

Pacific Ocean Neutrino Experiment

Towards the first detector lines

Felix Henningsen for the P-ONE Collaboration

July 18, 2023

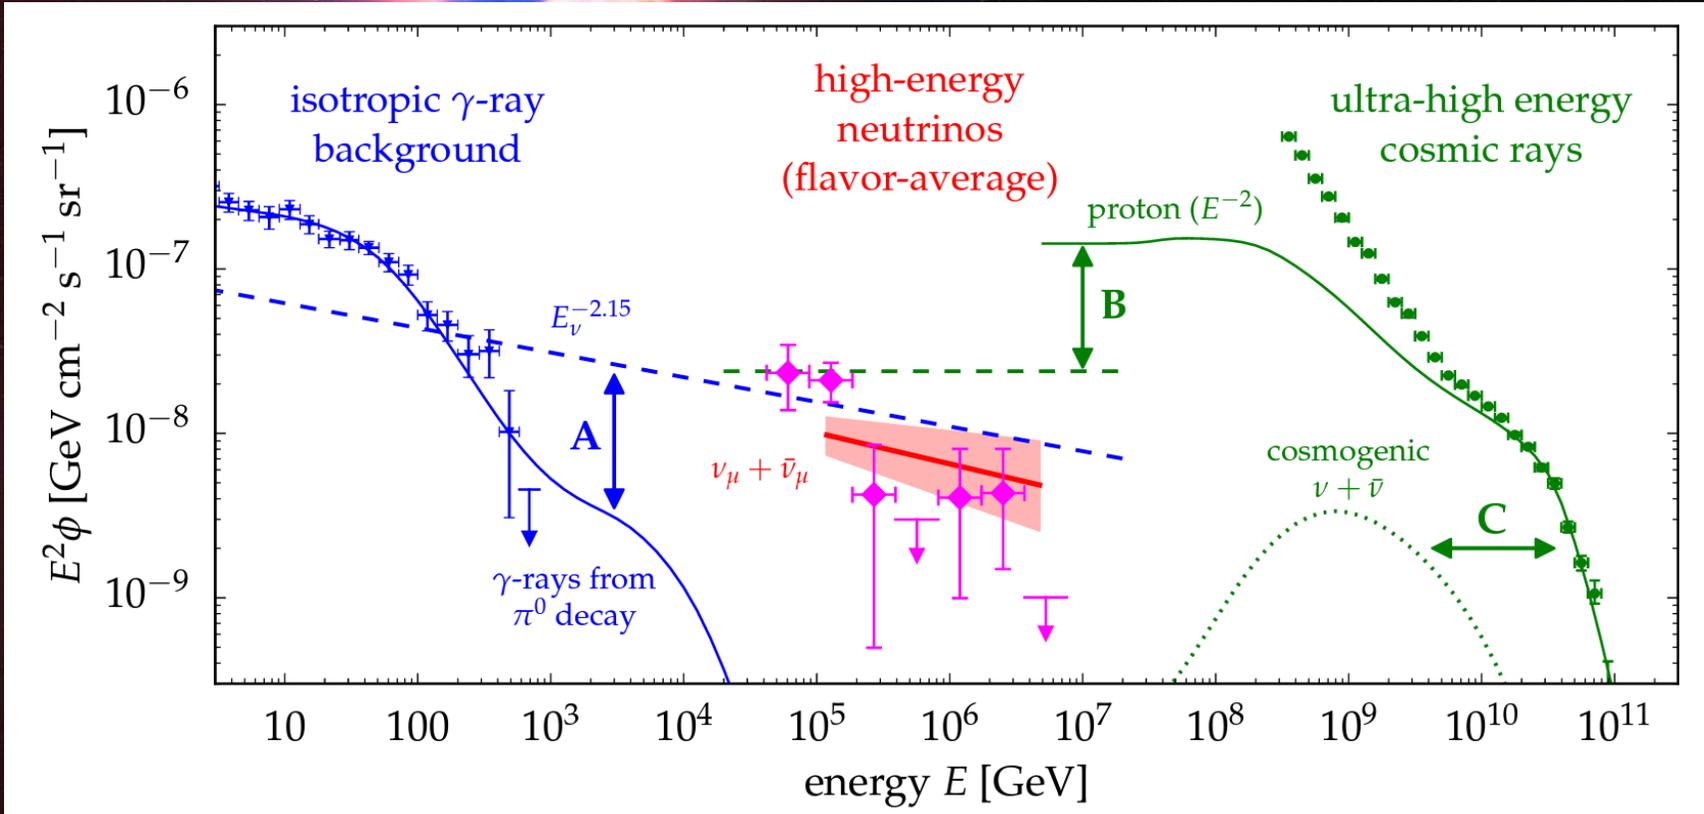

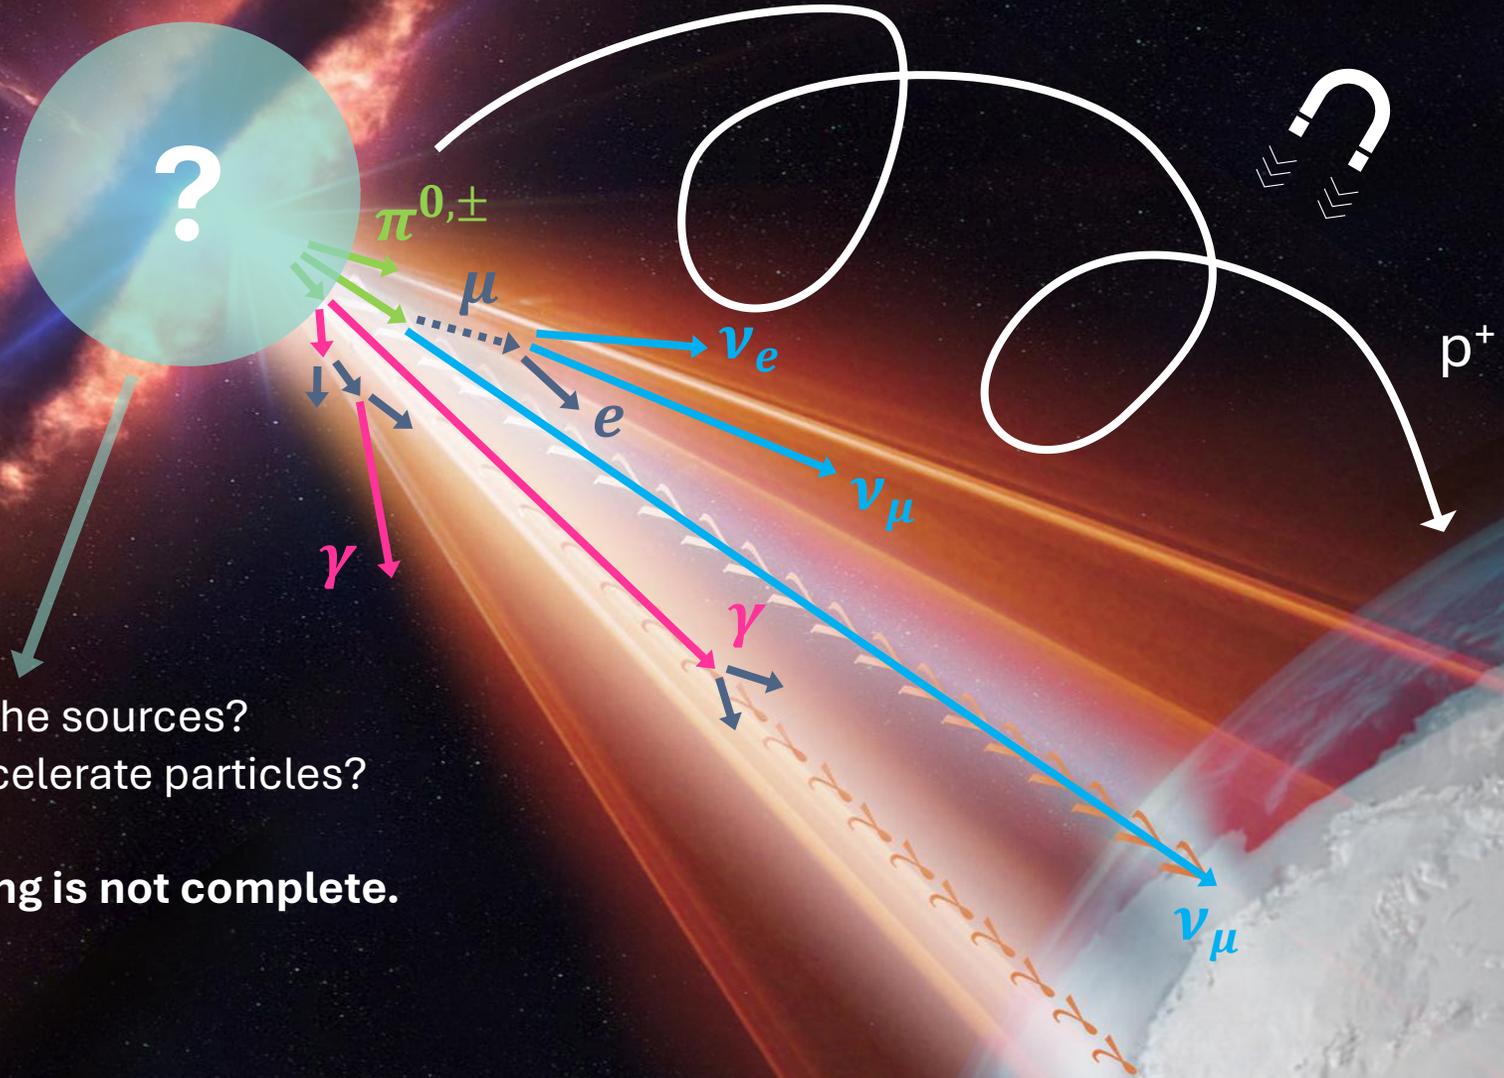

