

Establishment of a European RAISE network

Gulllaume Houzeaux with contributions
from all the partners

Establishment of a European RAISE network

Task 6.2 Establishment of a European RAISE network <Leader: BSC> <M1-M36>

Contributors: FZJ, UOI, CYI, BSC, CERN, CERFACS, RTU, FM Outputs: D6.5, D6.6, D6.7

The task contributors represent the responsible institutions per participating country. In this task, they establish a European RAISE network by implementing country-dependent access and contact nodes. They connect the activities of RAISE to those of their network, national, European and international. That is, FZJ establishes connections, e.g., to GCS, HAICU, and IRT in Germany as well as to PRACE together with BSC at European level. UOI connects as a hub to the Nordic countries with NeiC and COST Action CA18203, and together with RTU to EOSC-NORDIC. CYI acts as hub for the EM, has strong links with SESAME, with the Balkans through NI4OS-Europe, as well as links with the oil and gas industry (the Delphi consortium, see Sec. 4.2.2). It extends its reach to other industries through the SimeEA ERA Chair project. RTU acts as a hub for the Baltic Region through SESAME Net. RWTH employs its channels to Gauss Alliance and HPC.NRW. CERN connects to INFN, Siemens, and E4 Computer Engineering. CERFACS establishes connections with academics (ISAE-Supaero, IRT, ONERA) and industrial partners (Airbus, CNES) among other within the interdisciplinary institute ANITI and the Helios multi-laboratory workgroup. FM exploits its industrial partner network. Partners involved in other CoEs or European projects establish corresponding connections, i.e., to EXCELLERAT, POP, EoCoE-II, EPI, DEEP, EMME- CARE, etc. (see. Sec. 1.3.3, Tab. 4). Furthermore, connections to ETP4HPC are established.

D6.5, D6.6, D6.7 (BSC) Periodically updated documents: (i) listing RAISE's connected networks, their user groups, contact persons and entry points; (ii) evaluating the potential to include new communities; (iii) describing information and (service) request transfer in RAISE's network

The network is *not* an objective perse. It's a mean to attain the following activities:

- Sharing of repositories
- Establishment of common databases
- Organization of courses, trainings, workshops, hackathons, etc.
- To increase number of participants at events organized by RAISE
- Definition of use cases or standards
- Recruitment of new stakeholders
- Integration of RAISE services on existing platforms
- Delivery of RAISE derived software to a specific community
- To push the adoption of RAISE tools
- To enhance the development of scalable AI using parallel computing resources
- To propose services for commercial users
- To exploit synergies in the provision of services, education, and knowledge and technology transfer in general
- To create awareness in a broader audience
- To participate in official committees
- To provide common scientific/technological solutions
- To carry out scientific collaborations

