

# The IDEA silicon tracker

*Saturday 20 July 2024 11:36 (17 minutes)*

The IDEA detector concept has been proposed for experiments future high-energy electron-positron colliders, covering a rich physics program from the Z to WW, H and t $\bar{t}$ . The tracking system of the IDEA detector concept consists of different subsystems: a vertex detector, an inner tracker, a drift chamber and a silicon wrapper between the drift chamber and the calorimeters. In this talk the layout of the inner tracker and silicon wrapper will be described. The core of the system are multi-chips modules based on the ATLASPIX3 monolithic pixel detector. Prototypes of quad-modules and staves for the barrel region have been realized, including the cooling distribution. The performances of the individual components have been measured and a demonstrator program for the feasibility of their integration in under way.

## Alternate track

### I read the instructions above

Yes

**Authors:** Prof. ANDREAZZA, Attilio (Università degli Studi e INFN Milano (IT)); PALLA, Fabrizio (Universita & INFN Pisa (IT)); SABATINI, Fabrizio (Università degli Studi e INFN Milano (IT)); USTUNER, Fuat (The University of Edinburgh (GB)); FOX, Harald (Lancaster University (GB)); MENG, Lingxin (Lancaster University (GB)); ZANZOTTERA, Riccardo (Università degli Studi e INFN Milano (IT)); JONES, Tim (University of Liverpool (GB)); GAO, Yanyan (University of Edinburgh (GB)); BOSI, filippo (INFN Pisa)

**Presenter:** Prof. ANDREAZZA, Attilio (Università degli Studi e INFN Milano (IT))

**Session Classification:** Detectors for Future Facilities, R&D, Novel Techniques

**Track Classification:** 13. Detectors for Future Facilities, R&D, Novel Techniques