Image arXiv:1903.04334

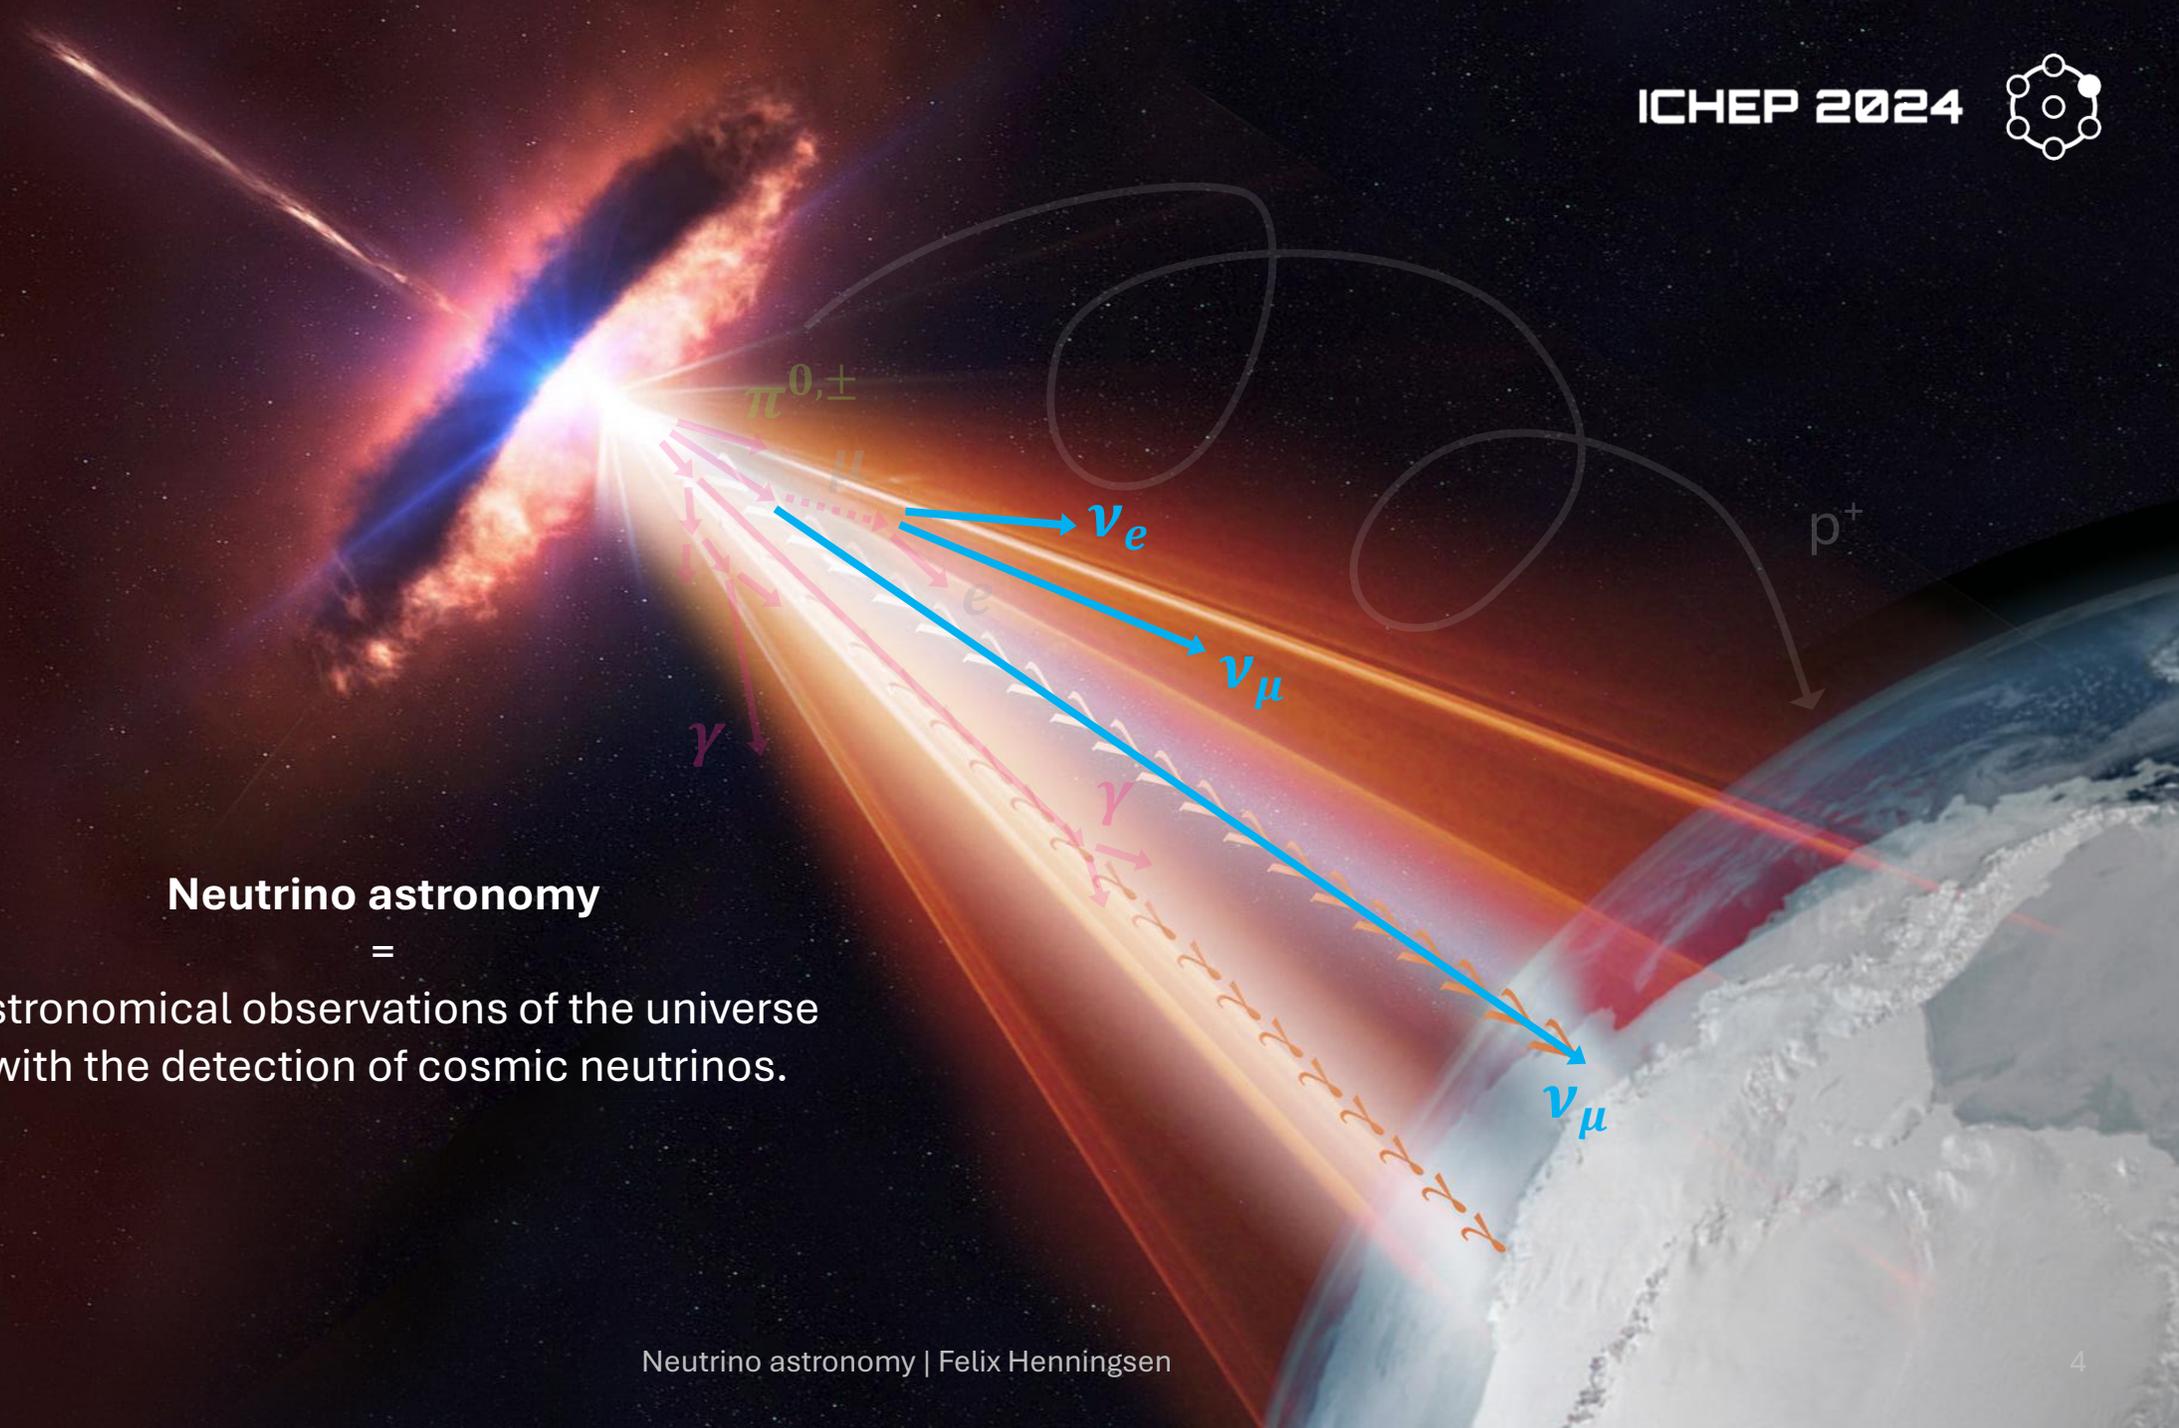

What are the sources?
How do they accelerate particles?