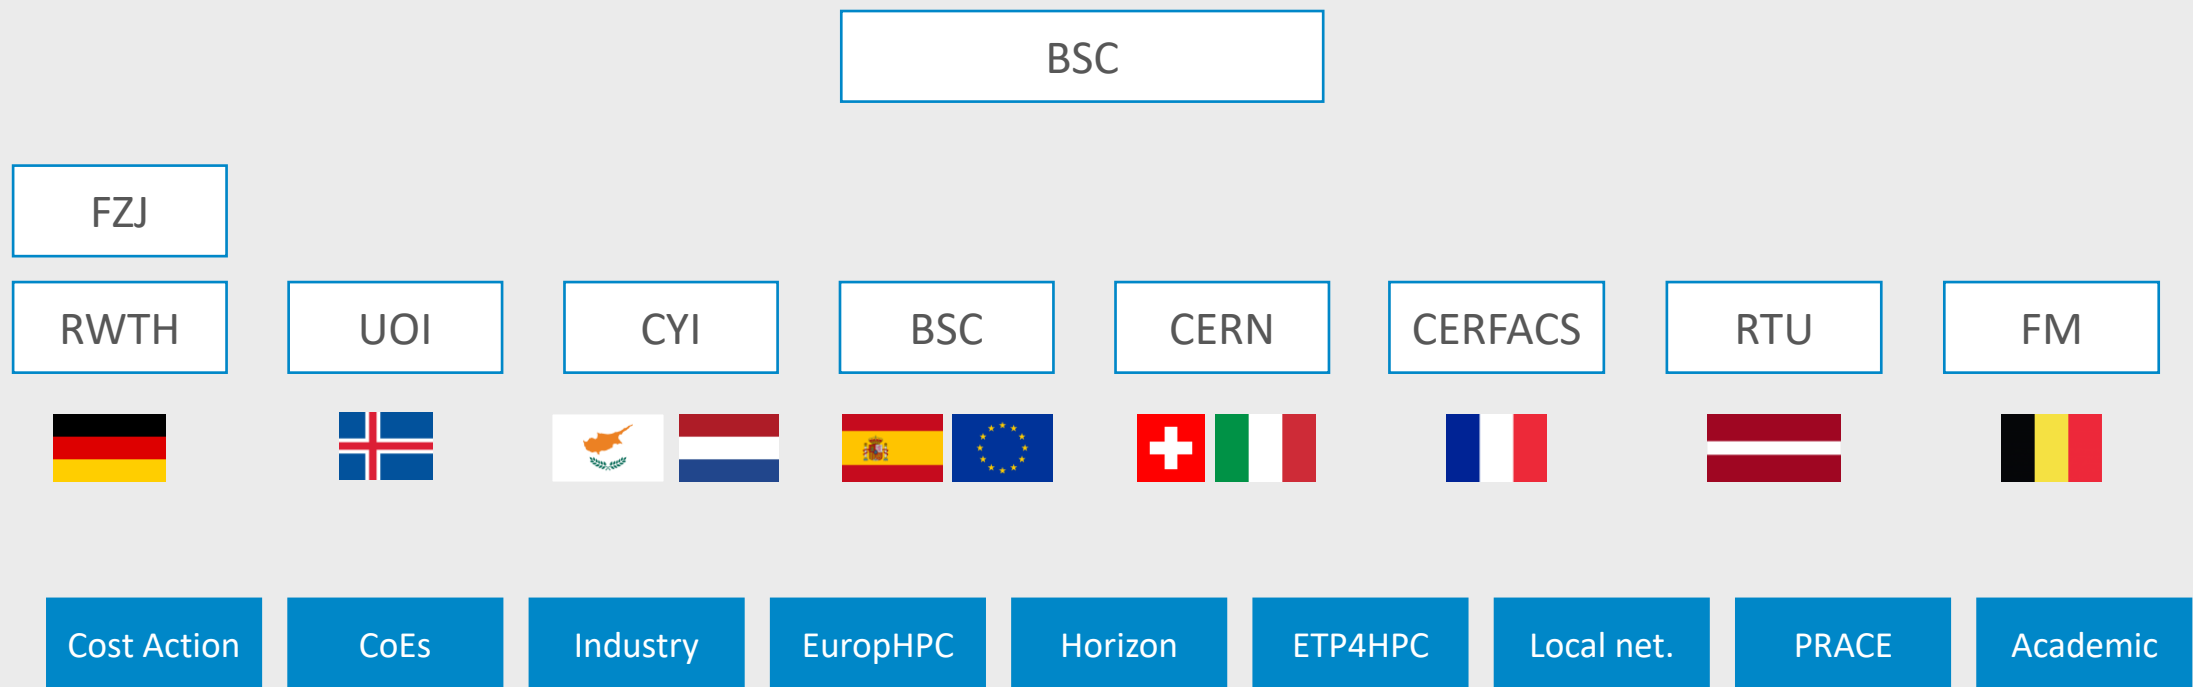

Networking is thus any meeting before activities start

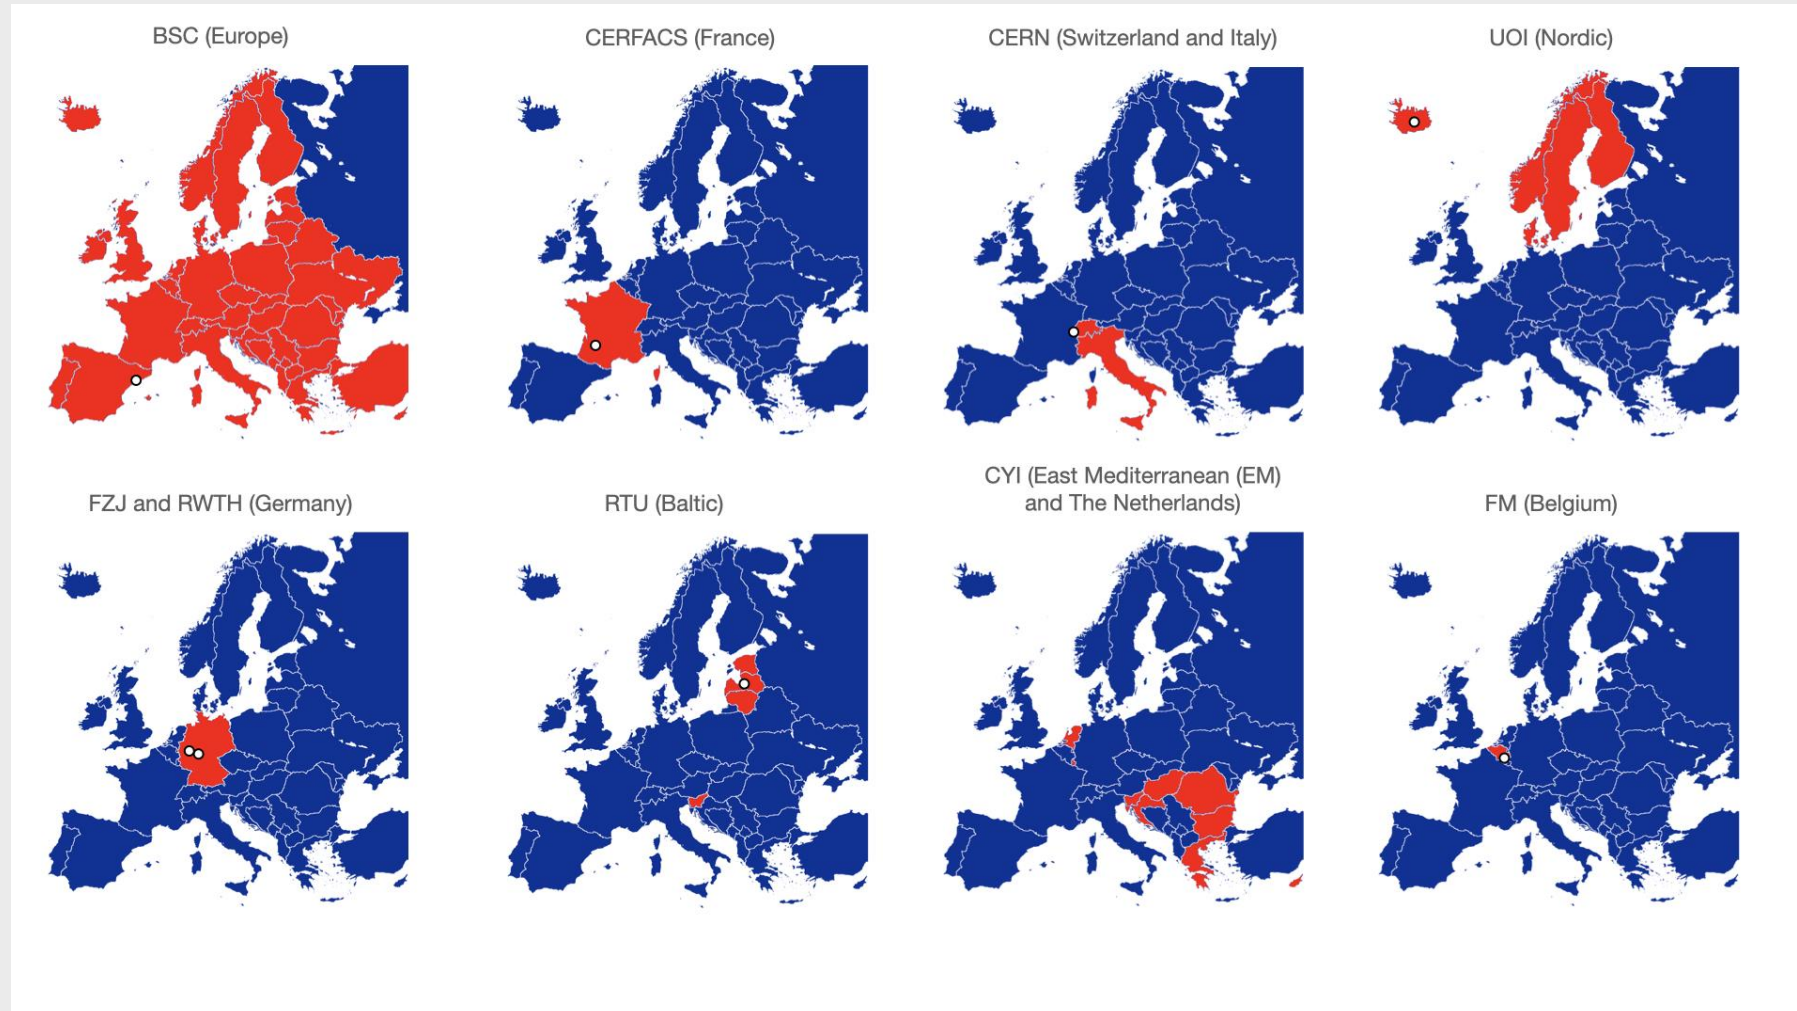

Activities then go to: dissemination, networking, etc.

Establishment of a European RAISE network

The task contributors represent the responsible institutions per participating country. In this task, they establish a European RAISE network by implementing country-dependent access and contact nodes.

Table 1: Stakeholder identification and responsible

What we initially asked you to do?

Establishment of a European RAISE network

To fill in a template to register your interactions

Name of Institution:	CHEESE
RAISE REGION:	EU
Register of the interaction	Include reference to all the minutes of the meeting (i.e. RAISE_MoM_Stakeholder_YMMMDD)
Type of organization	Center of Excellence
Contact persons	Dr Arnau Folch, Dr. Piero Lanucara
Web page	https://cheese-coe.eu/
Entry points (through LinkedIn, personal, joint R&D projects, RAISE partner is member of the organization, ...)	BSC is CHEESE leading partner
Stakeholder community (hydrodynamics, manufacturing, physics, turbomachinery, and aerospace. In case of another please specify)	Solid earth
Information and (service) request transfer in RAISE network (which interest does the stakeholder have that allows RAISE to establish a synergy?)	ML techniques applied to new cutting edge numerical simulations, including mesh generation, etc.
Main outcomes of the discussion and next planned actions	

And asked you the following additional info in the deliverables:

1.1 France

1.1.1 Status of the region

1.1.2 Stakeholder interactions

1.1.2.1 Contacted stakeholders (M6)

1.1.2.2 Contacted stakeholders (M18)

1.1.3 Review and opportunities

We understood the interaction Table was a bit...

So now what do we ask for?

