

The entropy of Holographic CFTs at large charge and angular momentum

Friday, 7 June 2024 13:00 (30 minutes)

Black holes in AdS_d (with $d \geq 4$) are always unstable at large angular momentum, and sometimes unstable at large charge. In this talk we present proposals for the end point of these instabilities. Our constructions suggest new entropy formulae for $calN = 4$ Yang Mills in the neighbourhood of extremality, and in particular on the BPS manifold.

Presenter: MINWALLA, Shiraz (Tata Institute of Fundamental Research, Mumbai, India)
