

Existing infrastructures

- **Trust** is needed, both for **tokens** and **attributes**
 - IGTF is the source of trust for many existing projects
 - IdP accreditation a key aspect
- Different **Levels of Assurance** is important
 - Implementation not trivial
- **Traceability** across different tokens key is critical
- Aim at **global (common?) authentication management system**
 - Global scope **interoperability** is essential
 - **Certificate** and **Security Token services** important
 - Significant work ongoing
- Is a **better coordination** between ongoing efforts needed?