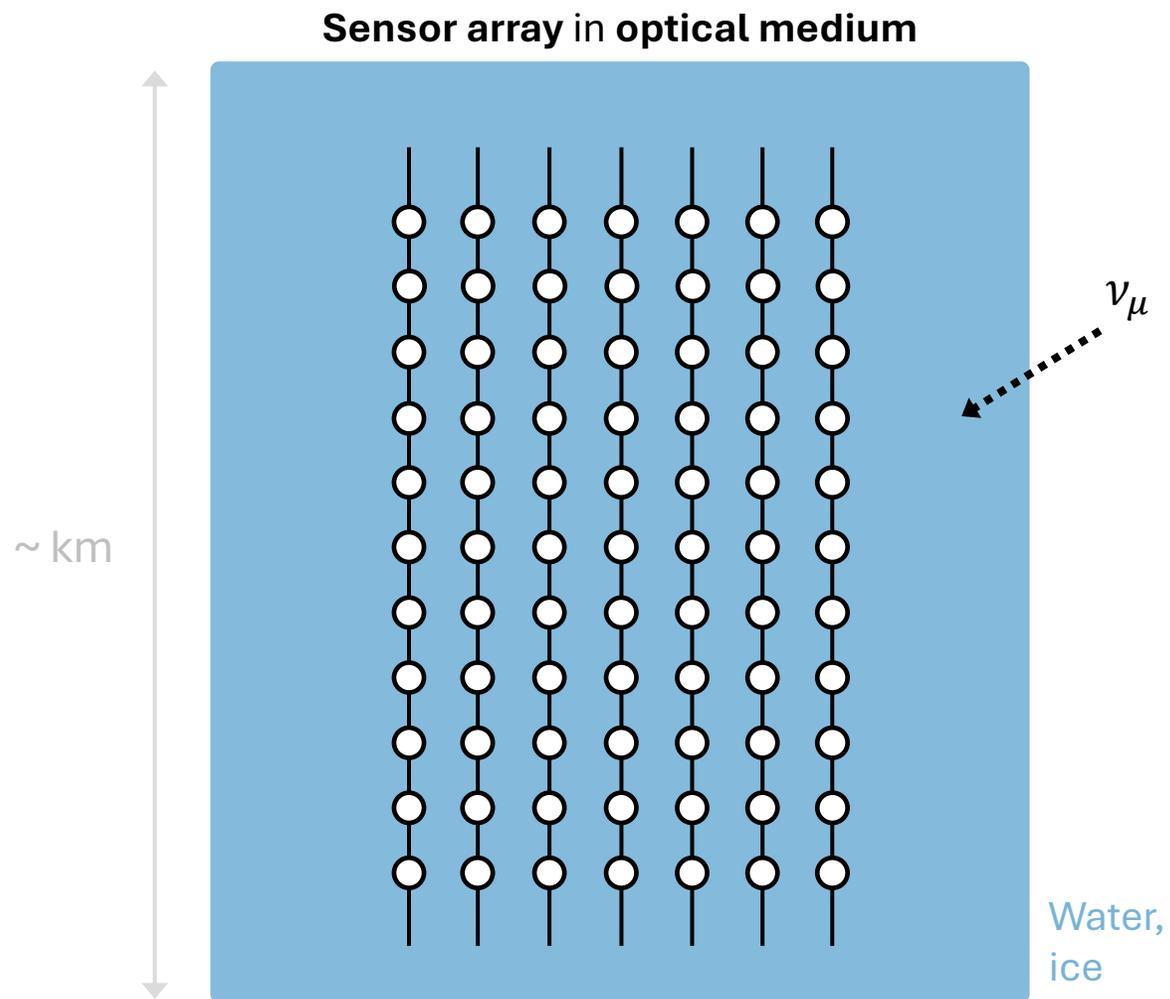

Our understanding is not complete.

Neutrino astronomy
 =
 Astronomical observations of the universe
 with the detection of cosmic neutrinos.

