

# Collaborative Software Development with Git(Hub)

*Monday 17 July 2023 09:10 (1h 20m)*

Git is perhaps the single biggest denominator among all software developers, regardless of field or programming language. It serves not only as a version control system but as the backbone of all collaborative software development.

This session aims to be 100% hands-on and at least 90% collaborative. We will exclusively work in the browser, using GitHub and GitHub codespaces. Learn forking, branching, opening pull requests, handling merge requests, and more. GitHub account required.

**Presenter:** LIERET, Kilian (Princeton University)
