Life Sciences (ELIXIR) – user requirements

Ugis Sarkans, European Bioinformatics Institute

Abstract

In the first part of the presentation I will cover the wider life sciences community perspective – what projects exist that try to bring together practitioners of various domains of life sciences, and the place of security-related aspects, i.e., user authentication, authorization and accounting in those efforts.

In the second part I will concentrate on various access rights scenarios that we deal with at the EBI in our work on biomolecular data resources.
