

Exotic tetraquarks at LHCb

Saturday 20 July 2024 09:45 (15 minutes)

Since the observation of the $X(3872)$, a large number of exotic tetraquark candidates has been observed in the past 20 years. Moreover, some of these hadrons suggest an explicit exotic internal structure: charged, open-flavour, doubly heavy-flavour, full heavy-flavour states have enriched the field of exotic spectroscopy along with an increasing interest from the theory community. These states provide a unique benchmark to study QCD binding rules. In this talk, the latest results on exotic tetraquarks studies from LHCb are presented.
