Responsible Generative AI with Microsoft Cloud

Monday 11 September 2023 09:00 (30 minutes)

In this talk, I will quickly highlight what has changed with generative AI models, and why we should stay with them even if it's early days. I will provide some examples of customer use cases, and how to run these models with confidence: secure private environments and inference infrastructure, well-trained people, and a responsible AI execution framework (not just principles). I will also discuss some current work directions, at both hardware and software levels.

Presenter: LIMANTOUR, Philippe (Microsoft France)

Session Classification: Keynote
