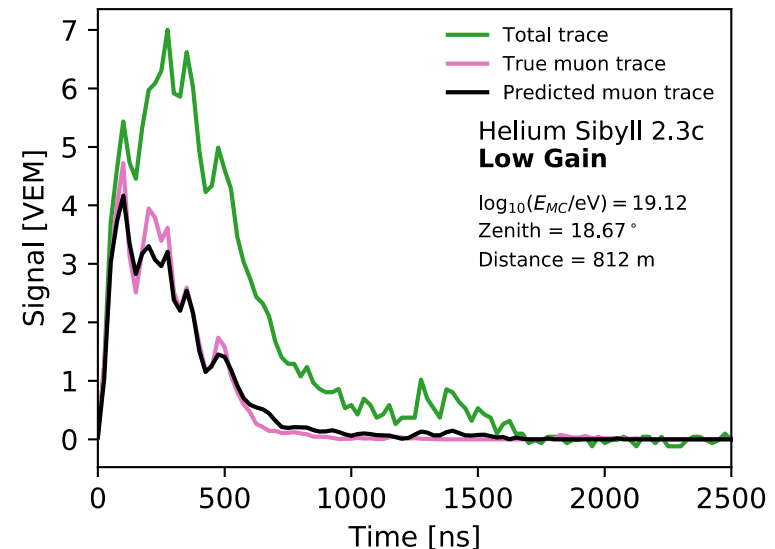

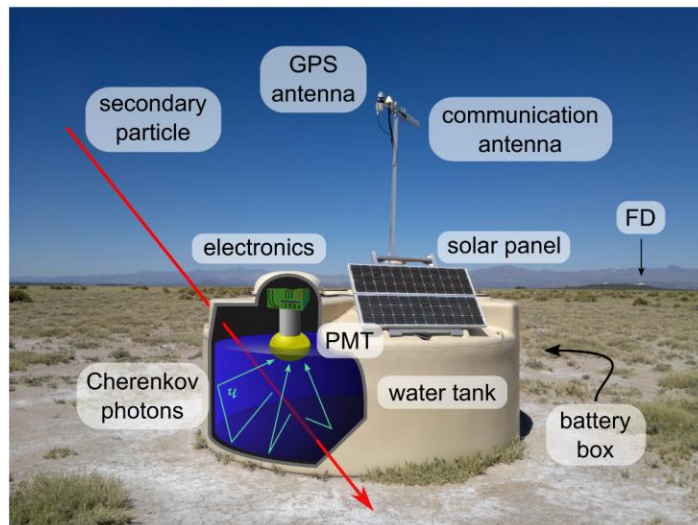

Eastern Asian cuisine, making silly faces at dogs,
showing people around the city 😊

Things I hate:

Troubleshooting computers, summer in Sevilla

Study of galactic cosmic rays with space based missions

12th IDPASC school, Granada, 18th Sept. 2023

Irene Cagnoli, Gran Sasso Science Institute (GSSI)

DAMPE - CR data analysis

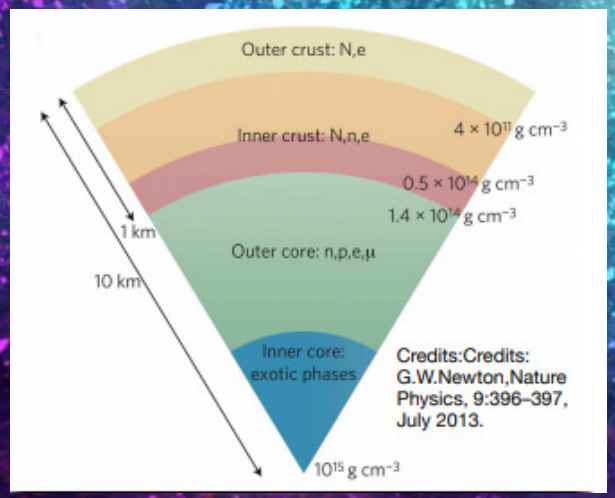

- Launched on Dec 2015
- The primary scientific goals:
 - Study of cosmic ($e^+ + e^-$) spectrum
 - Study of CR protons and nuclei
 - High energy gamma-ray astronomy
 - Indirect search for dark matter signatures
- Detection
 - e/γ : 10 GeV - 10 TeV
 - Nuclei: 50 GeV - hundreds TeV
- My project data analysis
 - The all-particle energy spectrum
 - Spectral measurements of nuclei

HERD - PSD R&D and hardware tests

- Planned launch in 2027
- Scientific goals:
 - Direct measurement of Cosmic Ray energy spectrum up to the knee region (PeV scale)
 - Electron energy spectrum up to 10 TeV
 - Gamma monitor and full sky survey up to 100 TeV
 - Indirect dark matter searches
- GSSI activities are focused on the PSD R&D, for the simulation and the hardware

Bachelor's degree in Physics in University of Granada

First year of research for the PhD in University of Granada

Future work in Quantum Field Theory and Effective Field Theories

Other interests: Any sport involving balls

Gravitational Waves and Baryogenesis from a 1st order EW phase transition

Sakharov conditions

- **Baryon number violation**
- **C and CP violation**
- **Departure from equilibrium**

Electroweak phase transitions is a source for B-violation and out of equilibrium processes...

...if we have a strong 1st order EW phase transition

Gravitational Waves produced sound waves

Baryogenesis

- ▶ Name: Pablo Estévez Alonso
- ▶ Affiliation: Reasearcher at Experimental Neutrino Group (ν UGr) & doctorate student
- ▶ Optics simulation: trigger
- ▶ Experimental optics: sensor efficiencies and improvement of light detection
- ▶ Beyond my job/studies: economy, investments, some fields of sociology and complexity of many physical systems.

- Alejandro (or Álex, as you prefer)

- 2nd year PhD student @ University of Granada
- Working on light detection R&D (hardware and software) for neutrinos LArTPCs.
- Other interests: cooking and singing.

IDPASC school

Pablo Olgoso

- Bachelor, masters and PhD in Granada. 🇪🇸
- Thesis defense in one week!! 😓
- Postdoc in Padova, Italy. ✈️ 🇮🇹
- My research is focused on **EFTs**: automatic one-loop matching, dictionaries, some model building... Ask me if you're interested!! 😊

Characterization of liquid argon detectors for next generation neutrino physics

Wallison Campanelli (LIP/FCUL)

Advisors: Dr. José Maneira (LIP), Prof. Dr. Fernando Barão (IST/LIP) Dr. Francesco Pietropaolo (CERN)

- Goals:**
- Neutrino oscillations: CP-violation (matter/antimatter asymmetry) and Neutrino mass ordering,
 - Search for nucleon decay
 - Observe neutrinos from supernovae

Scheme Horizontal Drift LAr-TPC

Experimental methods

- Intense UV laser beams
 - Radioactive source
 - Cosmic ray muons.
- Measuring charge and position we expected to obtain:**
- Electric-Field, attenuation, argon purity.

ProtoDUNE LAr-TPC
