

Towards NLO for forward Drell-Yan production at small transverse momentum in the CGC

Monday 15 January 2024 16:15 (30 minutes)

In 2308.02449, I have performed the NLO calculation for forward virtual photon plus jet production in the hybrid dilute-dense Color Glass Condensate framework. I give an outline how this calculation can be extended to compute the inclusive forward Drell-Yan cross section at low transverse momentum.