Tau identification

Summary

Excellent progression of the P-ONE project

First goal: Test deployment / detector concept and operation

- Full, detailed in-situ calibration and measurement of backgrounds
- Ultra-fast, high-bandwidth detector readout
- Particle identification
- Study atmospheric muons and neutrinos

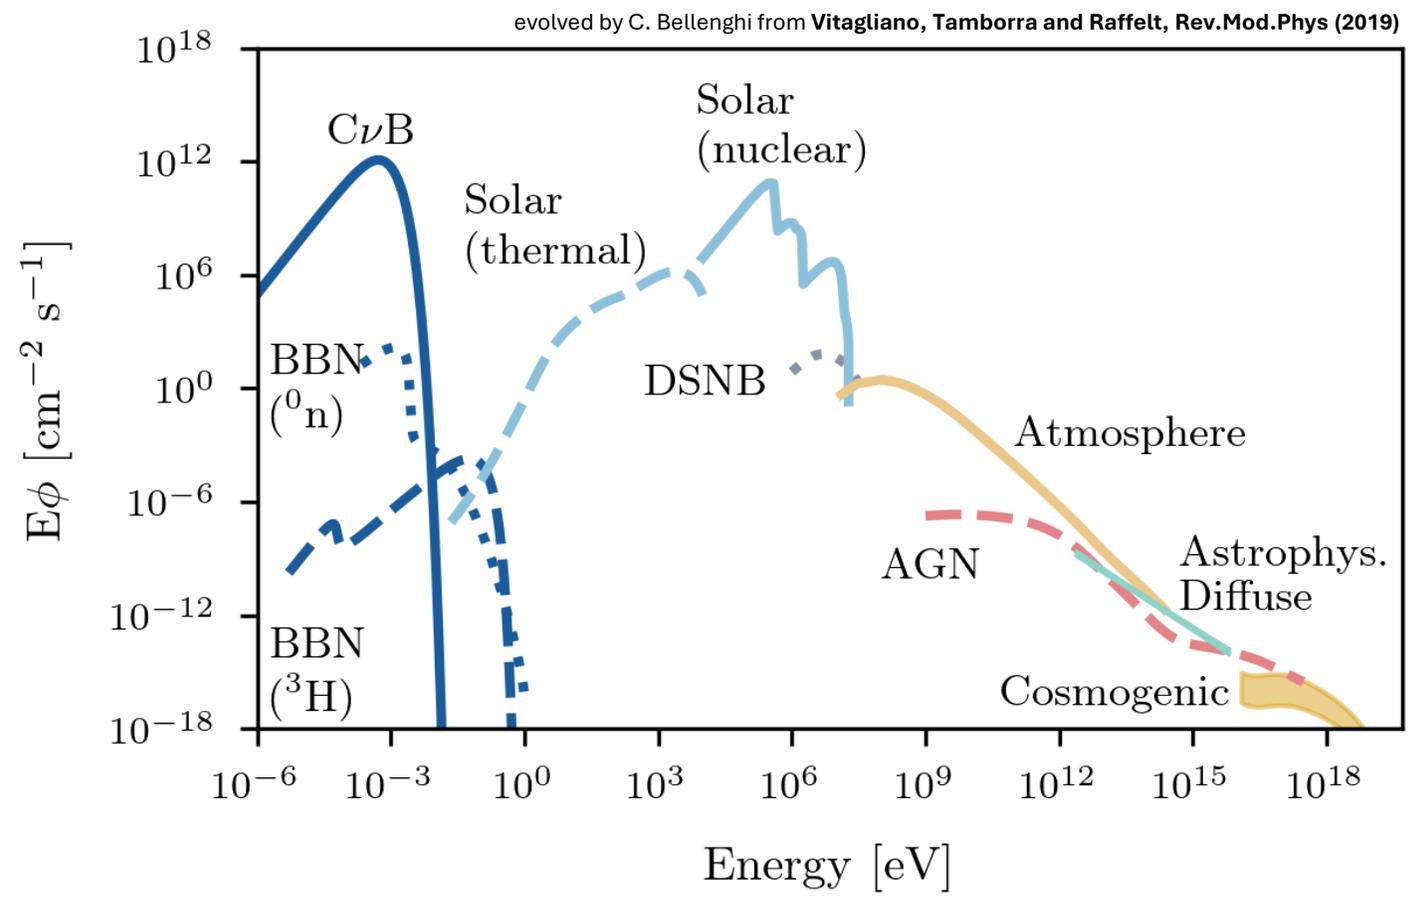

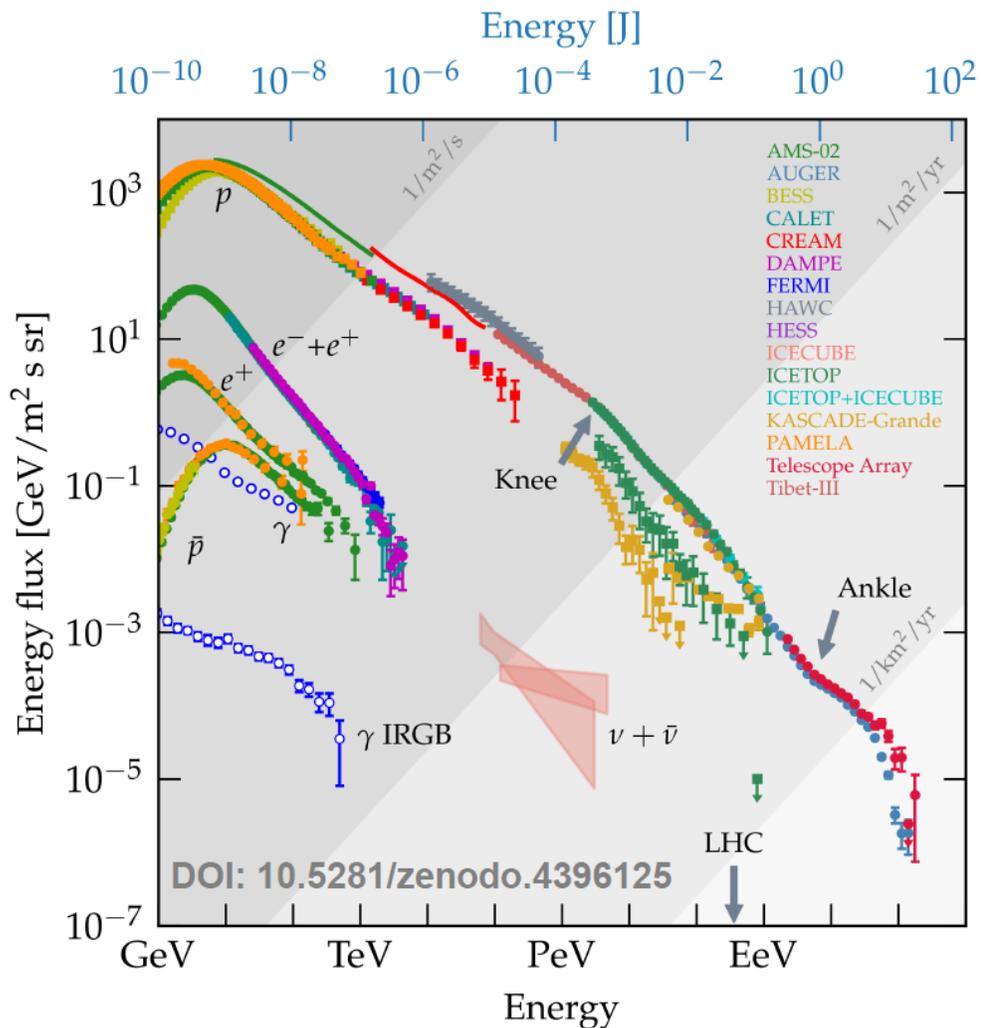

P-ONE-1 is a crucial milestone for a future km³ array in the Pacific Ocean
