

Measurements of charmless three-body decays

Saturday 20 July 2024 15:45 (15 minutes)

We present an update of the analysis of B_d^0 and B_s^0 mesons to charmless three-body final states that include a K_S^0 meson. The primary goal of the analysis is to search for the as-yet unobserved decay mode $B_s^0 \rightarrow K_S^0 K^+ K^-$. In addition, the branching-fraction measurements for the set of decay modes $B_{(d,s)}^0 \rightarrow K_S^0 h^+ h'^-$ (where h and h' are each a pion or kaon), measured relative to $B_0^d \rightarrow K_S^0 \pi^+ \pi^-$, are updated. The analysis uses the data recorded by the LHCb experiment during Runs 1 and 2 of the LHC, corresponding to an integrated luminosity of 9 fb⁻¹.
