

Trilinear Higgs Couplings in the THDMS and NTHDM at e+e- colliders

Friday, 19 July 2024 20:40 (20 minutes)

Trilinear Higgs Couplings are crucial quantities for determining precisely the electroweak breaking mechanism. In the talk both Type 2 and Type 4 THDMS are analyzed and compared with respect to embedding the different current excesses at the LHC. In the talk also vacuum stability is discussed in the THDMS compared with the NTHDM. Precision requirements for measuring the trilinear couplings at LHC as well as at lepton colliders w/wo polarized beams are included.
