

CCE Measurements on Irradiated HPK-ATLAS07 n-on-p Sensors

Tuesday 24 May 2011 15:20 (20 minutes)

A set of strip sensors has been irradiated with pions and protons in a mixed irradiation campaign. The results of CCE measurements after each irradiation step will be presented.

In another study three sensors were irradiated with protons in Karlsruhe with a fluence of $1.1E15 \text{ n}_{\text{eq}}/\text{cm}^2$. The difference in charge collection measurements will be compared when sensors were annealed at room temperature, 40°C and 60°C.
