

# FLAG

FLUKA-ACTS-Geant4

**Anton Taleiko**

Computer science

University of Helsinki

Supervision: Mika Huhtinen, Andreas Salzburger (CERN/EP-ADP-OS)

Geant4 → ACTS → FLUKA

# Motivation

- **Different kinds of simulators**, such as particle and radiation simulators, **are used in high energy physics** for different purposes.
- **Particle detectors (real) wear out** because of the **radiation** that is created when the detectors are used at high efficiency for a long time.
- The **efficiency goes down** and the detectors have to be replaced.
- With **radiation estimates** it is possible to estimate for **how long the detectors can be used**.

Task

pyg4ometry

Geant4: Detector simulation for physics

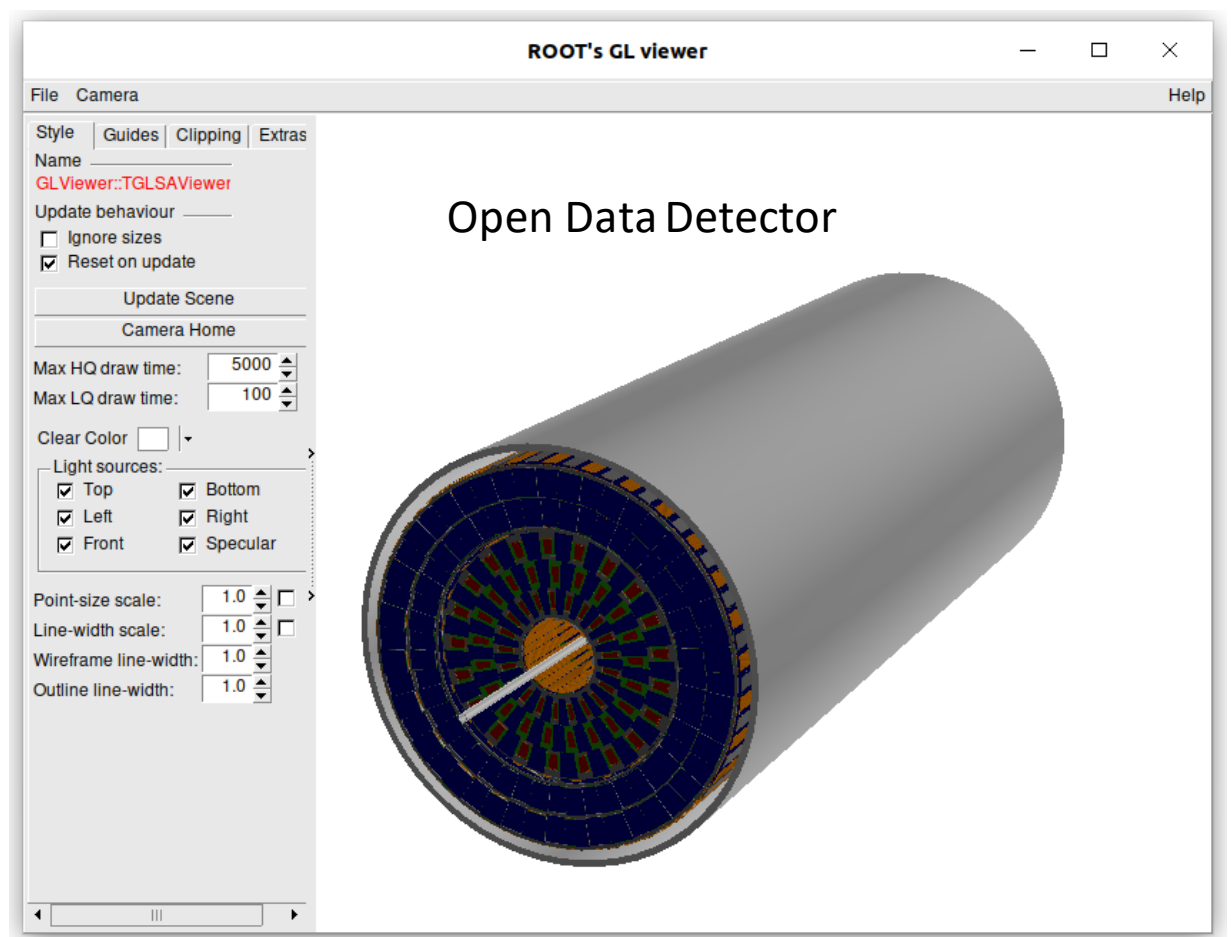

ACTS: Tracking software toolkit

FLUKA: Used for radiation studies

They use different input/output formats

# Complications

- All programs come with different file formats
- The original detector structure is too complex for the software to handle.
- The geometry needs to be simplified.

