DOSAR Workshop IV: Welcome, Goals, & Organization

Welcome to Springtime in Iowa!   (it was in the 70s last week)

Most important item – to connect to wireless:

open web browser, will see netreg login
username: jimc   pwd: ****** (see board)
reboot

reminder: upload pwd is "isu07"

Lunch options for today: we can walk to campus town (15 min) – several restaurants there
or several cafés a bit closer
or Food Court in Memorial Union (lots of students)

Dinner tonight is at Café Shi – I'll try to get a final head count by 3 or 4 pm
Will need a car to get there. I'll print some maps before we leave.

Workshop Organization

- Grid Software Development Efforts

- Outside Activities

lunch

- OSG on Windows

- Site Reports

dinner at Café Shi

- Statewide Grid Initiatives

- Future Goals

Workshop Goals – a partial and biased list

Finalize (multi-stage ?) plan to incorporate Windows machines into DOSAR/OSG (whitepaper)

MultiState (MultiCountry ?, MultiContinent ?) grid effort – should we (can we ?) develop
a recipe that would make it
easy(easier?) to bring small
sites onto OSG ?

Not exactly on the agenda, but hopefully to be discussed:

How to obtain funding ? Perhaps an MRI-like proposal from several of us ?

Wrt USATLAS, should we attempt to proactively define a "tier-3 production site" ?