Establishment of a European RAISE network

To fill in a simple Excel sheet to register your interactions

Establishment of a European RAISE network

The results are organized and visualized on a webpage

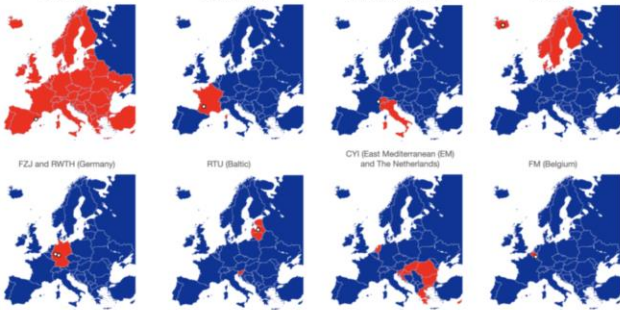

T6.2 Establishment of a European RAISE network

The task contributors represent the responsible institutions per participating country. In this task, they establish a European AISee network by implementing country-dependent access and contact nodes. They connect the activities of RAISE to those of their network, national, European and international. That is, FZJ establishes connections, e.g., to GCS, HAICU, and IRT in Germany as well as to PRACE together with BSC at European level. UOI connects as a hub to the Nordic countries with NeIC and COST Action CA18203, and together with RTU to EOSC-NORDIC. CYI acts as hub for the EM, has strong links with SESAME, with the Balkans through NI405-Europe, as well as links with the oil and gas industry (the Delphi consortium, see Sec. 4.2.2). It extends its reach to other industries through the SimEA ERA Chair project. RTU acts as a hub for the Baltic Region through SESAME Net. RWTH employs its channels to Gauss Alliance and HPC.NRW. CERN connects to INFN, Siemens, and E4 Computer Engineering. CERFACS establishes connections with academics (ISAE-Supaero, IRT, ONERA) and industrial partners (AIRBUS, CNES, Safran) among other within the interdisciplinary institute ANITI and the Helios multi-laboratory workgroup. FM exploits its industrial partner network. Partners involved in other CoEs or European projects establish corresponding connections, i.e., to EXCELLERAT, POP, EoCoE-II, EPI, DEEP, EMME-CARE, etc. (see. Sec. 1.3.3, Tab. 4). Furthermore, connections to ETP4HPC are established.

Task 6.2 aims at developing a European RAISE Network to: raise awareness on technical developments and services implemented in the project; enhance their impact; dynamize the use through Europe of Artificial Intelligence (AI) in an High-Performance Computing (HPC) context. Connecting smaller (5Tier-2) HPC centers, local academic institutions, industry, and SMEs to RAISE's developments and expertise will allow to uncover new user communities and to provide corresponding service and education. Hence, the CoE RAISE will act as an enabler for AI-based Exascale technologies. RAISE partners are in charge of a given region, defined according to their geographical locations and previous contacts and collaborations. In this page, visualize our activities in creating this European network by selecting a category and then a corresponding item.

To participate in official committees region

FM (BE):

- Activity: To participate in official committees
- Institution: Vlaams Supercomputer Center (VSC)
- Community: HPC
- Period: M6
- Description: *Flanders Make is represented in the User Committee of the Vlaams Supercomputer Center (VSC), its advisory board to consolidate user requirements and improve VSC services (see <https://www.vscentrum.be/org>).*

BSC (ES):

- Activity: To participate in official committees
- Institution: FocusCoE / HPC3
- Community: HPC, CoE applications
- Period: M6
- Description: *Since 11/2020, the CoE RAISE coordinator participates to the HPC3 meetings. The minutes are available on the RAISE workspace of the BSCW server40. HPC3 has the following objectives: (i) identify European HPC CoEs common interests, (ii) represent the CoEs in the current European HPC landscape, and (iii) be a representative body for the European HPC applications. That is, the creation of synergies is implicitly given*

FZJ & BSC (DE, ES):

- Activity: To participate in official committees
- Institution: PARCFD
- Community: HPC
- Period: M18
- Description: *Andreas Lintermann and Guillaume Houzeaux now members of International Advisory Committee. The objective is to push the adoption of AI in the conference.*

FM (BE):

- Activity: To create awareness in a broader audience
- Institution: Industrial manufacturing companies
- Community: nan
- Period: M18
- Description: *During Q1 2022, a newsletter was sent around to the FM Industrial Network, consisting of industrial manufacturing companies with more than 150 members. The content of the news article was mainly focussed on the contribution of FM to the RAISE project regarding defect-free metal additive manufacturing. Tangible outputs related to other use-cases relevant to the manufacturing industry are still limited in this phase of the project. As a result of this newsletter, one member of the network requested to be kept informed about further results obtained. Melotte is located in Belgium and focuses on 3D metal printing and high precision manufacturing. Melotte will be contacted during a later phase in the project when tangible results from task 4.3 are available. Other companies in the 3D manufacturing business and member of the FM industrial network, e.g., Materialise, Layerwise, and ESMA, have not responded to the newsletter.*