Geant4 → ACTS → FLUKA

# Pipeline

Open Data Detector

Part 2

ACTS (simplifier)

Geant4

Part 1

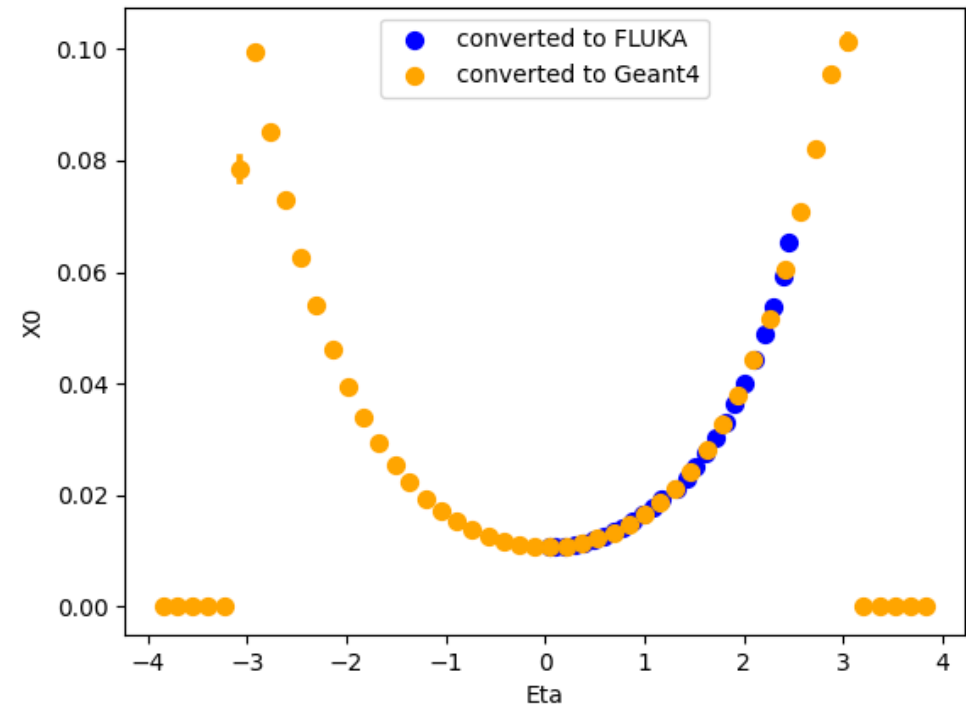

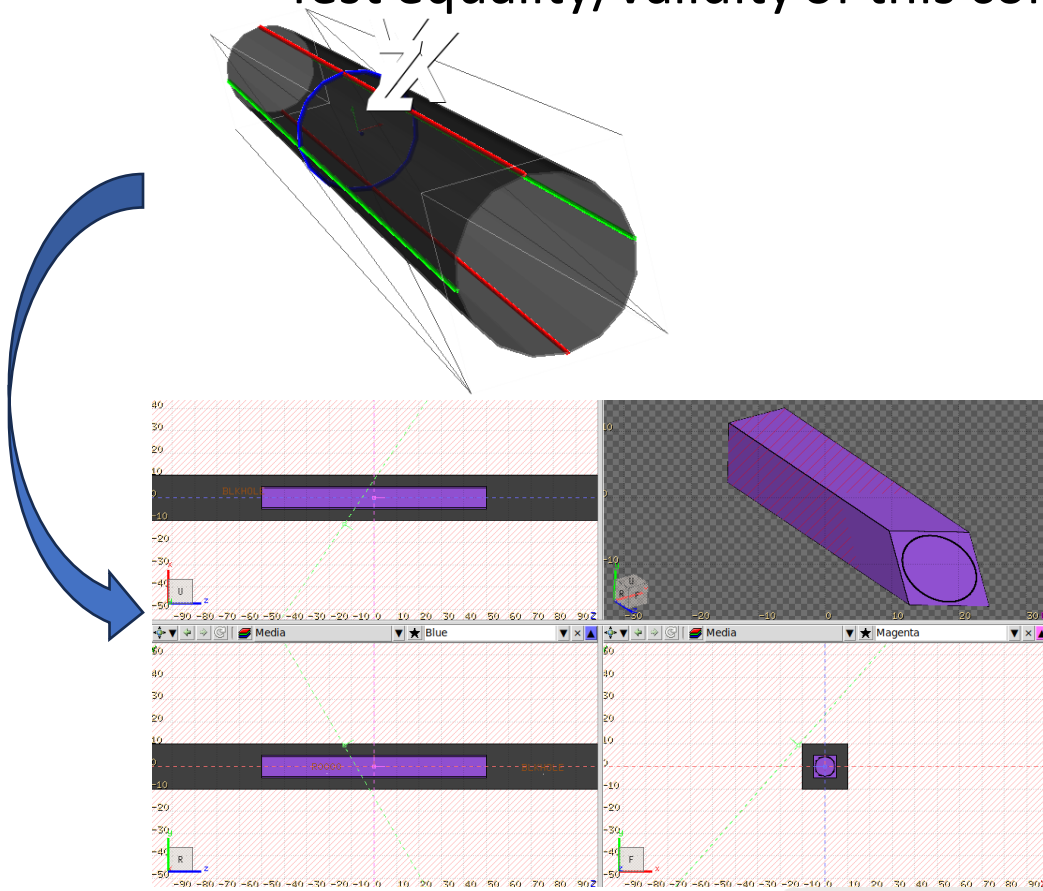

pyg4ometry

FLUKA

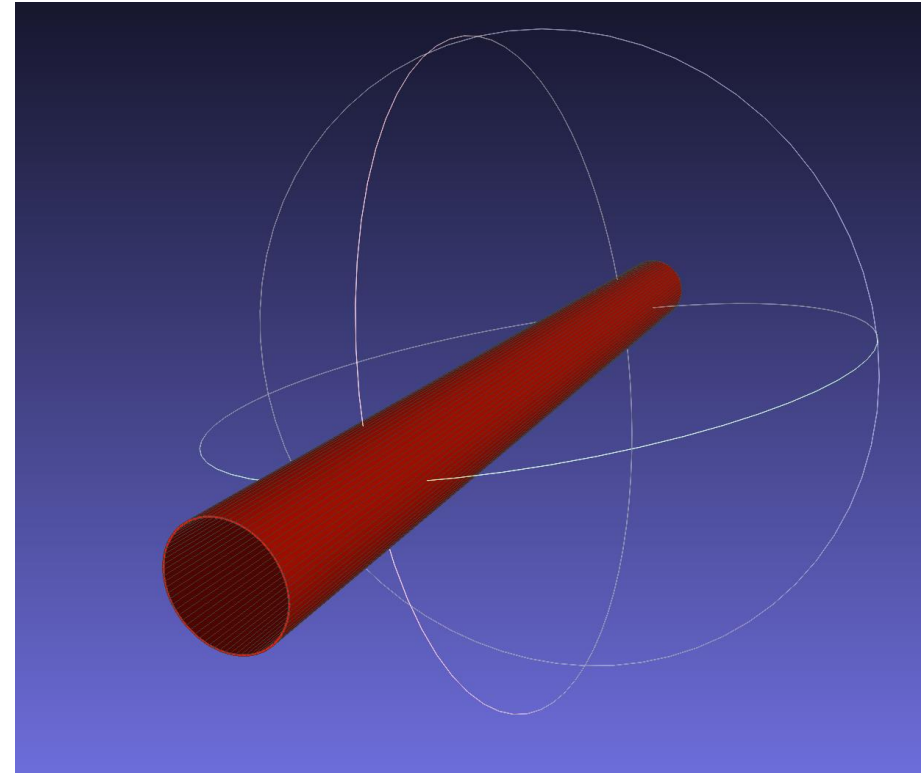

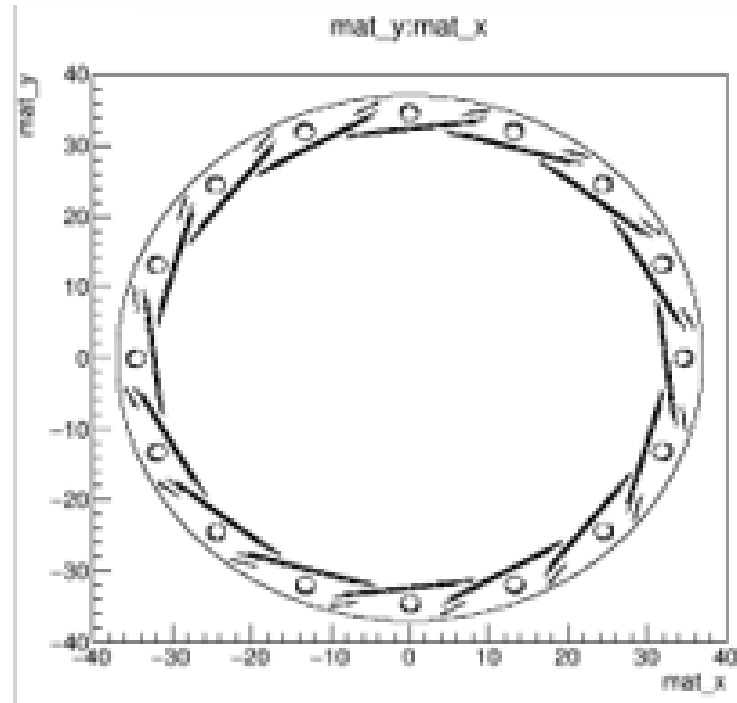

# Part 1 – Geometry Conversion

- Convert a (set of) cylinder(s) from pyg4ometry into Geant4 and FLUKA
- Test equality/validity of this conversion by comparing material budget

# Part 2 – Geometry Simplification

Material recording

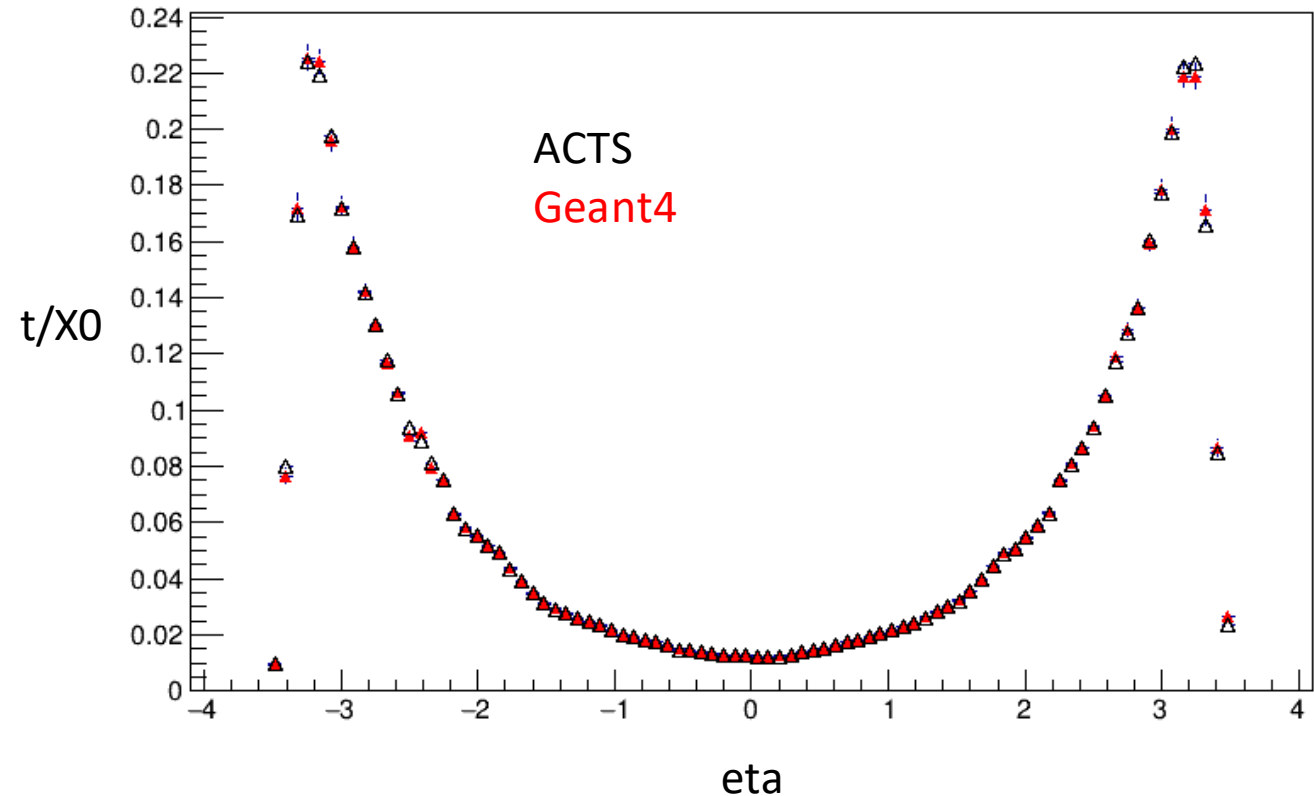

Material mapping

# Status & Outlook

- Established geometry conversion from pyg4ometry into Geant4/FLUKA
  - Yields same amount of material
  - Still issue with more than 6 layers in FLUKA
- Created a pipeline to use ACTS material mapping to perform the geometry simplification for FLUKA
  - Validated correct transcript of material amount
  - Missing back translation into pyg4ometry
